Cardiovascular disease now ranks as the world’s top cause of death, causing one third of all deaths globally. Heart disease can no longer be seen as the problem of overworked, overweight middle-aged men in developed countries. In today’s world, women and children too are at risk. Already, 75% of all CVD deaths occur in the poorer regions of the world, and this is likely to increase in the future.

Following on from the success of WHO’s Tobacco Atlas, the Atlas of Heart Disease and Stroke addresses this most urgent health issue in a ground-breaking, clear and accessible format, designed to inform UN agencies, government officials, politicians, and other decision makers, the media, researchers, and the general public, as well as provide an essential tool for the health professional.

The Atlas of Heart Disease and Stroke charts in full-colour maps and graphics the wide range of issues relating to this global epidemic.

**Topics include:**
- Risk factors: high blood pressure, tobacco use, inactivity, obesity, lipids, diabetes
- Women, childhood and youth
- The global burden of CVD, including the economic burden
- Research
- Prevention
- Policies and legislation
- Treatment
- Predictions

“Heart disease and stroke rob too many people of precious years of quality life. This one-of-a-kind atlas serves as a key resource for those on the frontlines of health”
— Dr Julie Gerberding, Director, CDC

“We applaud the authors for producing such a comprehensive document in such a user-friendly format”
— World Heart Federation
Table of contents

**Foreword**

**Preface**

**Part one: Cardiovascular disease**
Types of cardiovascular disease
Rheumatic fever and rheumatic heart disease

**Part two: Risk factors**
Risk factors
Risk factors start in childhood and youth
Risk factor: blood pressure
Risk factor: lipids
Risk factor: tobacco
Risk factor: physical inactivity
Risk factor: obesity
Risk factor: diabetes
Risk factor: socioeconomic status
Risk factor: women: a special case?

**Part three: The burden**
Global burden of coronary heart disease
Deaths from coronary heart disease
Global burden of stroke
Deaths from stroke
Economic costs

**Part four: Action**
Research
Organizations
Prevention: personal choices and actions
Prevention: population and systems approaches
Health education
Policies and legislation
Treatment

**Part five: The future and the past**
The future
Milestones in knowledge of heart and vascular disorders
BCE-1852
1856-1967
1969-2004

**Part six: World tables**
World data tables
Glossary
