### NOTES SUR LES UNITÉS GÉOGRAPHIQUES — NOTE ON GEOGRAPHIC AREAS

Il ne faudrait pas conclure de la présentation adoptée dans le *Relevé épidémiologique hebdomadaire* que l'Organisation Mondiale de la Santé admet ou reconnaît officiellement le statut ou les limites des territoires mentionnés. Ce mode de présentation n'a d'autre objet que de donner un cadre géographique aux renseignements publiés. La même réserve vaut également pour toutes les notes et explications relatives aux pays et territoires qui figurent dans les tableaux. Les « circonscriptions » (voir définition de ce terme dans le Règlement sanitaire international) sont présentées suivant les notifications reçues des administrations sanitaires.

The form of presentation in the *Weekly Epidemiological Record* does not imply official endorsement or acceptance by the World Health Organization of the status or boundaries of the territories as listed or described. It has been adopted solely for the purpose of providing a convenient geographic basis for the information herein. The same qualification applies to all notes and explanations concerning the geographic units for which data are provided. Local areas under the International Sanitary Regulations are presented as designated by health administrations.

*Hong Kong.* —<sup>1</sup> Un deuxième cas de choléra El Tor a été confirmé le 29 juin. Le premier malade (cas observé dans l'île de Hong Kong) fut assez gravement atteint, alors que le deuxième cas (à Kowloon) est relativement bénin. L'origine commune de l'infection n'a pu être établie.

Vingt contacts ont été isolés; 5 d'entre eux étaient porteurs de germes, mais ne présentaient pas de symptômes cliniques de la maladie. Tous les contacts, porteurs de germes, demeurent à l'isolement jusqu'à ce que les examens de 3 prélèvements rectaux consécutifs aient donné des résultats négatifs.

Le 11 juillet, la situation était inchangée.

<sup>1</sup> Voir N° 27, p. 347.

*Hong Kong.* —<sup>1</sup> A second case of cholera El Tor was confirmed on 29 June. The first case (from Hong Kong Island) was moderately severe; the second (from Kowloon) is relatively mild. No common source of infection has been identified.

Twenty contacts were isolated, including 5 carriers none of whom had clinical symptoms of cholera. All contact carriers remain in isolation until 3 consecutive negative rectal swabbings are obtained.

On 11 July, the situation was unchanged.
