# Employment and participation of women in the work of WHO 

Report by the Secretariat

1. The Executive Board and the Health Assembly have for the last two decades been endeavouring to improve women's employment and participation in WHO by establishing a series of targets, time frames and recruitment thresholds (see Annex 1). This document reports on progress in meeting the most recent objectives, namely, gender parity for professional and higher graded categories and, as a means of achieving that target, a $50 \%$ recruitment threshold (i.e. $50 \%$ of new appointments to the professional categories should be women) by 2002 .
2. Well over a decade after a $30 \%$ target was set, women account for just $28.7 \%$ of the overall professional workforce in WHO. Although that target has been met at headquarters and in the Regional Office for the Americas, no office is close to reaching the $50 \%$ target. Professional women staff are concentrated at the lower end of professional grades: over $60 \%$ of professional women staff are at grades P. 4 and below, whereas $60 \%$ of professional men staff are at grades P. 5 and above. Grade for grade, fewer women than men are in posts with managerial responsibilities (see Annexes 2 and 3). At current female recruitment and promotion rates, the gender parity target set by the Member States cannot be met in the foreseable future (see Annex 4).
3. The setting of targets by the governing bodies and regular progress reports on these issues to the Executive Board and to the staff at large need to be complemented by realistic and decisive implementation strategies. Accordingly, since 21 July 1998 the following steps have been taken to increase the role of women in WHO:

C the Director-General has stated her determination to achieve gender parity;
C more than half of the Executive Directors appointed were women;
C special recruitment provisions have been introduced to identify women candidates;
C a $60 \%$ recruitment threshold for women in the professional and higher graded categories has been established, which will enable gender parity to be achieved by 2010, assuming current attrition rates. At headquarters, Executive Directors will establish targets and strategies for each cluster, based on staffing reviews, and will be held accountable, through the performance management system, for reaching the targets set. The Director-General has written to Regional Directors about implementation of the policy in regional and country offices;

C focal points for women have been established in each Management Support Unit (MSU) to support cluster efforts, with a central focal point in the Department of Human Resources Services (HRS). MSUs are responsible for actively promoting and supporting cluster efforts to reach such targets, in particular by assisting managers in locating qualified female candidates and ensuring that gender parity considerations are fully taken into account by selection panels. They are also responsible for monitoring and reporting on progress. HRS is responsible for coordinating such efforts throughout all WHO offices, including the regions, and for preparing statistical and analytical reports for the Director-General and governing bodies. In this context, it is developing a four-part action programme comprising specific initiatives in (i) recruitment/selection/outreach; (ii) career development/representation in internal bodies; (iii) retention/workplace enhancement measures; and (iv) monitoring/accounting/feedback mechanisms. This programme is being developed in full consultation with the clusters and regional management, as well as with staff representatives.
4. It is recalled that resolution WHA50.16 also established a $50 \%$ target for the representation of women as temporary advisers, consultants, and members of scientific and technical advisory groups by 2002. The latest available data (end 1997) show the following picture:

|  | Actual $^{1}$ | Shortfall |
| :--- | :---: | :---: |
| Temporary advisers | $36 \%$ | $14 \%$ |
| Members of scientific and technical advisory groups | $29 \%$ | $21 \%$ |
| Short-term consultants | approx. | $35 \%$ |

5. To reach the $50 \%$ target it is proposed that:

C the shortfall for each group should be reduced by at least one-third over each of the next three years, with the aim of reporting a $50 \%$ overall representation to the Fifty-fifth World Health Assembly;

C annual monitoring reports will be presented to the Executive Board and remedial measures adjusted as necessary, depending on progress;

C while $50 \%$ of the overall membership of scientific and technical advisory groups and of expert committees should be women, a $10 \%$ representation margin will be acceptable in either direction for any one group/committee;

C for short-term consultants, parity should be sought at all professional levels and the total number of work-days will be taken into account;

C Regional Directors and Executive Directors will be held accountable for reaching the above targets, while directors will be held responsible for identifying women for committee memberships and shortterm consultancies.

[^0]6. Annual statistical reports on women's representation, including temporary advisers and short-term consultants, will be incorporated into a workforce profile report, which will track and analyse data not only by gender, but also by age, geographical distribution, turnover, type of contract and other characteristics.

## ACTION BY THE HEALTH ASSEMBLY

7. The Health Assembly is invited to note the report.

## ANNEX 1

TARGETS FOR THE REPRESENTATION OF WOMEN IN PROFESSIONAL AND HIGHER GRADES IN WHO

| Year | Reference | Target | Time frame |
| :--- | :---: | :---: | :--- |
| 1979 | EB63.R25 | $20 \%$ | Not stated |
| 1985 | WHA38.12 | $30 \%$ | Not stated |
| 1993 | EB91.R16 | $30 \%$ | By 30 September 1995 |
| 1997 | WHA50.16 | (a) $50 \%$ (representation in <br> professional categories) | Not stated |
|  | (b) $50 \%$ (recruitment rate) | 2002 |  |
