RELATIVE IMPORTANCE OF HEALTH SYSTEM GOALS

To answer the following questions, you need to understand what is meant by the term “Health System Goals”.

The main goals of a health system of a country are:

1. Improving the health of the population (both the level and equality of health)
2. Improving responsiveness of the health system (both the level and the equality)
3. Fairness in financial contribution.

These goals mean the following:

1. Improving the health of the population

- The whole population lives longer
- The whole population lives with less illness
- There is more equality in length and quality of life and illness

2. Improving responsiveness of the health system,

- The health system respects the rights of the individual for dignity, autonomy, confidentiality and clear communication.
- The health system provides basic amenities in a prompt way, allows adequate social support and gives people a choice of provider.
- The health system treats all people equally with respect to the above issues.

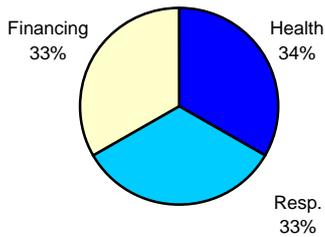

3. Fairness in financial contribution:

- Every household should pay a fair share towards the health system.
- This means that healthy people share costs for the services for the ill; and richer people subsidize the services for the poor.
