

REPUBLIC OF THE PHILIPPINES

77th World Health Assembly
Geneva, Switzerland / 27 May 2024

Agenda	11.3	Draft global action plan for infection prevention and control
	11.4	Immunization Agenda 2030
	11.5	End TB Strategy

The Philippines strongly supports the global efforts to enhance Infection Prevention and Control (IPC), achieve the Immunization Agenda 2030, and implement the End TB Strategy. These initiatives align with the country's commitment to improving public health and addressing critical health challenges.

Resource-limited countries face challenges in achieving IPC targets due to insufficient financing and technological constraints. Equitable access to vaccines is hindered by pricing and intellectual property issues. Trust issues, such as misinformation and vaccine hesitancy, complicate immunization efforts and TB control. Managing the infodemic is essential. Access to affordable vaccine products and innovative equipment remains limited. TB elimination is further impeded by underfunding and lack of multisectoral collaboration.

The Philippines proposes adopting a comprehensive IPC action plan (2024–2030), emphasizing evidence-based, locally adapted guidelines. We advocate for a global policy on equitable vaccine access and enhanced political commitment to adequate TB and immunization resources. The Philippine Acceleration Action Plan for TB (PAAP TB) 2023-2035 integrates efforts from various sectors and accelerates health technology assessments. Implementing UHC coverage policies and regulatory frameworks is also crucial.

These interventions will strengthen IPC practices, reduce zero-dose children, and increase fully immunized children coverage to 95%. Enhanced vaccine access and robust TB strategies will significantly reduce TB incidence and mortality, improving overall public health and crisis preparedness.

Member states are urged to adopt the global IPC action plan and monitoring framework for 2024–2030. Global partners should support countries through coordinated planning, technology transfer, and combating misinformation. Strengthening political and financial commitments to immunization and

TB control within integrated primary healthcare systems is essential. By uniting efforts and leveraging global partnerships, we can advance global health outcomes and ensure a healthier future for all.

The **Philippines** strongly supports / the global efforts to enhance / **Infection Prevention and Control (IPC)**, / achieve the **Immunization Agenda 2030**, / and implement the **End TB Strategy**. / These initiatives align with the country's commitment / to improving public health / and addressing critical health challenges.
