

**Statement of I.R. Iran on:
Integrated emergency, critical and operative care for universal health
coverage and protection from health emergencies (resolution
WHA76.2 (2023))**

Honorable Chair, Distinguished Delegates,

The Iranian delegation is honored to offer its view point regarding the important issue of Integrated Emergency, Critical, and Operative (ECO) Care, as outlined in Resolution WHA76.2. Achieving Universal Health Coverage (UHC) requires strong emergency and critical care systems that can effectively respond to both daily health needs and urgent crises.

The commitment of the World Health Organization (WHO) in supporting Member States to expand policy-making, enhance technical capacity, and improve clinical expertise is commendable. Strengthening integrated planning and international cooperation ensures equitable access to life-saving services. We also appreciate the WHO Secretariat's efforts in developing guidelines, digital resources, and technical assistance to improve emergency response mechanisms.

Islamic Republic of Iran is committed to developing a national strategy aligned with the global action plan for 2026–2035. Given its extensive experience in crisis management and health system resilience, Iran recognizes the necessity of evidence-based interventions and innovative financing mechanisms to strengthen emergency care services. WHO-supported research demonstrating significant hospital mortality reduction through structured training and emergency tools highlights the urgent need for widespread implementation.

Furthermore, we emphasize the importance of regional and global collaboration in refining emergency care policies. The establishment of the Acute Care Action Network (ACAN) is a valuable initiative that promotes coordinated implementation and knowledge exchange. The Islamic Republic of Iran remains eager to be engaged in global discussions in specially at EMRO to align its health system with international best practices while addressing its national needs.

Iran stands ready to contribute to collective efforts, globally and regionally, in integrating emergency care within UHC frameworks. We urge WHO to continue capacity-building support, knowledge dissemination, and cross-country collaboration to ensure high-quality ECO services reach all populations, especially the most vulnerable.

Thank you.
