Emergency care systems for universal health coverage: ensuring timely care for the acutely ill and injured

Draft resolution proposed by Argentina, Ecuador, Eswatini, Ethiopia, Israel, the European Union and its Member States and the United States of America

The Seventy-second World Health Assembly,

PP1 Having considered the report on emergency care systems for universal health coverage: ensuring timely care for the acutely ill and injured;¹

PP2 Noting the importance of the organization of the health system as a whole, including by distinguishing between elective services and care, non-elective services and care, and emergency services and care in order to address the health needs of populations in a sustainable, effective and appropriate manner;

PP3 Recognizing that many proven health interventions are time-dependent and that emergency care is an integrated platform for delivering accessible, quality time-sensitive health care services for acute illness and injury across the life course;

PP4 Emphasizing that timeliness is an essential component of quality, and that millions of deaths and long-term disabilities from injuries, infections, mental disorders and other mental health conditions, acute exacerbations of noncommunicable diseases, acute complications of pregnancy, and other emergency conditions could be prevented each year if emergency care services exist and patients reach them in time;

PP5 Noting that injury alone accounts for nearly 5 million deaths per year and that road traffic injury is the top killer of all those in the age group of 5–29 years;²

PP6 Noting also that emergency care is an essential part of health service delivery in health systems, and that well-designed emergency services facilitate timely recognition, treatment

management, and, when needed, continued treatment of the acutely ill at the appropriate level of the health system;

PP7 Acknowledging Sustainable Development Goal 3 (Ensure healthy lives and promote well-being for all at all ages), and recognizing that well-organized, safe and high-quality emergency care is a key mechanism for achieving a range of associated targets – including those on universal health coverage, road safety, maternal and child health, noncommunicable diseases, mental health, and infectious disease;

PP8 Acknowledging further Sustainable Development Goal 11 (Make cities and human settlements inclusive, safe, resilient and sustainable) and Goal 16 (Promote peaceful and inclusive societies for sustainable development, promote access to justice for all and build effective, accountable and inclusive institutions at all levels), and noting that a strong and well-prepared everyday emergency care system is vital for mitigating the impact of disasters and mass casualty events and for maintaining delivery of health services in fragile situations and conflict-affected areas;

PP10 Recalling also the mandate of WHO’s Thirteenth General Programme of Work, 2019–2023 to improve integrated service delivery and to serve in particular the most disadvantaged, marginalized and hard-to-reach populations, to ensure that no one is left behind;

PP11 Noting that providing non-discriminatory access to all people in need of timely care in well organized, safe and high-quality emergency care services can contribute to the reduction of health inequalities;

PP12 Noting further that in many countries the emergency care system serves as the major health system safety net and the primary point of access to health services, in particular for marginalized populations, which is not an optimal use of health system resources;

PP13 Recognizing that the lack of organized emergency care in many countries leads to wide global discrepancies in outcomes across the range of emergency conditions;

PP14 Noting that many emergency care interventions are both effective and cost effective, and that integrated emergency care delivery can save lives and maximize impact across the health system;

PP15 Concerned that the lack of investment in frontline emergency care is compromising effectiveness, limiting impact and increasing cost in other parts of the health system;

PP16 Acknowledging that frontline health workers, nurses in particular, provide care for the acutely ill and injured, often without the benefit of dedicated training in the management of emergency conditions, and with limited possibilities for consultations;

PP17 Noting that improving outcomes requires understanding the potential and actual utilization of emergency care, and that existing data do not provide adequate support for effective planning and resource allocation for emergency care;

PP18 Considering that WHO has a range of guidance that allows policy-makers, planners and administrators to develop action plans that are best suited to their national contexts, along with resources for training, as well as standards for essential emergency care services and resources at each level of the health system,¹

OP1 CALLS FOR near-term additional efforts globally to strengthen the provision of emergency care as part of universal health coverage so as to ensure the timely and effective delivery of life-saving health care services to those in need;

OP2 URGES Member States:²

OP2.1 to create policies for sustainable funding, effective governance and universal access to safe, high-quality, needs-based emergency care for all, without regard to sociocultural factors, without requirement for payment prior to care, and within a broader health system that provides quality essential care and services and financial risk protection as part of universal health coverage;

OP2.2 as appropriate, to conduct voluntary assessments using the WHO emergency care system assessments tool to identify gaps and context-relevant action priorities;

OP2.3 to work towards, or promote, at appropriate levels of governance, the inclusion of routine prehospital and hospital emergency unit care into health strategies, and in other relevant planning documents, such as emergency response plans and obstetric and surgical plans;

OP2.4 to develop a governance mechanism, as appropriate to their national context, for the coordination of routine prehospital and hospital-based emergency care services, including linkage with other relevant actors for disaster and outbreak preparedness and response, including the capacity of personnel in other sectors;

OP2.5 to promote more coherent and inclusive approaches to safeguard effective emergency care systems as a pillar of universal health coverage in fragile situations and conflict-affected areas, ensuring the continuum and provision of essential health services, and public health functions, in line with humanitarian principles;

² And, where applicable, regional economic integration organizations.
OP2.6 to promote as appropriate, according to the level of health care services, from first level and above, the establishment of a dedicated area or unit for emergency services and care with appropriate equipment and capacity for management and diagnosis;

OP2.7 to promote access to timely prehospital care for all, by using informal or formal systems, as resources allow, including by establishing, where they do not exist, toll-free universal access numbers that meet international standards;

OP2.8 to implement key processes and protocols as identified in WHO guidance on emergency care systems, such as triage and checklists, as appropriate;

OP2.9 to provide dedicated training in the management of emergency conditions for all relevant types of health providers, including developing post-graduate training programmes for doctors and nurses, training frontline providers in basic emergency care, and integrating dedicated emergency care training into undergraduate nursing and medical curricula, and establishing certification pathways for prehospital providers, as appropriate to their national context;

OP2.10 to increase awareness and capacity in communities to deal with emergency situations, including through campaigns, and through training of standard practices across educational and occupational settings, adapted to their corresponding target populations, so they can identify, mitigate and refer potential emergencies;

OP2.11 to implement mechanisms for standardized data collection to characterize the local acute disease burden and identify high-yield mechanisms for improving the coordination, safety and quality of emergency care;

OP2.12 to support efforts to ensure, based on local risks, that prehospital and hospital emergency units have plans in place to protect providers, patients and infrastructure from violence, to protect providers and patients from discrimination, and to have in place clear protocols for the prevention and management of hazardous exposures;

OP3 REQUESTS the Director-General:

OP3.1 to enhance WHO’s capacity at all levels to provide necessary technical guidance and support for the efforts of Member States and other relevant actors to strengthen emergency care systems, including to ensure preparedness in all relevant contexts;

OP3.2 to foster multisectoral networks, partnerships and action plans, and to facilitate collaboration among Member States, to support the effective dissemination and implementation of best practices in emergency care;

OP3.3 to promote equitable and non-discriminatory access to safe, quality emergency care services for all people as part of universal health coverage;

OP3.4 to renew efforts outlined in WHA60.22 to provide support to Member States, upon request, for needs assessments, facility inspection, quality- and safety-improvement programmes, review of legislation, and other aspects of strengthening the provision of emergency care;

OP3.5 to support Member States to expand policy-making, administrative and clinical capacity in the area of emergency care, by the provision of policy options and technical guidance, supported by educational strategies and materials for providers and planners;

OP3.6 to strengthen the evidence base for emergency care by encouraging research on the burden of acute disease and emergency care delivery, and by providing tools, protocols, indicators and other needed standards to support the collection and analysis of data, including on cost-effectiveness;

OP3.7 to facilitate awareness and international and domestic resource mobilization, in line with the Addis Ababa Action Agenda of the Third International Conference on Financing for Development\(^1\) by providing advocacy resources;

OP3.8 to report to the Seventy-fourth World Health Assembly in 2021 on progress in the implementation of this resolution.
