STUDY TYPE

World Health Survey [hh/whs]

SERIES INFORMATION

The World Health Survey Plus (WHS+) is the first wave of the study. WHS+ surveys are designed by the World Health Organization and implemented by national agencies in participating countries.

ABSTRACT

The World Health Survey Plus (WHS+) is the World Health Organization's flagship household survey programme, which is hosted by the Survey Unit within the Department of Data and Analytics (DNA) in the Division of Data Analytics and Delivery for Impact (DDI).

The WHS+ is focused on generating data needed to align with shifting data needs in health programming, policy and analysis, while also working to strengthen household survey systems in member countries.

WHS+ builds on WHO's experience with generating, analyzing and disseminating representative data from household surveys in over 101 countries.

The WHS+ provides a data collection system for countries to monitor their progress towards population health targets, health-related SDGs, and WHO's impact framework.

The WHS+ will drive measurement of strategic health goals and add value to countries' data collection.

AIM

The aim of the WHS+ is to generate valid, reliable, comparable and timely information on a range of health and well-being outcomes and determinants of public health importance in nationally representative target populations. The results from the WHS+ will support WHO member states to track progress on country-specific objectives and towards Universal Health Coverage (UHC) and HR-SDG targets, and WHO's Impact Framework approved by Member States.

PRIMARY OBJECTIVES

Create a robust multi-functional data collection platform for generating data to monitor progress on national priorities, HR-SDGs and UHC.

Support countries to generate, analyse and use high-quality data to fill data gaps.

Develop standardized, computerized data collection strategies that enable speedier data collection and more reliable comparison across countries.

ADDITIONAL OBJECTIVES

Develop capacities in using evidence for policy

Institutionalize a regular data generation platform in countries

Provide tools and methods for better sequencing and coordination between studies

Pursue improvements in integrating survey data into health information systems

Provide methods for the inclusion of neglected topics and population groups

Build on post-census surveys with up-to-date sampling frames

Introduce a suite of data collection and analysis tools to use alongside National Statistics Offices and the United Nations Statistics Division

VERSION DESCRIPTION

v0.1: Edited, weighted anonymous dataset for public distribution.

VERSION DATE

2025-12-31

Scope

NOTES

The scope of the World Health Survey Plus includes:

HOUSEHOLD: household characteristics, migration, housing, water sanitation and hygiene, clean fuels, assets and household income, household expenditure.

INDIVIDUAL: socio demographic characteristics, Covid-19 vaccination, health state, assistive technology, anthropometrics, performance tests and biomarkers, tobacco use, alcohol use, diet, physical activity, chronic conditions and health service coverage, accidents/injuries, antimicrobial resistance, health care utilisation, social networks, quality of life, preventing unsafe abortion.

TOPICS

Topic	Vocabulary
World Health Survey Plus (WHS+)	Survey

KEYWORDS

Keyword	Vocabulary	URI
Abortion, Air pollution, Alcohol, Anaemia, Antimicrobial resistance, Assistive technology, Cancer, Cardiovascular disease, Cervical cancer, Chronic respiratory diseases, Coronavirus disease (COVID-19), Deafness and hearing loss, Depression, Diabetes, Disability, Drowning, Eye care vision impairment and blindness, Financial protection, Food safety, Health equity, Health financing, Health workforce, Healthy diet, Hospitals, Hypertension, Mental health, Noncommunicable diseases, Nutrition, Obesity, Oral Health, Physical activity, Primary health care, Quality of care, Road traffic injuries, Refugee and migrant health, Social determinants of health, Suicide, Tobacco, Traditional Complementary and Integrative Medicine, Universal Health Coverage, Vaccines and immunization, Violence against women, Water sanitation and hygiene (WASH)	WHO Health topics	Link

Coverage

GEOGRAPHIC COVERAGE

Cox's Bazar Refugee Camp

UNIVERSE

The WHS+ will include all male and female adults (18 years of age and older) who are not out of the Cox's Bazar Refugee Camp during the survey period. It should be noted that this includes the population who may be institutionalized for health reasons at the time of the survey: all persons who would have fit the definition of household member at the time of their institutionalisation are included in the eligible population.

The target population includes any adult, male or female age 18 or over living in camp households. People who are in an institution due to a health condition (such as a hospital, hospice, nursing home, home for the aged, etc.) at the time of the visit to the household are interviewed either in the institution or upon their return to their household if this is within a period of two weeks from the first visit to the household.

Sampling

SAMPLING PROCEDURE

The proposed sample size was 800 families, from which a single eligible individual was sampled to answer the more detailed individual questionnaire.

Under Simple Random Sampling (SRS), this sample size would enable estimating any proportion with a standard error no larger than 2%.

This target sample size was agreeable given the expected costs and available budget for the survey.

The sampling frame used to select the sample of families was provided by UNHCR.

This file contained a list of blocks in each of the 34 refugee camps that could be part of the survey.

The camp 'Bhasan Char' was excluded from the survey population due to the high costs of surveying there.

Out of the 33 remaining camps, 1,361 families with 'missing block information' were also excluded from the sampling.

These represent a small fraction (0.7%) of the families living in the 33 camps to be surveyed.

The frame used for sampling therefore contained a total of 178 blocks nested within the 33 camps, and for each of these camps, there was information on the number of families and persons living in the block.

The total number of families was 193,452.

From this frame, a conceptual list of families was created, by duplicating each block's record once for each of the families living in it (say Nb), and numbering the families from 1 to Nb within each block.

The sampling of families was carried out by stratified simple random sampling without replacement (STSRs).

The allocation of the total sample within the camps was approximately proportional to the number of families living in each camp, but with lower and upper limits of 12 and 28 sampled families per camp, respectively.

Distribution of the camp sample sizes within the camp's blocks was close to equal, but the largest blocks received slightly larger sample sizes, always such that the sum of the block sample sizes matched the sample size allocated to the corresponding camp.

The sample of families was provided in an Excel spreadsheet called 'families_sample.xlsx'. In this file, each line contains a selected family, identified by the block id 'block_ssId' and the 'family_id'.

This last variable corresponds to the number of the family to be selected from the family list of each block, whatever the order these families are listed in the original family list.

For individual interviews, one person aged 18 or older per household was eligible to participate.

The eligible individual was selected with equal probabilities using the CAPI program from a list of eligible household members.

Stages of selection

Strata: Camp = 33

PSU: Blocks=162 surveyed

SSU: Families=685 surveyed

TSU: Individuals=685 surveyed

RESPONSE RATE

Response rates

response rate=% of households/persons who completed the interviews amongst all eligible households/persons, including those who were not successfully contacted.

Household

Response rate=85%

Individual:

Response rate=84%

WEIGHTING

Weights

Household weights(variable hhweight) for analysis at household level and individual weights(variable pweight) for analysis at person level were calculated.

Basic household and person weights were computed as the reciprocals of their corresponding selection probabilities, considering all stages of selection.

Basic household weights were then calibrated to population totals by camp, sex and age groups (18-59, 60+) according to the GoB-UNHCR Joint Registration Exercise.

Calibration was done on the marginal distributions, using raking, and was such that all individuals within a sampled household would have the same calibrated weight.

Basic individual weights were calibrated to population totals by sex, age-groups (18-59, 60+), and camp according to the the GoB-UNHCR Joint Registration Exercise.

Calibration was done on the marginal distributions, using raking.

Weights are not normalised, and their sum over the total sample will return estimates of population sizes.

Where the hhweight and/or pweight has a missing value this is because either the sampling information is missing or the sex, age is missing.

Data collection

DATES OF DATA COLLECTION

Start	End
2024-09-15	2024-09-29

DATA COLLECTION MODE

Computer Assisted Personal Interview [capi]

DATA COLLECTION NOTES

Dhaka Ahsania Mission (DAM), conducted an awareness campaign prior to data collection.

A refresher training workshop was held 9-11 September in Cox's Bazar to prepare the data collection teams.

There were 3 teams in total: two comprised one supervisor, six interviewers and one biomarker collector each, while the third team had an additional interviewer bringing the total personnel to 25.

Interviewers were selected from the pool of those who participated in the national World Health Survey Plus Bangladesh conducted in 2023, based on their performance and their proficiency in the local dialect.

Data collection was carried out from 15-29 September 2024, with a pause on 16 September for a government holiday and on weekends, amounting to a total of 10 working days.

Geo-coordinates were available for only 266 of the 800 families.

Therefore maps for the households were provided by the HQ GIS Centre for Health to navigate the blocks with more ease. Teams were also escorted by field monitors from UNHCR and the WHO sub-office in Cox's Bazar to ensure that the correct families were being interviewed.

Due to security concerns and camps that were difficult to reach, camps 15 (36 families) and 27 (16 families) were not visited.

Additionally several blocks were not surveyed: block A in camp 8W (4 families), block G in camp 9 (5 families), block F in camp 13(5 families), and block D in camp 24 (2 families).

In total, 15 blocks and 68 families were not visited.

Questionnaires

QUESTIONNAIRES

The WHS+ questionnaires were based on the SAGE questionnaires with some modifications and many new modules.

A Household questionnaire was administered to all households eligible for the study.

An Individual questionnaire was administered to eligible respondents identified from the household roster by the CAPI programme.

The questionnaires were developed in English. The CAPI template produced by Survey Solution Designer was translated into Banglail.

The English questionnaires are available as external resources.

Data Processing

DATA EDITING

Data editing took place at a number of stages including:

- (1) office editing and coding
- (2) during data entry
- (3) structural checking of the Stata data files
