

**Statement by the Islamic Republic of Iran on
the Global Strategy on Digital Health 2020–2025**

The Islamic Republic of Iran welcomes and supports WHO Global Strategy on Digital Health 2020–2025. We underscore the importance of leveraging digital technologies to improve health outcomes, strengthen national health systems, and advance universal health coverage in line with the health-related Sustainable Development Goals.

For several years, Iran has invested in the digital transformation of its health sector. We would like to inform that a comprehensive and integrated Electronic Health Record (EHR) system has been successfully implemented nationwide. The system securely stores and manages the complete health information of all citizens, from the embryonic stage through lifelong course care. It includes clinical, pharmaceutical, diagnostic, immunization, and behavioral health data, forming a lifelong health record for every individual.

In addition, national-level health service management systems are in place across the country, enabling real-time monitoring, optimized resource allocation, and improved access to services. Those digital infrastructures support evidence-based policymaking and decision-making at all levels of the health system. The EHR has played a pivotal role in managing disease outbreaks, including COVID-19, by enabling timely surveillance, contact tracing, and targeted interventions.

We believe that people-centered and equity-driven digital health solutions are critical in building resilient health systems. The Islamic Republic of Iran supports WHO's emphasis on strong governance, national strategy development, and capacity building for digital health. Our experience demonstrates that integrated digital tools can enhance health literacy, reduce disparities, and improve the quality of care.

We advocate for sustained international collaboration, equitable access to digital technologies, and the development of shared standards to promote global digital health equity. The Islamic Republic of Iran remains committed to advancing digital health and actively participating in regional and global efforts through knowledge exchange and technical cooperation.
