Malignant neoplasms of lymphoid, haematopoietic and related tissue
(C81–C96)

Note: The terms used in categories C82–C85 for non-Hodgkin's lymphomas are originally those of the Working Formulation, which attempted to find common ground among several major classification schemes. These terms in these schemes are not given in the Tabular List but appear in the Alphabetical Index; exact equivalence with the terms appearing in the Tabular List is not always possible. With the 2009 version of ICD-10 it was attempted to adopt this block to the current WHO classification of haematologic neoplasm. This, however, was possible only to a certain degree, in order not to break completely with the existing structure of ICD-10.
