Health Emergency Information and Risk Assessment
Overview

This Weekly Bulletin focuses on public health emergencies occurring in the WHO African Region. The WHO Health Emergencies Programme is currently monitoring 68 events in the region. This week’s main articles cover key new and ongoing events, including:

- Measles in Chad
- Ebola virus disease in Democratic Republic of the Congo
- Humanitarian crisis in Democratic Republic of the Congo
- Humanitarian crisis in Mali

For each of these events, a brief description, followed by public health measures implemented and an interpretation of the situation is provided.

A table is provided at the end of the bulletin with information on all new and ongoing public health events currently being monitored in the region, as well as recent events that have largely been controlled and thus closed.

Major issues and challenges include:

- The measles outbreak in Chad is still ongoing. Although the weekly case incidence has been on a decreasing trend since June 2019, cases and deaths continue to be reported in several districts. In order to bring this outbreak to an end, there is a need to strengthen vaccination activities in all affected districts.

- The continuing complex humanitarian crisis in Democratic Republic of the Congo is of grave concern leading to an ever shrinking humanitarian space with large areas of the country, and consequently large populations, remaining without basic healthcare, WASH infrastructure and an inability to live normal lives. There is weak coordination of responses to and prevention of various infectious disease outbreaks at all levels, with insufficient information sharing between partners, leading to gaps in response. Insufficient funding further complicates these issues.
**EVENT DESCRIPTION**

The measles outbreak in Chad has been ongoing since mid-2018. In week 1 of 2020 (week ending 5 January 2020), 123 suspected measles cases were reported from 22 of the 126 districts in Chad. During this week, the majority (55%) of cases were reported from three districts: Kyabe (n=34), Bebeto (n=21) and Benoye (n=13). There was one measles-associated death reported from Kelo district giving a case fatality ratio of 0.8% for the week.

Since the peak of the outbreak in week 22 (week ending 2 June 2019), when 1 374 suspected cases were reported, the number of suspected cases reported weekly has been on a decreasing trend until it plateaued in week 30 (week ending 28 July 2019) with an average of 150 suspected cases reported weekly until the end of the year.

From week 1 to 52 of 2019, a total of 26 623 suspected measles cases with 259 associated deaths (case fatality ratio 1.0%) was reported. Among these, 455 serum samples were collected for laboratory analyses, 296 (65%) of which were IgM positive for measles virus. During the same period, seven districts reported over 1 000 suspected cases: Bousso (2 307 cases), East N’Djamena (1 706 cases), Moundou (1 680 cases), Am Timan (1 674 cases), N’Djamena South (1 521 cases), N’Djamena Centre (1 348 cases) and Bongor (1 345 cases). These districts alone accounted for 43.5% of suspected measles cases reported in the country. The most affected age group was children less than 10 years of age, accounting for 78% of the affected population.

Of the 1 895 cases investigated from week 1 to week 52 of 2019, 1 531 (81%) had not been previously vaccinated for measles. Furthermore, according to the WHO/UNICEF estimates of National Immunization Coverage, the vaccination coverage for measles containing vaccine 1 (MCV1) has remained low in the country with a ten-year average of 45% and an annual coverage of 37% in 2018. These coverages are nowhere near the Global Vaccine Action Plan 2011–2020 (GVAP) target endorsed by the World Health assembly in 2012, which calls on all countries to reach ≥90% national coverage with all vaccines in the country’s national immunization schedule by 2020.

**PUBLIC HEALTH ACTIONS**

- Between 12 and 18 December 2019, a measles vaccination campaign targeting 424 507 children aged between 0 and 59 months was conducted in 14 health districts (Moulkou, Bahai, Benoye, Moundou, Beinamar, Bebedja, Doba, Goré, Laramanaye, Donia, PontCarol, Maro, Lai and Donomanga).
- The Measles Task Force, comprising the Ministry of Health, WHO, UNICEF and other partners, continues to coordinate the outbreak response activities.
- WHO continues to provide technical support for the production of information products including the preparation and dissemination of a weekly situation report on the evolution and the management of the outbreak.

**SITUATION INTERPRETATION**

The measles outbreak in Chad has been ongoing since mid-2018. Following several rounds of vaccination campaigns, the case incidence has been on decreasing trend. With the vaccination coverages in the country remaining constantly suboptimal, significant investments should be made by the government and health partners to improve the vaccination coverage through the implementation of high quality supplemental immunization activities while the challenges being faced with routine immunization are being identified and resolved.
EVENT DESCRIPTION

The Ebola virus disease (EVD) outbreak in North Kivu, South Kivu and Ituri provinces in Democratic Republic of the Congo continues, with six health zones and 13 health areas reporting confirmed cases in the past 21 days (29 December 2019 to 18 January 2020). Since our last report on 12 January 2020 (Weekly Bulletin 2), there have been 16 new confirmed cases and two new deaths. The principle hot spots of the outbreak in the past 21 days are Mabalako (35%; n=13 cases), Beni (27%; n=10), Butembo (19%; n=7), and Mambasa (11%; n=4). Two health zones, Beni and Mabalako, have reported new confirmed cases in the past seven days.

As of 18 January 2020, a total of 3 412 EVD cases, including 3 293 confirmed and 119 probable cases have been reported. To date, confirmed cases have been reported from 29 health zones: Ariwara (1), Bunia (4), Komanda (56), Lolwa (6), Mambasa (82), Mandima (347), Nyakunde (2), Rwampara (8) and Tchomia (2) in Ituri Province; Alimbongo (5), Beni (705), Biena (19), Butembo (295), Goma (1), Kalunguta (198), Katwa (653), Kayna (28), Kyondo (25), Lubero (31), Mabalako (462), Manguredjipa (18), Masereka (50), Musienene (85), Mutwanga (32), Nyiragongo (3), Oicha (65), Pinga (1) and Vuhovi (103) in North Kivu Province and Mwenga (6) in South Kivu Province.

As of 18 January 2020, a total of 2 237 deaths were recorded, including 2 118 among confirmed cases, resulting in a case fatality ratio among confirmed cases of 64% (2 118/3 293). As of 18 January 2020, the total number of health workers affected has risen to 171, still representing 5% of confirmed and probable cases.

Contact tracing is ongoing in seven health zones. A total of 2 688 contacts are under follow-up as of 18 January 2020, of which 2 539 (94.5%) have been seen in the past 24 hours. Alerts in the affected provinces continue to be raised and investigated. Of 5 018 alerts processed (of which 4 939 were new) in reporting health zones on 18 January 2020, 4 916 were investigated and 438 (8.9%) were validated as suspected cases.

PUBLIC HEALTH ACTIONS

- Response and surveillance activities continue in all affected areas. However, there was an attack on response teams in Masereka during the reporting period, and the security situation in Bunia is precarious.
- As of 18 January 2020, a cumulative total of 269 480 people have been vaccinated since the start of the outbreak in August 2018.
- Point of Entry/Point of Control (PoE/PoC) screening continues, with over 140 million screenings to date. A total of 106/109 (97.2%) PoE/PoC transmitted reports as of 18 January 2020.
- Water, sanitation and hygiene (WASH) activities continue, with 16 health facilities evaluated in Beni and Mabalako health zones and 283 hand washing points evaluated in Oicha, Mabalako and Mambasa.

SITUATION INTERPRETATION

New confirmed cases continue to be reported in Beni, Mabalako and Butembo in North Kivu Province in areas that have not seen new cases for several weeks. Resistance to response activities continues, particularly in North Kivu Province, which continues to hamper response efforts, with resulting resurgence of transmission. There are continued efforts to engage with the community and to upscale response activities in affected regions in order to bring the outbreak to a close.
EVENT DESCRIPTION

The complex and protracted humanitarian crisis that has plagued Democratic Republic of the Congo continues, characterized by continuing insecurity and conflict. Ituri and North Kivu provinces are particularly affected, which is of grave concern in the light of the ongoing Ebola virus disease outbreak in these provinces as well as the large measles outbreak affecting much of the country.

In Ituri Province, clashes between armed groups in the coastal part of Lake Albert led to population displacement of several villages into more stable areas. This resumption of violence is likely to interrupt return movement of people previously displaced from this coastal area, which had started in August 2019. Additionally, the coastal area of Lake Albert is currently inaccessible to humanitarians. In Bunia, several dwellings and crops in fields were destroyed by fires that were deliberately set by unknown persons and people have been displaced to surrounding villages. In Mahagi Territory, 26 civilians were wounded in a machete attack during the night of 28-29 December 2019. In Mambasa there has been massive population displacement from Lwemba to Biakato, Mambasa Centre and to North Kivu following threats of attacks by militiamen. Internally displaced persons (IDPs) from the Katiroga site in Bunia Health Zone have not received humanitarian assistance for more than six months and water, sanitation and hygiene (WASH) is currently unavailable in the area and humanitarian partners working in the area have been notified.

In South Kivu Province operations against rebels in the Kalehe Highlands resulted in the capture and transfer of 1 500 dependents to a military camp near Bukavu who were then repatriated to Rwanda with UNHCR support. There are 263,252 IDPs still present in Itombwe, Fizi, Nundu and Minembwe reception areas. On 27 December 2019 one member of UNHCR staff and two UNHCR guards were abducted, but then released on 30 December 2019, resulting in Fizi Territory being classified ‘red’ following the incident.

Epidemic-prone diseases continue. During week 52 of 2019 (week ending 28 December 2019) the main causes of morbidity were malaria, acute respiratory infections and typhoid fever, with 316,330, ending 28 December 2019) the main causes of morbidity were malaria, acute respiratory infections and typhoid fever, with 316,330, 56,310 and 8,638 cases respectively. The trends in epidemiological surveillance data have continued to show stabilization in most provinces. In reports from the Democratic Republic of Congo (DRC), the number of malaria cases during week 52 of 2019 was 6,300, with 85% of these cases reported in South Kivu, North Kivu, Tanganyika, Tshopo and Haut-Lomami. However, overall the trend has been declining since week 37 of 2019 (week ending 14 September 2019), with a slight increase in week 52. Endemic Five provinces (South Kivu, North Kivu, Tanganyika, Tshopo and Haut-Lomami) reported 85% of these cases. However, overall the trend has been declining since week 37 of 2019 (week ending 14 September 2019), with a slight increase in week 52. Endemic provinces reported 80% of cases in week 52.

PUBLIC HEALTH ACTIONS

- WHO continues to coordinate response to humanitarian emergencies and epidemiological surveillance, along with capacity building in IT and community-based surveillance.
- WHO and partners (Médicines Sans Frontières, CARITAS, UNICEF etc.) continue to provide free medical care and provision of kits, WASH interventions, care for malnourished children and dignity kits to vulnerable displaced women and children, including survivors of sexual violence in Kananga Health Zone, Kasai-Central Province.
- The cholera response continues in affected areas with the support of WHO and other partners.
- The cholera response plan covering September to December 2019, developed jointly with PNECHOL-MD and funded by WHO continues, with implementation of priority response activities in major outbreaks. In addition, WHO-supported field experts continue to provide technical support to the main outbreaks, which are supplied with case management inputs, including laboratory input for case confirmation.
- Response to the vaccine-derived poliomyelitis (VDPV2) continues, with preparation for immunization activities in Upper Lomami Province from 9-11 January 2020, and round 1 immunization activities scheduled for 23-25 January 2020 in Kwango and Kwilu provinces; active case search visits are being conducted with the e-Survev tool, along with completion of 16 formative supervision visits integrated with the ISS tool.
- Response to the bubonic plague outbreak is underway with coordination meetings, awareness measures and epidemiological surveillance and active case search.

SITUATION INTERPRETATION

Continuing insecurity and major infectious disease outbreaks persist in Democratic Republic of the Congo, driving this ongoing humanitarian crisis. There is no sign of this abating. Local and national authorities and partners continue to mount robust responses to ongoing infectious disease outbreaks in the face of shrinking humanitarian space and the constant danger of personal injury. Intervention at national and international level is urgently needed to bring an end to this large and complex crisis.
**EVENT DESCRIPTION**

The humanitarian crisis in Mali is long-standing and complex. At the end of 2019 the Committee on Population Movement reported 201,429 internally displaced persons (IDPs), which equates to 37,302 households. Of these IDPs 54% are women and 53% are under the age of 18. There are 138,659 Malian refugees in neighbouring countries, and 74,733 returnees. The health situation in this context remains precarious, with few of these populations receiving basic medical care due to lack of access, as a result of non-functioning health structures and a limited presence of partners working in primary health. This has resulted in low immunization coverage, with an estimated 69.8% of children immunized against measles in 2018 according to the Mali Demographic and Health Survey. Emergency reproductive, obstetric and neonatal health services are also severely affected, with only 50% of women giving birth with the assistance of qualified health personnel. The north and central regions of the country are particularly affected, specifically Gao, Kidal, Tombouctou, Mopti and Ségou regions. Currently less than 7% of the State budget is allocated to health and the Humanitarian Response Plan (2019) is only 50% funded in the health sector.

Outbreaks of epidemic-prone diseases persist. As of 12 January 2020 meningitis, measles, yellow fever and acute flaccid paralysis have been reported from 11 regions of the country (Kayes, Koulikoro, Sikasso, Ségou, Mopti, Tombouctou, Gao, Kidal, Ménaka, Taoudénit and Bamako). From 6-12 January 2020 there have been 45,094 suspected cases of malaria, of which 24,892 tested positive for the disease, with nine deaths (case fatality ratio 0.023%).

A total of 3,572 cases of acute malnutrition were reported as of 12 January 2020, 53% of which are severe acute malnutrition. In addition, 13 malnutrition-related deaths have been reported so far in 2020.

**PUBLIC HEALTH ACTIONS**

- At the start of 2020, 1.47 million persons in need have been identified and will be prioritized by the health cluster, including 404,400 women of childbearing age (15 to 49 years), of whom 160,000 will be pregnant and will require reproductive health services and gender-based violence services. More than 400,000 children under the age of five have been targeted to receive preventive, curative and promotional health services.
- Partners in the health cluster continue to respond to humanitarian needs, strengthening health information systems, strengthening outbreak preparedness systems, and ensuring access to services.
- Incident Managers continue to be trained for field response by the Direction des Opérations d’Urgence en Santé Publique.

**SITUATION INTERPRETATION**

The situation in Mali continues to be of concern with no letup in the insecurity that has characterized this humanitarian crisis, resulting in persistent gaps in humanitarian access and low coverage of community-based activities and no emergency kits available. In addition, there are limited funds to recruit staff, including those in the WHO Country Office. Funding is urgently required to complete the health portion of the Humanitarian Response Plan and to provide the necessary staff for health-related response. National and international authorities and partners need to address the underlying drivers of the insecurity to try to alleviate the situation for these vulnerable populations.

---

**Map of Internally Displaced Persons in Mali, as of September 2019**

**IDP CONCENTRATION MAP**

As of September 2019

SOURCE: UNHCR/WFP, 25 Nov 2019
Summary of major issues, challenges and proposed actions

Major issues and challenges

- Although the epidemiologic situation of measles in Chad has improved since the peak of the outbreak, the persistence of measles cases reported in several district is concerning. This is likely the result of persistently insufficient population immunity in different age groups or hard-to-reach populations.

- Democratic Republic of the Congo is plagued by insecurity, infectious disease outbreaks and consequent major population displacement. Basic infrastructure is lacking in most areas, along with poor access to healthcare. Country-wide, coordination is poor and funding insufficient to deal with the many needs.

Proposed actions

- WHO should work closely with partners and national authorities in order to reinforce immunization systems in Chad. Addressing existing gaps in the immunization system should be a priority consideration in planning and conducting the response to this measles outbreak as it is critical to prevent similar outbreaks in the future.

- Democratic Republic of the Congo requires strengthening of the country’s level of preparedness to deal with epidemics and other public health emergencies in the context of a protracted complex humanitarian crisis, as well as the will at national level to improve health and sanitation and hygiene and other infrastructure across the country.
### New Events

WHO was notified of an outbreak of monkeypox on 14 January 2020 by the Ministry of Public Health in Cameroon following the confirmation of the monkeypox case by the Institut Pasteur laboratory on 08 January 2020. The index case is a 13-month-old child from Tomba1 village, health area of Ayos Urbain, Ayos Health district, centre region, who consulted at Arche de Noé health center on 20 December 2019 with signs compatible with monkeypox. The child was referred to the Regional Hospital annex of Ayos, then to Chantal Biya hospital on 24 and 26 December 2019 respectively. The child died on 2 January 2019. The second confirmed case is the mother of the dead child.

### Protracted

Since 2015, the security situation initially in the regions of the Sahel and later in the East of Burkina Faso has gradually deteriorated as a result of attacks by armed groups. This has resulted in mass displacement leading to a total of 560 033 internally displaced persons registered as of 9 December 2019 in all 13 regions in the country. The regions of Sahel, Centre-North, the North, the East and Boucle du Mouhoun are the most affected. Health services are severely affected and as of 9 December 2019, Ministry of Health figures show that 95 health facilities in six regions have closed and 135 others have reduced their services, resulting in no immunization strategies or nigh cove. Morbidity due to epidemic-prone diseases remains high.

Since week 48 of 2018 (week ending 2 December 2018), there has been a progressive increase in the number of malaria cases reported across 46 districts of Burundi, with the epidemic threshold surpassed in week 18 of 2019 (week ending 5 May 2019). In week 51 (week ending 22 December 2019), 152 960 cases including 63 deaths have been reported. There is a 90% increase in the number of cases reported in week 51 of 2019 compared to the same period in 2018.

Cameroon continues to face a humanitarian crisis in the Far North Region linked to the terrorist attacks by Boko Haram group, with significant population displacement. In November 2019, 27 attacks by Boko Haram members have been registered and led to 5 missing people, 32 injuries and 11 deaths. This situation is hindering humanitarian access and limiting operations and has resulted in suspension of activities beyond Fotokol and Makary in Logone and Chari division. The Minawo camp continue to host Nigerian refugees, and as of 31 September 2019, the total camp population was about 59 977 Nigerian refugees. The number of out-of-camp refugees has also grown to 46 784 refugees.

#### Infections in Burundi

- **Malaria**: 52 363 cases (34% increase)
- **Cholera**: 3 856 cases (24%

#### Protracted

#### Protracted

- **Dengue fever** (2019): 125 cases (26%
The humanitarian situation in the Northwest and Southwest (NW & SW) of Cameroon continues to deteriorate with rising tensions between separatists and military forces. Between 9 and 15 December 2019, an estimated 5,475 people (782 households) were forced to flee their villages following a series of military operations and community clashes throughout the North West region. Military operations in the Momo, Mezam, Boyo, Nga Ketunjia, Donga Mantung and Bui Divisions have led to the displacement of 2,775 people, while community clashes in the Boyo division caused 2,700 people to flee their homes. This unrest continues to affect access to basic services including healthcare, education, shelter, food security and WASH.

The cholera outbreak continues to improve in the 3 affected regions of Cameroon (North, Far North and South West). Since, the beginning of the year 2020, cholera cases are reported only from the 2 districts of the South West (Bakassi and Ekondo Titi). No new cases of cholera have been reported in Far North and North regions since epidemiological weeks 51 and 48 respectively. From January 2019 to date, a total of 1,307 cases of cholera, with 55 deaths were reported from the three affected regions and the majority of those cases (57%) were reported from the North region.

No case of cVDPV2 was reported in the past week. On 23 May 2019, WHO received notification through the Global Polio Laboratory Network (GPLN) of the detection of circulating vaccine-derived poliovirus type 2 (cVDPV2) from an environmental sample collected on 20 April 2019 in the Northern Province of Cameroon which borders Borno State in Nigeria and Chad. There are no associated cases of paralysis detected so far.

The Central Africa Republic (CAR) has been hit by torrential rain since October 2019 which has caused significant damage. A total of 83,309 people was affected by the flood, including 15,331 in Bangui and 67,978 people outside Bangui. Currently, the situation is improving and the internally displaced persons are returning to their places of origin. As of 24 December 2019, there were 77,275 people displaced by the floods, with 5,299 displaced in Bangui.

Civil unrest and food insecurity in most parts of the country including major cities are continuing to cause a complex humanitarian situation. The security situation remains tense in Bakassi District after clashes between rival armed groups in Amdafaka and Bihera in the week of 16-22 December 2019. Ten wounded were treated at Birao Hospital, with one requiring evacuation to Bambari Hospital by the International Red Cross. Other wounded are reportedly still in the bush. As of 24 December 2019, there are an estimated 2.5 million people affected, with more than 600,000 internally displaced persons (IDPs) and 601,994 Central African refugees in neighbouring countries.

Since 3 October 2019, heavy rains resulted in floods in 8 out of 12 departments of the Republic of Congo, namely: Likouala, Cuvette, Plateaux, Sangha, Kouilou, Niari, Brazzaville and Pointe-Noire. As a result of the floods, homes and public infrastructure have been destroyed leaving the affected population in precarious living conditions and with limited access to health care. Furthermore, the floods have caused significant damage to the agricultural and farming sectors thus posing a threat to food security. On 19 November 2019, the Congolese government declared a state of emergency in the affected areas. As of 10 December 2019, at least 170,000 people have been affected.
In week 39 (from 23 to 29 September 2019), a total of 9 new chikungunya cases were reported across the country against 56 cases in week 38 and 15 cases in week 37. The hotspots are the departments of Plateaux and Bouenza, accounting for 64% and 14% of cases reported from week 37 to week 39, respectively. Since the beginning of the outbreak, a total of 11 434 cases have been reported in 44 out of the 52 health districts of the country. The affected areas include densely populated zones such as Brazzaville and Pointe-Noire.

Côte d’Ivoire

No case of circulating vaccine-derived poliovirus type 2 (cVDPV2) was reported this week. So far, the only cVDPV2 isolated was from an environmental sample collected on 24 September 2019 in Abidjan. The isolated cVDPV2 is linked to a virus detected in Niger in 2018 that belongs to the Jigawa emergence group, which has previously also been detected in Cameroon, Chad, Niger, Benin, Ghana, and Togo.

Democratic Republic of the Congo

During week 43, the Lomami River, the Tshopo rivers and other tributaries of the Congo River have experienced a rise in water levels as a result of heavy rains. The provinces of South-Ubangi, North-Ubangi and Tshopo were particularly affected by major floods. Significant infrastructural damage was observed in affected health zones including: damage to fields (400), water sources (161), schools (15), toilets (990) and residential houses (4990). Approximately 123 491 people are homeless and lack basic necessities. From November 22 to 25, 2019, the overflowing of the Ulindi River and its tributaries caused floods in several localities of Shabunda territory, the most affected of which are those of Shabunda-Center, Mulungu, Kamulilla and Katchungu. Overall, 500 homes, over 1 300 fish fields and ponds, 3 schools and 1 community training center were destroyed. At least 9,000 people were left homeless throughout the Shabunda Territory.

Democratic Republic of the Congo

Detailed update given above.

Democratic Republic of the Congo

During week 50 (week ending 15 December 2019), a total of 585 suspected cases of cholera and 5 deaths (CFR 0.85%) were notified from 56 health zones in 13 provinces. The provinces of South-Ubangi, North-Ubangi and Tshopo were particularly affected by major floods. Significant infrastructural damage was observed in affected health zones including: damage to fields (400), water sources (161), schools (15), toilets (990) and residential houses (4990). Approximately 123 491 people are homeless and lack basic necessities. From November 22 to 25, 2019, the overflowing of the Ulindi River and its tributaries caused floods in several localities of Shabunda territory, the most affected of which are those of Shabunda-Center, Mulungu, Kamulilla and Katchungu. Democratic Republic of the Congo

Detailed update given above.

Democratic Republic of the Congo

In week 1 (week ending 5 January 2020), 4 983 measles cases including 57 deaths (CFR 1.1%) were reported across the country. There is an increased number of new cases reported in week 1 of 2020 compared to week 52 of 2019. Since the beginning of 2019, 316 550 measles cases including 6 101 deaths (CFR 1.9%) have been recorded in 26 provinces. In total, 253 (49%) of the 519 health zones across the 26 provinces of the country have reported a confirmed measles outbreak. The outbreak is currently active in the western provinces of the country, more precisely in the Maindombe, Tshuapa, Ecuador, Lualaba and Kwilu. A total of 2 717 cases were laboratory confirmed (IgM+).

Democratic Republic of the Congo

Since the beginning of 2019, a cumulative total of 5 117 monkeypox cases, including 104 deaths (CFR 2%) were reported from 19 provinces. Most cases were reported from the provinces of Sankuru (117), Tshuapa (42), Bas-Uele (39) and Equateur (23). A decreasing trend in the number of cases has been noted since week 45. In week 50 (week ending 15 December 2019), 57 cases and one death were reported nationally including 41 cases from Sankuru and 23 cases from Bas-Uele provinces.

Democratic Republic of the Congo

From week 1 to 50 of 2019, a total of 51 cases of bubonic plague including 8 deaths have been reported in the country. Aru health zone in Ituri province accounts for 81% of reported cases. No new cases were reported in week 50. The first five cases were reported during week 10 of 2019 in the Aungba endemic health zone. Two other cases were reported during week 13 (Aru health zone) and 14 (Aungba health zone). The latest cluster of cases was reported between week 39 (7 cases and 3 deaths) and 40 (14 cases) from Aru health zone. The case incidence has been on a steep decline since week 40, following the implementation of repose measures from the Ministry of Health and its partners.

Democratic Republic of the Congo

No new cases of cVDPV2 were reported this week. There are 64 cVDPV2 cases in 2019 reported from Sakuru (21), Haut Lomami (18), Kasai (8), Kwilu (8), Kwango (5), Haut Katanga (2), Tshuapa (1), and Kongo Central (1) provinces. There were 20 cases of cVDPV2 reported in 2018.
Chikungunya cases have reported from Ethiopia since week 31 (week ending 30 July 2019). As of 8 December 2019, 54 908 suspected cases were reported from Dire Dawa City Administrative City (51,957), Araf (2,782) and Somali (169) regions.

In week 48 (week ending 1 December 2019), 82 new suspected cases were reported in Afar and Oromia regions. As of 1 December 2019, a total of 2,089 suspected cases including 21 deaths have been reported from eight regions with Oromia (835 cases), Afar (329), Somali (235), Amhara (191 cases), and Addis Ababa city (157 cases) reporting the majority of cases. A total of 57 cases have been laboratory confirmed.

Between week 37 and week 49 in 2019, a total of 1,251 suspected cases and 6 confirmed cases of dengue fever were reported from Afar region. The peak of the outbreak was observed in week 38 when more than 300 suspected cases were reported.

No new cases of circulating vaccine-derived poliovirus type 2 (cVDPV2) were reported this week. The onsets of paralysis of the last case was on 9 September 2019. A total of five cVDPV2 cases have been reported in Ethiopia in 2019, with four linked to the outbreak in neighbouring Somalia and the fifth case is part of a newly reported Ethiopian outbreak this week.

Two new case of circulating vaccine-derived poliovirus type 2 (cVDPV2) cases were reported in the past week. There are eleven cVDPV2 cases in 2019 linked to the Jigawa outbreak in Nigeria.

A new outbreak of measles has been reported from Pokot North sub county, Alale location. A total of 75 cases have been reported from Kajiado County, Kajiado West Sub-County on 8 September 2019. Twelve of the 47 Counties of Kenya reported cholera cases, namely: Embu, Garissa, Kajiado, Kisumu, Machakos, Makueni, Mander, Mombasa, Nairobi, Narok, Turkana and Wajir Counties. The outbreak remains active in four counties: Garissa, Kirinyaga, Turkana and Wajir.

The measles outbreak in Lesotho is ongoing in Qacha’s Nek district. As of 15 November, a total of 59 suspected cases have been reported, 4 of which are laboratory confirmed. No associated deaths have been reported. The coverage of measles vaccine in the affected area is 65%. The outbreak has affected more females with a M:F ratio of 1:2.

A new outbreak of leishmaniasis has been reported from Mandera, Marsabit, Wajir and Garissa counties. The outbreak remains active in four counties: Garissa, Kirinyaga, Turkana and Wajir.

The measles outbreak in Liberia is ongoing in Lassa fever area. From 1 January - 8 December 2019, a total of 187 suspected cases have been reported across the country. Of samples tested from 153 of the suspected cases at the National Public Health Reference Laboratory of Liberia, 45 were confirmed by RT-PCR and 108 were discarded due to negative test results. The case fatality ratio among confirmed cases is 21% (15/65).

The measles outbreak in Mali is ongoing in Communiques IV (2 cases), V (3 cases) and VI (4 cases) of Bamako district. From Week 1 to week 48, a total of nine out of 16 samples tested positive. The last confirmed case was notified in week 47. Outbreak responses measures are being implemented in affected communes.
As of week 52 (week ending 29 December 2019), 1,215 suspected cases of measles have been reported from three regions in the country. Of these, 360 were confirmed IgM-positive.

As of 22 December 2019, a total of 41 cases have been reported including 33 suspected cases, 3 probable cases and 5 confirmed from two regions: Sikasso and Koulikoro. Five deaths have been reported including 2 among confirmed cases.

Niger was affected by heavy rains followed by floods since June to September 2019. A total of 211,366 people were affected, including 57 people who died and 16,375 houses collapsed during that period. A second wave of flooding has been reported since October 2019 in the Diffa and Tahoua regions. In Diffa region, following an exceptional flood from Komadougou Yobe river around 45,594 people were affected according to the Ministry of Humanitarian Action and Management of Catastrophe (AH / GC). The most affected municipalities are those of Diffa, Gueskerou and Chétimari. In Tahoua, heavy rainfall in the commune of Bombaye affected 249 households. There is an urgent need for basic health and social services such as shelters, food and non-food items, and WASH assistance.

The security situation continues to worsen in bordering areas of Burkina Fasso, Mali and Nigeria following Boko Haram and Jihadistes attacks in the region. The number of displaced people is increasing in Tilaberi, Maradi, Diffa. Since September 2019, more than 40,000 Nigerian refugees have crossed the border seeking safety in west Niger and the Burkina Faso border area has seen increasing attacks by jihadist armed groups against the local population and authorities, leading to states of emergency declared in several departments. This security situation is hampering the humanitarian access and affecting the access to basic health and social services. A total of 46 health posts and 4 health centers have closed due to insecurity.

During week 48 (week ending 1 December 2019), eight new confirmed cases with two deaths were reported from Ondo (6 cases with two deaths), and Edo (2 cases with zero deaths) states. Eighty-six Local Government Areas (LGAs) across 23 states have reported at least one confirmed case since the beginning of 2019. Nineteen (19) health care workers across 10 states have been infected since the beginning of 2019. A total of 347 contacts are currently being followed.

During week 49 (week ending 1 December 2019), eight new confirmed cases with two deaths were reported from Ondo (6 cases with two deaths), and Edo (2 cases with zero deaths) states. Eighty-six Local Government Areas (LGAs) across 23 states have reported at least one confirmed case since the beginning of 2019. Nineteen (19) health care workers across 10 states have been infected since the beginning of 2019. A total of 347 contacts are currently being followed.

Between epi weeks 44 - 48 (week ending 30 November 2019), a total of 2,064 suspected cases of measles were reported from 36 states including 7 deaths (CFR 0.3%). Katsina (342), Borno (248), Kaduna (237), Yobe (216), Sokoto (142), Kano (106) and Adamawa (83) account for 67% of all the cases reported in the time period. Between epi week 1 and 48, a total of 58,916 suspected cases have been recorded from 759 LGAs in 36 states and FCT with 289 deaths (CFR 0.5%). Of the 12,467 samples tested, 2,767 were IgM positive for measles.

Between epi weeks 44 - 48 (week ending 30 November 2019), a total of 2,064 suspected cases of measles were reported from 36 states including 7 deaths (CFR 0.3%). Katsina (342), Borno (248), Kaduna (237), Yobe (216), Sokoto (142), Kano (106) and Adamawa (83) account for 67% of all the cases reported in the time period. Between epi week 1 and 48, a total of 58,916 suspected cases have been recorded from 759 LGAs in 36 states and FCT with 289 deaths (CFR 0.5%). Of the 12,467 samples tested, 2,767 were IgM positive for measles.
One case of circulating vaccine-derived poliovirus type 2 (cVDPV2) was reported from Plateaux province this week. There are four cVDPV2 cases in 2019 in the country linked to states Katsina, Bauchi, Edo and Ebonyi accounting for 62% of all the confirmed cases in 2019.

From 1 January 2019 to 16 November 2019, a total of 3787 suspected yellow fever cases have been reported from 604 out of 774 LGAs across all the 36 states and the Federal capital territory. Of the samples taken, 166 have tested positive for yellow fever IgM in Nigerian network laboratories. Also, 129 samples from 18 states were confirmed positive using real time polymerase chain reaction (RT-PCR). There have been 192 deaths among suspected cases (CFR 5.1%) and 20 deaths among confirmed cases (CFR 15.5%). Four states Katsina, Bauchi, Edo and Ebonyi accounting for 62% of all the confirmed cases in 2019.

Sierra Leone: Lassa fever

No new confirmed cases have been reported since 24 November 2019 from Tonkolili district. From 30 October to 6 December, a total of five cases (three confirmed and two probable) with three deaths have been reported in Tonkolili district. Of the total 71 contacts identified, 38 have completed 21 days of monitoring while 33 are still being followed. In a separate cluster, two laboratory confirmed cases with one death were reported from Kenema district from 27 to 28 November 2019. A total of 119 contacts of these cases are being followed.

South Sudan: Flood

The aftermath of the floods has led to an increase in water-borne diseases such as acute watery diarrhoea and vector-borne diseases such as malaria. The water levels continue to recede in most of the flood affected areas, and most people are returning to their homes. Nevertheless, up to 21 000 flood-affected households in priority locations still require humanitarian assistance in early 2020.

The humanitarian situation has been largely calm but unpredictable in most of the states. The number of internally displaced people (IDPs) in South Sudan was estimated at 1.47 million. Malnutrition continues to be a problem in the country as more than 6.35 million people are reported to be severely food insecure in South Sudan. Communicable disease burden remains high with ten counties reporting malaria cases above their epidemic thresholds and measles cases being reported from 16 counties (Abyei, Mayom, Melut, Aweil South, Aweil East, Tonj North, Juba, Wau, Aweil West, Gogrial West, Gogrial East, Renk, Tonj South, Jur River, Pibor and Yambio) and four protections of civilian (PoC) sites (Juba, Bentiu, Malakal and Wau).

South Sudan: Humanitarian crisis

The current outbreak in Bentiu POC continues. In week 52 (week ending 29 December 2019), three new suspected cases of Hepatitis E were reported. As of reporting date, a total of 125 cases and two deaths have been recorded from Bentiu POC and a total of 12 suspected cases including 4 confirmed cases in Lankein. The last cases in Lankein were reported in week 25 (week ending on 23 June 2019).

Between week 1 to week 52 of 2019, a total of 4 414 suspected cases of measles which 215 laboratory-confirmed with 23 deaths (CFR 0.6%) have been reported. The outbreak has affected 24 counties (Pibor, Abyei, Mayom, Gogrial West, Aweil South, Melut, Gogrial East, Juba, Tonj North, Aweil West, Aweil East, Renk, Wau, Tonj North, Jur River, Yambio, Budi, Ikotos, Maban and Aweil East, Ikotos, Tonj East, Magwi and Bomaand) and 4 PoCs (Juba, Bentiu, Malakal and Wau).

One case of circulating vaccine-derived poliovirus type 2 (cVDPV2) was reported from Plateaux province this week. There are four cVDPV2 cases in 2019 in the country linked to Uganda outbreak in Nigeria.

Uganda: Rift valley fever

Between 1 and 31 October 2019, a total of 6 623 new refugee arrivals crossed into Uganda from the Democratic Republic of the Congo (4 016), South Sudan (2 167) and Burundi (440). Uganda hosted 1 362 269 asylum seekers as of 31 October 2019, with 95% living in settlements in 11 of Uganda’s 128 districts and in Kampala. The majority of refugees are from South Sudan (62.9%), the Democratic Republic of the Congo (28.8%) and Burundi (3.5). Most are women within the age group 18 - 59 years.

On 5 December a second confirmed case of Rift Valley fever was reported from Ntoroko district, Uganda. This was a 25-year-old male from the Democratic Republic of Congo who was living and working in Kimara Village, Butungi sub-county in Ntoroko district, Uganda. Following the presentation of haemorrhagic symptoms on 5 December 2019, a viral haemorrhagic diseases was suspected and the case was isolated in an ETC for treatment. A sample was collected and sent to UVRI on the same day and the case-patient died on 6 December 2019. A safe and dignified burial was conducted on 17 December 2019. As of 19 December 2019, a total of 2 cases and 2 deaths have been reported from Ntoroko and Obongi Districts.

One new case of circulating vaccine-derived poliovirus type 2 (cVDPV2) has been reported this week. The onset of paralysis for the new case was on 13 November 2019 from Kalabo District, Western Province. There is a total of two cVDPV2 cases in 2019.

Closed Events

Cameroon: Monkeypox

A case of confirmed case of monkeypox was notified on 24 September 2019 in Ekondo–Titi health district in the South West region of Cameroon on the 18 of September 2019. It is a 14-year- old, male resident of Illor (Ekondo titi health district), who presented with measles-like symptoms. The laboratory result released on 23 September 2019 waspositive for monkeypox (serotype similar to the West African strain). All supportive measures for case management were put in place and community-based surveillance was stepped up in this area. Since the notification of that case in September 2019, they have been no other information received from the country office ocases of monkeypox in the same area.

Grading is an internal WHO process, based on the Emergency Response Framework. For further information, please see the Emergency Response Framework: http://www.who.int/peh-emergency/events/
