WHO, UN Agencies, international organizations, non-governmental organizations (NGOs) and partners continue to support the Ministry of Health (MoH) in the Democratic Republic of the Congo to rapidly investigate and respond to the outbreak of Ebola virus disease (EVD) in Likati Health Zone, Bas Uele Province in the north-east of the country.

On 05 June 2017, one case has been retrospectively confirmed as positive for EVD by serology with a date of onset of 29 April 2017. This case was previously reported as a suspected case and is part of the known transmission chain. The contacts for this individual have already been followed up and graduated from the contact follow up period. The date of the last confirmed case reported remains as 11 May 2017.

One new suspected case has been reported as of 5 June 2017 in the Ngayi health area, with 15 associated contacts being followed up daily, a sample has been taken to test for EVD. Therefore there are currently a total of five confirmed, three probable and one suspected case. Of these, four survived and four died, resulting in a case fatality rate of 50%.

The confirmed and probable cases were reported from Nambwa (four confirmed and two probable), Ngayi (one probable) and Mabongo (one confirmed). The outbreak remains confined to Likati Health Zone. Modelling suggests the risk of further cases is currently low but not negligible, and decreases with each day without new confirmed/probable cases. As of the reporting date, 76% of simulated scenarios predict no further cases in the next 30 days.

All seven response committees are maintaining functionality at the national level, namely monitoring, case management, water sanitation and hygiene (WASH) and biosafety, laboratory and research, psycho-social management, logistics, and communication. The first response teams who have been in the field since the start of the outbreak and being replaced this week. A response team will remain in the affected areas until the declaration of the end of the outbreak.

This EVD outbreak in the Democratic Republic of the Congo was notified to WHO by the MoH on 11 May 2017. The cluster of cases and deaths of previously unidentified illness had been reported since late April 2017. Likati Health Zone shares borders with two provinces in the Democratic Republic of the Congo and with the Central African Republic (Figure 1). The affected area is remote and hard to reach, with limited communication and transport infrastructure.
As this is a rapidly changing situation, the reported number of cases and deaths, contacts being monitored and the laboratory results are subject to change due to enhanced surveillance, contact tracing activities, ongoing laboratory investigations, reclassification, and case, contact and laboratory data consolidation.
Current risk assessment

- The risk is high at the national level due to the known impact of Ebola outbreaks, remoteness of the affected area, and limited access to health care including suboptimal surveillance.
- The risk at the regional level is moderate due to the proximity of international borders and the recent influx of refugees from Central African Republic.
- The risk is low at global level due to the remoteness and inaccessibility of the area to major international ports.

The risk assessment will be re-evaluated by WHO according to the evolution of the outbreak and the available information.

WHO advises against the application of any travel or trade restrictions on the Democratic Republic of the Congo based on the currently available information. WHO continues to monitor reports of measures being implemented at points of entry.

WHO’s strategic approach to the prevention, detection and control of EVD

WHO recommends the implementation of proven strategies for the prevention and control of Ebola outbreaks. These strategies include (i) coordination of the response, (ii) enhanced surveillance, (iii) laboratory confirmation, (iv) contact identification and follow-up, (v) case management, (vi) infection prevention and control, (vii) safe and dignified burials, (viii) social mobilization and community engagement, (ix) logistics, (x) risk communication, (xi) vaccination, (xii) partner engagement, (xiii) research and (xiv) resource mobilization.

2. Actions to date

In support of the MoH and the other national authorities, an interagency rapid response team was deployed to Likati Health Zone to support the immediate investigation of the outbreak and rapidly establish key pillars of the response at the epicentre. The interagency response team is coordinated by the MoH, and supported by WHO, Institut National de Recherche Biomédicale (INRB), Médecins Sans Frontières (MSF), UNICEF, The Alliance For International Medical Action (ALIMA), International Federation of Red Cross and Red Crescent Societies (IFRC), World Food Programme (WFP), and United Nations Humanitarian Air Service (UNHAS) and other partners.

WHO is providing direct technical and operational support to the country, and collaborating closely with partners in order to ensure a rapid and effective response to this outbreak.

Coordination of the response

- Regular meetings of the Health Emergency Management Committee (COGUS) at all levels of the response operations continue in the Democratic Republic of the Congo at Health Zone, Provincial and National level, with MOH, and partners.
- Regular coordination meetings of WHO incident management teams in Kinshasa, Brazzaville, and Geneva continue across the 3-Levels of WHO.

Surveillance

- Identification of alert cases continues to be carried out through active search methods in the communities affected.
- On 2 June, a training session was provided to FETP students on Ebola epidemiology diagnostic, surveillance and vaccine to build future capacity.
Laboratory

- One sample taken from a suspected case has tested positive for serology (IgG+), and has retrospectively been classified as a confirmed case.

Contact identification and follow-up

- The majority of contacts completed the 21 day monitoring period on 02 June 2017.
- Fifteen contacts related to the new suspected case have been identified and are being followed up.

Case management

- The case management commission has defined the profiles of nurses and medical doctors (2 nurses and 1 medical doctor per health area) to be deployed to the Likati Health Zone. Deployment is to last at least 3 months to ensure primary health care as well as training of local health care providers. A minimum package of activities is being developed and funding is being sought.
- Support is being provided to survivors on prevention against potential sexual transmission of the virus.
- In order to increase access to and use of quality primary health care services, free health care is now operational in Likati covering consultations and essential drugs provision to address the most common diseases in the Health Zone.
- The commission is developing a minimum free package of services including and not limited to deliveries and childbirth interventions and general surgery.

Vaccination

- The protocol for a possible ring vaccination has been formally approved by the national regulatory authority and Ethics Review Board of the Democratic Republic of the Congo Vaccine.
- International vaccine deployment and cold chain shipment to DRC is not advised at this point. Planning and arrangements should be in place for immediate deployment if necessary.
- The government of the Democratic Republic of the Congo and MSF with support of WHO and other partners are working on detailed planning and readiness to offer access to the rVSV ZEBOV experimental/investigational vaccine, within the Expanded Access framework, with informed consent and in compliance with good clinical practice.
- Planning and readiness should be completed urgently to be able to rapidly initiate ring vaccination should an EVD laboratory confirmed case be identified outside already defined chains of transmission. The vaccine would be offered to contacts and contacts of contacts of a confirmed EVD case, including health care workers and field laboratory workers.
- MOH, with support from WHO and partners continue active surveillance and response activities, including completing the contact follow-up period for already identified contacts, and conducting rapid laboratory evaluation of suspected cases as per WHO guidelines.

Infection prevention and control (IPC) and WASH

- Following a rapid review of WASH/IPC requirements in four health areas and the Likati hospital, gaps have been identified in terms of lack of latrines, showers, waste management equipment, and running water.
Social mobilization, community engagement and risk communications

- A media sensitization meeting has been conducted by the MoH and WHO on 3 June 2017 in the WHO office in Kinshasa with more than 40 participants from major national and international communication and media organizations.

Logistics

- Helicopter flights to assist in access to the response area are scheduled until the end of June. After this date, air transportation from Likati will no longer be provided by WHO/UNHAS.

Emergency Public Communication

- The story has been shared with the global media list and was amplified through social media (Facebook and Twitter).

Resources mobilization

- The Government of the Democratic Republic of the Congo has developed a comprehensive national response plan to the EVD outbreak based on the recognised effective activities to rapidly control an outbreak. The response plan and national budget amounting to US$ 14 million, has been presented and discussed with partners and stakeholders in Kinshasa.
- WHO and partners are developing a strategic response plan to support national activities and frame and coordinate the support of international partners and stakeholders.
- The Minister of Public Health of the Democratic Republic of the Congo has requested WHO’s support to strengthen the response to the outbreak, and coordinate the support of major UN, NGO and International Organizations, and partners in the Global Outbreak Alert and Response Network (GOARN). Funding is urgently needed to ensure that WHO and partners can effectively support the Government to implement activities as part of the joint rapid response. A donor alert was therefore issued for US$ 10 Million.

Environmental investigations

- The unusually high mortality in the local pig population is still under investigation.

Partnership

- WHO and GOARN continue to mobilize partners to provide technical and logistical support to the country, and work closely together with UN Clusters, stakeholders and donors to ensure appropriate support for the response.
- GOARN Operational Support Team hosts weekly assessment and coordination teleconference for operational partners on current outbreaks of international concern, particularly the EVD outbreak in DRC.
- At the request of Dr Salama (Executive Director of the WHO Health Emergencies Programme) at WHO HQ convened a time-limited Ebola Inter-Agency Coordination Group with senior leadership from MSF, IFRC, UNICEF, US CDC and WFP, to provide agency updates about response actions and discuss any critical coordination issues.
Preparedness

• The Central African Republic has requested support for training in Bangassou (a city on the border with the Democratic Republic of the Congo) in two areas;
  • Case management for healthcare workers including Infection Prevention and Control
  • Contact tracing, social mobilization and alert management for community health workers

• A WHO evaluation mission will be deployed next week to Bangui, the capital of the Central African Republic to work with Country Office and Ministry of Health to develop a strategy for training in clinical management.

IHR travel measures

• WHO does not currently recommend any restrictions of travel and trade in relation to this outbreak.
• As of 06 June 2017, nine countries have instituted entry screening at airports and ports of entry (Kenya, Malawi, Nigeria, Rwanda, South Africa, Uganda, the United Republic of Tanzania, Zambia and Zimbabwe), and one country has issued travel advisories to avoid unnecessary travel to the Democratic Republic of the Congo (Rwanda). Two countries (Kenya and Rwanda) implemented information checking on arrival for passengers with travel history from and through the Democratic Republic of the Congo. These measures are within the prerogative of the States Parties and do not qualify as additional health measures that significantly interfere with international traffic under Article 43 of the IHR (2005).
• In addition, Rwanda instituted denial of entry for passengers with fever travelling from the affected areas in the Democratic Republic of the Congo. WHO is currently working with Rwandan authorities to receive the public health rationale and scientific evidence for this measure, which significantly interferes with international traffic, in accordance with Article 43 of the IHR (2005).
• A request for verification is ongoing with Nigerian authorities in relation to denial of entry of human remains travelling from Democratic Republic of the Congo and potential sanctions against Kenyan Airlines in relation to this measure.

3. Summary of public health risks, needs and gaps

The most critical needs include active case search to ensure no suspected case is undetected, maintenance of laboratory capacity in the field to enable rapid confirmation of results, the need for differential diagnosis of those who remain sick but have tested negative for EVD, enhancement of IPC measures and planning for strengthening of the surveillance system post-response activities.
