WHO Child Growth Standards
Training Course on Child Growth Assessment

Acknowledgements

This training course has been prepared by the Department of Nutrition, World Health Organization, Geneva. The project was designed and coordinated by Adelheid W. Onyango and Mercedes de Onis who provided the main technical input. Contributions to the technical content by Chessa Lutter (AMRO/PAHO), Cutberto Garza (Boston, MA, USA) and Ilgi Ertem (Ankara, Turkey) are gratefully acknowledged. The field-test version of the materials was reviewed in-depth by staff of the FANTA Project, USAID, and participants in the PAHO regional Training of Trainers workshop in Barbados, May 2006. Version 1, published in November 2006 was reviewed during Regional workshops in EMRO (Cairo, February 2007), AFRO (Addis Ababa, June 2007), WPRO (Shah Alam, September 2007) and SEARO (Bali, October 2007). The comments and suggestions provided by participants at these workshops have been used to refine the course for this final printing. The course modules were developed and laid out by Patricia Whitesell Shirey and Florence C. Johnson of ACT International, Atlanta, Georgia, USA.

With funds from the Bill and Melinda Gates Foundation, the course was field-tested in collaboration with the Caribbean Program Coordination, PAHO in Barbados, and its first version further tested and refined with the collaboration of the respective WHO Regional Offices (EMRO, AFRO, WPRO and SEARO) and the Country Offices in Ethiopia, Malaysia and Indonesia.

7. Oedema of both feet

8. Oedema of both feet
Study photos 9–13 when instructed in Module C: Interpreting Growth Indicators

9. Underweight boy
   1 year, 1 month
   70.3 cm, 7.5 kg

10. Normal weight boy
    3 years, 11 months
    109.6 cm, 19.5 kg

11. Obese boy
    3 1/2 months,
    63 cm, 10 kg
12. Stunted girl
1 year, 0 month
67.8 cm, 7.6 kg

13. Two girls
Details about photos 1—8

1. Photos 1 and 2 show the front and back of the same child. The child has severe wasting. From the front, the ribs show, and there is loose skin on the arms and thighs. The bones of the face clearly show.

2. From the back, the ribs and spine show. Folds of skin on the child’s buttocks and thighs look like “baggy pants.”

3. This girl is 2 years old. She weighs 4.75 kg and is 67.4 cm in length. (She could not stand for height measurement.) She is severely wasted.

4. This child has generalized oedema. Feet, legs, hands, arms and face appear swollen. Several patches of discoloured, cracking skin are visible, but you would have to undress the child to see if there are more. There may be a fissure (large crack) on the child’s ankle.

5. This child has scaly patches on the hands and thighs. There is also generalized oedema (swollen legs, hands, arms, and face).

6. This child has moderate oedema seen in the feet and lower legs. At the same time, there is severe wasting of the upper arms, and the ribs and collar bones clearly show.

7. Both feet and legs are swollen. Notice the “pitting” oedema in the lower legs.

8. This child has oedema of both feet as well as the lower legs. She is aged 1 year and 8 months, weighs 6.5 kg, and is 67 cm in length. Her weight is increased due to fluid retention.
