Update on the Dengue situation in the Western Pacific Region

Northern Hemisphere

Cambodia
As of epidemiological week 44, 2021, a total of 1,523 dengue cases, including four deaths, have been reported in Cambodia for 2021. The number of cases reported weekly remains lower than the normal range of cases reported from 2015 to 2020 (Figure 1). The reported number of dengue cases is lower in all provinces compared to trends observed in 2020.

China
In October 2021, six dengue cases and no deaths were reported in China. The trend in 2021 is below usual seasonal trend, as compared to previous years (Figure 2).

Lao People’s Democratic Republic
During epidemiological week 46 of 2021, 22 dengue cases and no deaths were reported in Lao People’s Democratic Republic (Figure 3). The cumulative number of cases reported as of epidemiological week 46 2021 is 1,303. This is lower compared to 7,352 cases reported during the same period in 2020.

Malaysia
During epidemiological week 47 of 2021, a total of 490 dengue cases and no death were reported. As of 27 November 2021, the cumulative number of reported cases is 23,547. This is a significant decrease of 73% compared to 85,582 cases reported during the same period in 2020. As of epidemiological week 47, a total of 18 deaths due to dengue have been reported in 2021, compared to 137 deaths during the same period in 2020.
Philippines (no update)
In epidemiological week 42, from 17 to 23 October 2021, there was a total of two hundred sixty-four (264) dengue cases with two (2) reported mortality. This is 77% lower compared to the same period in 2020 (n=1,138). From 1 January to 23 October 2021, there has been a total of 61,170 dengue cases with 216 deaths (CFR 0.4%) reported, this is 21% lower compared to the 77,859 cases reported in the same period in 2020.

Singapore
In epidemiological week 46 of 2021, 56 dengue cases were reported in Singapore and a total of 4,878 cases have been reported since epidemiological week 1 of 2021 (Figure 6). Weekly trends are within expected seasonal levels.

Viet Nam
During week 46 of 2021, there were 1,637 cases and no deaths reported from 39 out of 63 provinces. The number of cases decreased by 14.8% compared to the previous week (1,922 cases including no deaths). As of 21 November 2021, a total of 65,241 cases of dengue, including 22 deaths, have been reported in Viet Nam. Compared to the same period in 2020 (117,170 cases including 23 deaths), the cumulative number of cases decreased by 44.3%.

Southern Hemisphere
Australia
As of 7 November 2021, five cumulative cases of dengue have been reported in Australia to-date (Figure 8). In contrast, there were 244 dengue cases reported in Australia from 1 January to 8 November 2020 indicating a marked reduction in the number of cases. The significant drop in dengue cases for 2021 in Australia as compared to previous years during the same time period may be attributed to COVID-19 related travel restrictions. Prior to COVID-19, Australia had seen increasing notifications in overseas-acquired cases from returning travellers to dengue endemic areas.
Pacific Islands Countries

French Polynesia (no update)
During epidemiological weeks 43 and 44 of 2021, out of 16 suspected dengue cases tested for dengue-specific IgM, no samples tested positive. In 2021, the proportion of dengue-like illness (DLI) cases among consultations at sentinel sites (Figure 9) started to increase between weeks 31 and 34, along with a peak in COVID-19 cases.

New Caledonia (no update)
From epidemiological weeks 1 to 45 of 2021, a total of 116 dengue cases were reported in New Caledonia, including 92 confirmed cases, 23 probable cases, and one suspected case (Figure 10). This is an increase compared to the same period in 2020 when a total of 63 total dengue cases were reported, but the peak and majority of cases were reported at the beginning of the year and current trend is similar to last year. DENV-2 was detected in 85 out of the 92 confirmed cases as of 15 November 2021.

Wallis and Futuna
During epidemiological weeks 46 to 47 of 2021, no confirmed cases of dengue were reported in Wallis and Futuna (Figure 11). As of epidemiological week 47, 2021, there have been 68 cases reported. Among them, 63 cases were reported in Futuna and five cases reported in Wallis. In 2020, there were a cumulative of 124 confirmed dengue cases.

*Since week 44, the dengue surveillance bulletin of Wallis and Futuna has discontinued updating this graph.*
Pacific Island Countries and Areas (PICs) – Dengue-like illness (DLI) Surveillance

During epidemiological week 46 of 2021, Pacific Island Countries and Areas with available surveillance data are reporting no or low numbers of DLI cases.
Caution should be taken in interpreting these data as there may be changes in the number of sentinel sites reporting to the Pacific Syndromic Surveillance System.
