WRITTEN STATEMENT OF THE INDONESIAN DELEGATION
ON
AGENDA ITEM 34.1. PROGRESS REPORT
RESOLUTION WHA68.2 GLOBAL TECHNICAL STRATEGY AND TARGETS FOR MALARIA 2016-2030
AT
THE 74TH WORLD HEALTH ASSEMBLY
24 MAY – 1 JUNE 2021

Indonesia is committed to achieve the malaria elimination and has put malaria as one of the priorities of the national medium-term development plan 2020-2024 to allow for a multi-sectoral approach to prevent and control malaria.

Furthermore, Indonesia has adopted a National Action Plan for the Acceleration of Malaria Elimination 2020-2024 which outlines policies, strategy, and direction for malaria control program implementation to achieve malaria elimination by 2030.

Indonesia's malaria elimination strategy is implemented through 5 policies, as follows:

- Ensuring universal access to malaria prevention, diagnosis, and therapy;
- Accelerating the attainment and maintenance of a malaria-free status;
- Transforming the malaria surveillance system as our main intervention;
- Creating an environment that supports malaria elimination by strengthening the capacity of the national health system, political commitment and community mobilization, and increasing partnership; and
- Increasing services through innovation and research.

These policies are expected to result in the attainment of the goal described in Indonesia's National Action Plan for the Acceleration of Malaria Elimination 2020-2024.
