RELEVÉ ÉPIDÉMIOLOGIQUE HEBDOMADAIRE WEEKLY EPIDEMIOLOGICAL RECORD

Notifications et informations se rapportant à l'application
du Règlement sanitaire international et notes relatives à la
fréquence de certaines maladies

Service de la Quarantaine internationale
Adresse télégraphique: EPIDNATIONS GENÈVE

Notifications under and information on the application of the
International Sanitary Regulations and notes on current incidence
of certain diseases

International Quarantine Service
Telegraphic Address: EPIDNATIONS GENÈVE

24 JUIN 1966

41^e ANNÉE — 41st YEAR

24 JUNE 1966

MALADIES QUARANTENAIRES — QUARANTINABLE DISEASES

Territoires infectés au 23 juin 1966 — Infected areas as on 23 June 1966

Notifications reçues aux termes du Règlement sanitaire international
concernant les circonscriptions infectées ou les territoires où la présence
de maladies quaranténaires a été signalée (voir page 329).

■ = Circonscriptions ou territoires notifiés aux termes de l'article 3 à la
date donnée.

Autres territoires où la présence de maladies quaranténaires a été notifiée
aux termes des articles 4, 5 et 9 a):

A = pendant la période indiquée sous le nom de chaque maladie;
B = antérieurement à la période indiquée sous le nom de chaque maladie;
* = territoires nouvellement infectés.

Notifications received under the International Sanitary Regulations relating
to infected local areas and to areas in which the presence of quarantinable
diseases was reported (see page 329).

■ = Areas notified under Article 3 on the date indicated.

Other areas in which the presence of quarantinable diseases was notified
under Articles 4, 5 and 9 (a):

A = during the period indicated under the heading of each disease;
B = prior to the period indicated under the heading of each disease;
* = newly infected areas.

CRITÈRES APPLIQUÉS POUR LA COMPILATION DE LA LISTE DES TERRITOIRES INFECTÉS

Conformément au Règlement sanitaire international (tel qu'il a été amendé par les Règlements additionnels de 1955, 1956 et 1963), les critères suivants sont appliqués pour la compilation et la mise à jour de la liste des territoires infectés:

- I. Un territoire ou une circonscription est porté sur la liste lorsque l'Organisation a reçu:
 - i) une déclaration d'infection, aux termes de l'article 3;
 - ii) notification d'un premier cas de peste, de choléra, de fièvre aune ou de variole qui n'est ni un cas importé ni un cas transféré;
 - iii) notification de l'existence de la peste parmi les rongeurs, à terre ou à bord d'engins flottants qui font partie d'une installation portuaire;
 - iv) notification de l'activité du virus amaril chez des vertébrés autres que l'homme, déterminée par l'application de l'un des critères suivants:
 - a) découverte des lésions spécifiques de la fièvre jaune dans le foie de vertébrés de la faune indigène du territoire ou de la circonscription; ou
 - b) isolement du virus de la fièvre jaune chez n'importe quel vertébré de la faune indigène;
 - v) notification d'une épidémie de typhus ou de fièvre récurrente [le terme épidémie s'entend de la présence d'au moins deux cas, qui ne sont ni des cas importés ni des cas transférés, dans une circonscription pendant une période de quatre semaines (typhus) ou de trois semaines (fièvre récurrente)].
- II. Les territoires ou circonscriptions sont radiés de la liste dans les conditions suivantes:
 - i) si le territoire ou a circonscription a été déclaré infecté (article 3) il est radié de la liste lorsque l'Organisation reçoit une notification faite en application de l'article 6, suivant laquelle le territoire ou la circonscription est indemne d'infection. Si l'on dispose de renseignements indiquant que le territoire ou la circonscription n'a pas été indemne d'infection pendant une période correspondant à la durée indiquée dans l'article 6, la notification prévue par l'article 6 n'est pas publiée, le territoire ou la circonscription reste sur la liste et l'administration sanitaire intéressée est priée de donner des éclaircissements quant à la situation exacte;
 - ii) si le territoire ou la circonscription a été porté sur la liste pour des raisons autres que la réception de la notification prévue par l'article 3 (voir I. ii) à v) ci-dessus), il est radié de la liste lorsque des rapports hebdomadaires négatifs ont été reçus pendant une période dont la durée est indiquée à l'article 6. A défaut de tels rapports, le territoire ou la circonscription est radié de la liste lorsque, au terme de la période indiquée à l'article 6, l'Organisation reçoit une notification d'exemption d'infection (article 6).

CRITERIA USED IN COMPILING THE INFECTED AREA LIST

Based on the International Sanitary Regulations (as amended by Additional Regulations of 1955, 1956 and 1963) the following criteria are used in compiling and maintaining the infected area list:

- I. An area is entered in the list on receipt of information of:
 - (i) a declaration of infection under Article 3;
 - (ii) the first case of plague, cholera, yellow fever or smallpox that is neither an imported case nor a transferred case;
 - (iii) plague infection among rodents on land or on craft which are part of the equipment of a port;
 - (iv) activity of yellow-fever virus in vertebrates other than man using one of the following criteria:
 - (a) the discovery of the specific lesions of yellow fever in the liver of vertebrates indigenous to the area; or
 - (b) the isolation of yellow-fever virus from any indigenous vertebrates;
 - (v) an epidemic of typhus or relapsing fever [an epidemic is interpreted to mean the occurrence of two or more cases which are neither imported nor transferred cases in a local area during a four-week (typhus) or a three-week (relapsing fever) period].
- II. An area is deleted from the list on receipt of information as follows:
 - (i) if the area was declared infected (Article 3), it is deleted from the list on receipt of a declaration under Article 6 that the area is free from infection. If information is available which indicates the area has not been free from infection during the time intervals stated in Article 6, the Article 6 declaration is not published, the area remains on the list and the health administration concerned is queried as to the true situation
 - (ii) if the area entered the list for reasons other than a declaration under Article 3 (see I. (ii) to (v) above), it is deleted from the list on receipt of negative weekly reports for the time intervals stated in Article 6. In the absence of such reports, the area is deleted from the list on receipt of a notification of freedom from infection (Article 6) when at least the time period given in Article 6 has elapsed since the last notified case.

INFORMATIONS ÉPIDÉMIOLOGIQUES

EPIDEMIOLOGICAL NOTES

CHOLÉRA

CHOLERA

Asie

Asia

Ceylan. —¹ Le cas de choléra El Tor notifié dans le District de Mannar n'a pas été confirmé par les examens de laboratoire effectués à l'*Indian Institute of Biochemistry and Experimental Medicine* de Calcutta.

Ce district est donc supprimé de la liste des territoires infectés.

Ceylon. —¹ The reported case of cholera El Tor in Mannar District was not confirmed by laboratory examination carried out in Calcutta at the *Indian Institute of Biochemistry and Experimental Medicine*.

This District is therefore removed from the infected area list.

¹ Voir N° 18, p. 240.

¹ See No. 18, p. 240.

PESTE

PLAGUE

Amérique

America

Etats-Unis d'Amérique, Utah. —¹ Le Comté de San Juan a été considéré comme circonscription infectée de peste à la suite du décès d'un garçon de cinq ans survenu le 23 mai.

L'infection à *Pasteurella Pestis* a été mise en évidence par examen bactériologique de routine sur des cultures post-mortem de sang du cœur effectuées à l'*Utah State Laboratory*, puis confirmée par la technique des anticorps fluorescents au *Communicable Disease Center*, Atlanta, Georgie. Un diagnostic rétrospectif de peste chez ce garçon de cinq ans a été rapporté le 13 juin.

Cette circonscription a été déclarée indemne de l'infection le 17 juin selon les dispositions de l'Article 6. D'après les résultats des enquêtes effectuées, aucun autre cas n'a été trouvé et il n'existe pas de peste parmi les rongeurs.

United States of America, Utah. —¹ San Juan County was considered a plague-infected local area on the basis of the death on 23 May of a five-year-old boy.

Cultures of heart blood taken at autopsy were found positive for *Pasteurella Pestis* by routine bacteriological examination at the Utah State Laboratory and were confirmed by fluorescent antibody technique at the *Communicable Disease Center*, Atlanta, Georgia. A retrospective diagnosis of plague in this five-year-old boy was reported on 13 June.

This local area was declared free of infection under the provisions of Article 6 on 17 June. After investigation, no further cases and no plague among rodents have been found.

¹ Voir N° 24, p. 321.

¹ See No. 24, p. 321.

VARIOLE

SMALLPOX

Europe

Europe

Royaume-Uni. —¹ Cinq nouveaux cas de variole mineure ont été notifiés le 20 juin dans les Districts urbain et rural de Pontypool, Monmouthshire, pays de Galles. Les nouveaux cas font partie de la même famille que le premier cas identifié rapporté ultérieurement, soit un enfant de quatre mois. Celui-ci est tombé malade le 2 juin, avec apparition d'une éruption le 6 juin et hospitalisation le 9 juin.

Les cinq autres enfants de la famille furent signalés récemment comme ayant la varicelle. Deux d'entre eux qui avaient encore une éruption, furent admis à l'hôpital le 15 juin. Les cinq cas sont maintenant considérés comme des cas de variole mineure; le tableau ci-dessous donne les renseignements recueillis sur ces cas:

United Kingdom. —¹ Five new cases of variola minor were notified on 20 June in Pontypool Urban and Rural Districts, Monmouthshire, Wales. The new cases are siblings of the first case recognized in an infant four months of age and reported previously. The infant first became ill on 2 June, has a rash on 6 June and was hospitalized on 9 June.

The five other children in the family were stated to have had chicken-pox recently. Two of these still had a rash and were admitted to hospital on 15 June. All five are now considered to be cases of variola minor; their history is as follows:

Sexe/Age Sex/Age	Début de la maladie Onset	Remarques Remarks
M. 7	11.V	
M. 8	25.V	Hospitalisation le 15 juin; vaccination avec prise en 1962/ Admitted to hospital 15 June; successful vaccination 1962
F. 5	26.V	
F. 9	26.V	
F. 10	27.V	Hospitalisation le 15 juin; vaccination avec prise en 1962/ Admitted to hospital 15 June; successful vaccination 1962

¹ Voir N° 24, p. 321.

¹ See No. 24, p. 321.

VARIOLE (suite)

Europe (suite)

La mère et le père avaient tous deux été vaccinés avec prise en 1962 et furent revaccinés.

Cette famille réside dans une grande cité et tous les enfants vont à la même école (environ 400 enfants).

Jusqu'à présent, aucune relation n'a pu être établie entre ces nouveaux cas et l'épidémie dans le Staffordshire et on ne possède aucun indice quant à leur origine. Il est cependant connu que la varicelle a sévi dans cette région.

La vaccination a été proposée à tous les enfants de l'école et à tous les contacts connus.

GRIPPE

Amérique

Canada. —¹ En mars, des poussées d'allure grippale affectèrent surtout les enfants d'âge scolaire dans deux communautés situées à l'ouest de Calgary, Alberta. Des cas isolés se sont produits dans toute la province. L'examen de sérums couplés prélevés principalement chez des adultes a mis en évidence l'infection à virus A dans 23 cas et l'infection à virus B dans deux cas.

Entre milieu mars et fin mars, des poussées d'allure grippale ont été observées chez des enfants et des adultes de diverses régions de la Province de Manitoba. L'infection à virus A a été mise en évidence par les examens sérologiques couplés de 26 malades.

¹ Voir N° 14, p. 191.

SMALLPOX (contd.)

Europe (contd.)

The mother and father were both successfully vaccinated in 1962 and have been revaccinated.

This family lives on a large housing estate and all the children go to one school (approximately 400 children).

As yet no connecting links with the outbreak in the Staffordshire area have been found and there are no clues as to the origin. It is, however, known that chicken-pox has been common in the region.

Vaccination has been offered to all the schoolchildren and to all known contacts.

INFLUENZA

America

Canada. —¹ In March outbreaks of influenza-like illness occurred mainly in schoolchildren in two communities west of Calgary, Alberta. Scattered cases occurred throughout the province. From paired sera mainly from adults evidence of infection with Virus A was obtained from 23 cases and of Virus B from two cases.

Between the middle and end of March, influenza-like illnesses occurred in children and adults in separate areas in Manitoba. From paired sera from 26 patients evidence of infection with Virus A was obtained.

¹ See No. 14, p. 191.
