1. Situation update

WHO, UN Agencies, international organizations, non-governmental organizations (NGOs) and partners continue to support the Ministry of Health (MoH) in the Democratic Republic of the Congo to rapidly investigate and respond to the outbreak of Ebola virus disease (EVD) in Likati Health Zone, Bas Uele Province in the north-east of the country.

On 12 June 2017, no new confirmed or probable cases were reported. Since the last situation update on 9 June, 33 alerts have been reported and investigated, of which 1 currently fulfils the suspected case definition, a sample has been taken for laboratory analysis and results are pending. The last confirmed case was isolated on 17 May 2017 and tested negative for EVD by PCR for the second time on 21 May 2017.

There are currently a total of five confirmed, three probable and 1 suspected case. Of the confirmed and probable cases, four survived and four died, resulting in a case fatality rate of 50%. The confirmed and probable cases were reported from Nambwa (four confirmed and two probable), Ngayi (one probable) and Mabongo (one confirmed). The current suspected case was reported in Mobenge.

Data modelling suggests that the risk of further cases is currently low but not negligible, and decreases with each day without new confirmed/probable cases. As of the reporting date, 90% of simulated scenarios predict no further cases in the next 30 days.

All seven response committees are maintaining functionality at the national level, namely monitoring, case management, water sanitation and hygiene (WASH) and biosafety, laboratory and research, psycho-social management, logistics, and communication. A response team will remain in the affected areas until the declaration of the end of the outbreak.

This EVD outbreak in the Democratic Republic of the Congo was notified to WHO by the MoH on 11 May 2017. The cluster of cases and deaths of previously unidentified illness had been reported since late April 2017. Likati Health Zone shares borders with two provinces in the Democratic Republic of the Congo and with the Central African Republic (Figure 1). The affected area is remote and hard to reach, with limited communication and transport infrastructure.
As this is a rapidly changing situation, the reported number of cases and deaths, contacts being monitored and the laboratory results are subject to change due to enhanced surveillance, contact tracing activities, on-going laboratory investigations, reclassification, and case, contact and laboratory data consolidation.
Current risk assessment

The previous risk assessment undertaken on 16 May 2017 was re-evaluated on 6 June 2017 by WHO in light of the evolution of the outbreak and the available information.

- The overall risk at the national level has been revised to moderate due to the fact that a rapid response team was deployed, field investigation identified cases and contacts and all contacts completed their 21 day monitoring period. A response team remains in the field and treatment units are established.
- The risk at the regional and global level is low as no cases have been reported outside of Likati health zone and the area is remote with limited access and transport to/from the affected area.

WHO advises against the application of any travel or trade restrictions on the Democratic Republic of the Congo based on the currently available information. WHO continues to monitor reports of measures being implemented at points of entry.

WHO’s strategic approach to the prevention, detection and control of EVD

WHO recommends the implementation of proven strategies for the prevention and control of Ebola outbreaks. These strategies include (i) coordination of the response, (ii) enhanced surveillance, (iii) laboratory confirmation, (iv) contact identification and follow-up, (v) case management, (vi) infection prevention and control, (vii) safe and dignified burials, (viii) social mobilization and community engagement, (ix) logistics, (x) risk communication, (xi) vaccination, (xii) partner engagement, (xiii) research and (xiv) resource mobilization.

2. Actions to date

In support of the MoH and the other national authorities, an interagency rapid response team was deployed to Likati Health Zone to support the immediate investigation of the outbreak and rapidly establish key pillars of the response at the epicentre. The interagency response team is coordinated by the MoH, and supported by WHO, Institut National de Recherche Biomédicale (INRB), Médecins Sans Frontières (MSF), United Nations Children’s Fund (UNICEF), The Alliance For International Medical Action (ALIMA), International Federation of Red Cross and Red Crescent Societies (IFRC), World Food Programme (WFP), and United Nations Humanitarian Air Service (UNHAS) and other partners.

WHO continues to provide direct technical and operational support to the country, and is collaborating closely with partners to maintain a rapid and effective response to this outbreak.

Coordination of the response

- Regular meetings of the Health Emergency Management Committee (COGUS) at all levels of the response operations continue in the Democratic Republic of the Congo at Health Zone, Provincial and National level, with MOH, and partners.
- Regular coordination meetings of WHO incident management teams in Kinshasa, Brazzaville, and Geneva continue across the 3-Levels of WHO.

Surveillance

- Identification and investigation of alert cases and community deaths continues to be carried out through active search methods in the communities affected.
- On 12 June five community alerts were reported and investigated, one of which fulfilled the criteria to be a suspect case.
Contact identification and follow-up

- There are currently no contacts under follow-up.

Case management

- Newly identified suspected cases continue to be admitted to treatment centres
- Support is being provided to the four survivors on prevention against potential sexual transmission of the virus.
- In order to increase access to and use of quality primary health care services, free health care is now operational in Likati covering consultations and essential drugs provision to address the most common diseases in the health zone. An increase in utilisation has been observed.
- MoH in partnership with WHO is exploring means to continue ensuring that the population of Likati health zone have access to free quality primary health services, thereby contributing to a quick recovery of the health system after the outbreak. A monthly subsidy of USD 300 per health facility per month has been proposed; a political decision is pending.

Vaccination

- The protocol for a possible ring vaccination has been formally approved by the national regulatory authority and Ethics Review Board of the Democratic Republic of the Congo Vaccine. The government of the Democratic Republic of the Congo and MSF with support of WHO and other partners are working on detailed planning and readiness to offer access to the rVSV ZEBOV experimental/investigational vaccine, within the Expanded Access framework, with informed consent and in compliance with good clinical practice.
- International vaccine deployment and cold chain shipment to DRC is not advised at this point.

Infection prevention and control (IPC) and WASH

- WHO guidelines for IPC and patient care in the context of Ebola outbreak have been disseminated.
- Toilets, a placenta pit and a rapid burner are being constructed at the Likati General Hospital
- Aquatabs continue to be distributed in affected communities.
- A review of the IPC component of the integrated training module for healthcare providers is being undertaken, it is proposed to broaden the content.
- An assessment visit of Likati Hospital was made to review IPC measures in place and propose improvements.

Social mobilization, community engagement and risk communications

- House to house sensitization on the signs and symptoms of EVD is ongoing to cover nearly 4000 families in Namba, Azande, Ngbatala, Mitende, Mobenge, Tobongisa and Mofendu health areas.
- Broadcasts by local Radio in Likati continue with key messages for social communication and community engagement have been broadcasted
- A Knowledge, Attitudes and Practices (KAP) survey has been conducted in five health catchment areas including Mobenge, Tobongisa, Azande, Ngbatala and Mofendu.
- Risk communication materials (posters and leaflets) have been received and will be distributed
Logistics

- Since the beginning of the outbreak, WHO has set up and maintained an airlift between Kisangani and the affected area, and provides logistic support to response activities. Three logistic bases in Kinshasa, Kisangani, and Likati are still operational and continue to assist with deployment of WHO staff and partner organizations (including UNICEF, MSF, ALIMA, and Red Cross), to and from the affected areas including transportation of response materials and equipment.
- WHO logistics team also support the distribution of donated drugs and hospital supplies to rest of the health areas in Likati as part of a temporary free medical care programme.
- A logistician and an assistant remain in Likati to support surveillance, laboratory and other activities while a further logistician supports the team from Kisangani and is managing the helicopter scheduling.

Environmental investigations

- The unusually high mortality in the local pig population remains under investigation.
- Specimens from 12 pigs and 6 goats have initially tested negative for EVD by PCR.

Emergency Public Communication

- A video demonstrating the importance of mobile laboratory testing in the affected zone has been posted on WHO Facebook, Twitter and Instagram. https://www.facebook.com/WHO/videos/1495592203819491/

Resources mobilization

- The Government of the Democratic Republic of the Congo has developed a comprehensive national response plan to the EVD outbreak based on the recognised effective activities to rapidly control an outbreak. The response plan and national budget amounting to US$ 14 million, has been presented and discussed with partners and stakeholders in Kinshasa.
- WHO and partners are developing a strategic response plan to support national activities and frame and coordinate the support of international partners and stakeholders.
- The Minister of Public Health of the Democratic Republic of the Congo has requested WHO’s support to strengthen the response to the outbreak, and coordinate the support of major UN, NGO and International Organizations, and partners in the Global Outbreak Alert and Response Network (GOARN).

Partnership

- WHO and GOARN continue to mobilize partners to provide technical and logistical support to the country, and work closely together with UN Clusters, stakeholders and donors to ensure appropriate support for the response.
- GOARN Operational Support Team hosts weekly assessment and coordination teleconference for operational partners on current outbreaks of international concern, particularly the EVD outbreak in DRC.
- At the request of Dr Salama (Executive Director of the WHO Health Emergencies Programme) at WHO HQ convened a time-limited Ebola Inter-Agency Coordination Group with senior leadership from MSF, IFRC, UNICEF, US CDC and WFP, to provide agency updates about response actions and discuss any critical coordination issues.

IHR travel measures

- WHO does not currently recommend any restrictions of travel and trade in relation to this outbreak.
- As of 12 June 2017, nine countries have instituted entry screening at airports and ports of entry (Kenya, Malawi, Nigeria, Rwanda, South Africa, Uganda, the United Republic of Tanzania, Zambia and Zimbabwe), and one country has issued travel advisories to avoid unnecessary travel to the Democratic Re-
public of the Congo (Rwanda). Two countries (Kenya and Rwanda) implemented information checking on arrival for passengers with travel history from and through the Democratic Republic of the Congo. These measures are within the prerogative of the States Parties and do not qualify as additional health measures that significantly interfere with international traffic under Article 43 of the IHR (2005).

In addition, Rwanda instituted denial of entry for passengers with fever travelling from the affected areas in the Democratic Republic of the Congo. WHO is currently working with Rwandan authorities to receive the public health rationale and scientific evidence for this measure, which significantly interferes with international traffic, in accordance with Article 43 of the IHR (2005).

A request for verification is ongoing with Nigerian authorities in relation to denial of entry of human remains travelling from Democratic Republic of the Congo and potential sanctions against Kenyan Airlines in relation to this measure.

Following requests for verification of media rumors with regards to border closure between South Sudan and the Democratic Republic of the Congo, the Ministry of Health South Sudan clarified that there has been no national government decision to close the border between DRC and South Sudan. On 26 May, Minister of Health and other senior personnel travelled to the bordering States to supervise preparedness activities and also to ensure that measures implemented were all in adherence with the IHR and the MoH Viral Hemorrhagic fever Control guidelines.

3. Summary of public health risks, needs and gaps

The most critical needs include active case search to ensure no suspected case is undetected, maintenance of laboratory capacity in the field to enable rapid confirmation of results, the need for differential diagnosis of those who remain sick but have tested negative for EVD, enhancement of IPC measures and planning for strengthening of the surveillance system post-response activities.

The lastest date of follow-up completion is 6/06/17. As of 9/06/17, 15 contacts from Nambwa and 18 from Azande completed follow-up.

3 cases were classified as positive following increasing IgG titres. The last confirmed patient tested PCR negative on 21/05/17 following recovery.

Samples were collected after unusually high number of deaths in pigs. As of 12/06/17, 12 pig and 6 goat samples initially tested Ebola PCR negative.
Annex 2: Timelines of key activities during the EVD outbreak in Likati, Democratic Republic of the Congo

- **April 2017**
  - Initial field investigation by Likati Rapid response team
  - Collection of 5 samples from suspected cases
  - WHO press release on the declaration of the outbreak by the MOH
  - First situation report developed

- **May 2017**
  - Deployment of WHO and MOH experts in the field
  - Shipment of samples to CMRRF, Gabon
  - Mobile laboratory begins sample analysis in Likati
  - EVD Treatment Centre established
  - Report of pigs death in 3 different villages
  - Preparedness mission to CAR scheduled

- **June 2017**
  - WHO regional director mission to DRC
  - Joint MOH and WHO leadership mission to the affected areas
  - Press conference by RD and Executive Director
  - EVD prevention awareness raising in 4 schools (600 attendees)
  - 9 countries instilled entry screening at points of entry
  - Donor alert for fund mobilization released
  - Official examination of the 8th EVD outbreak by the MOH
  - High level WHO and MOH meeting
  - EVD positive specimens testing by NMRU Laboratory

- **Notable Events**
  - All contacts completed follow up processes.
  - Two previous suspected cases confirmed positive for EVD by serology, onset dates 24 April and 11 May.
