**Malignant neoplasms of lymphoid, haematopoietic and related tissue (C81–C96)**

**Note:** The terms used in categories C82–C85 for non-Hodgkin's lymphomas are originally those of the Working Formulation, which attempted to find common ground among several major classification schemes. With the 2009 version of ICD-10 it was attempted to adopt this block to the current WHO classification of haematologic neoplasm. This, however, was possible only to a certain degree, in order not to break completely with the existing structure of ICD-10.

**Includes:** morphology codes M959-M994 with behaviour code /3

**Use additional code (C78-C79), if desired, to code additional affection of organ.

**Excludes:** secondary and unspecified neoplasm of lymph nodes (C77–)
