

79^{ème} Assemblée mondiale de la santé (18. - 23.05.2026)

Examen du point:

12.10: Harmonization of regulatory approaches, governance and standards for data, digital and artificial intelligence in the health sector

Déclaration de la délégation suisse

Thank you chair,

Health data, interoperable information systems, and AI are closely interconnected. Digital health should remain focused on improving quality of care, patient safety and equitable and sustainable health systems.

Switzerland therefore welcomes the continued work on the development of the new global digital health strategy.

In this regard, we encourage that AI readiness be addressed to ensure health systems can safely and effectively adopt AI-driven solutions. Switzerland further emphasizes the importance of trusted official health data and of addressing misinformation and disinformation in the health sector. High-quality and reliable health data is essential for evidence-based health policy and for maintaining public trust.

For the ongoing work on this subject, meaningful cooperation with all relevant organizations and stakeholders is key to leveraging synergies and ensuring alignment with national contexts and international priorities. Among those stakeholders, it is important to recognize young people. We encourage all delegations to include the voices of those who are growing up alongside AI tools and digital technologies and who are increasingly navigating health through digital systems.

In line with this continued commitment to advancing digital health and trusted data, Switzerland is honored to host the Global AI Summit here in Geneva in 2027. This summit will provide a concrete impetus for globally sustainable AI governance, which is also critical to global public health.

Thank you.
