WEEKLY BULLETIN ON OUTBREAKS AND OTHER EMERGENCIES

Week 6: 3-9 February 2020
Data as reported by: 17:00; 9 February 2020

1 New event
69 Ongoing events
56 Outbreaks
14 Humanitarian crises

Legend
- Measles
- Monkeypox
- Lassa fever
- Cholera
- Rift Valley Fever
cVDPV2
- Anthrax
- Malaria
- Floods
- Meningitis
- Countries reported in the document
- Non WHO African Region
- WHO Member States with no reported events

Health Emergency Information and Risk Assessment
This Weekly Bulletin focuses on public health emergencies occurring in the WHO African Region. The WHO Health Emergencies Programme is currently monitoring 70 events in the region. This week’s main articles cover key new and ongoing events, including:

- Crimean-Congo haemorrhagic fever in Mali
- Lassa fever in Nigeria
- Ebola virus disease in Democratic Republic of the Congo
- Humanitarian crisis in Burkina Faso

For each of these events, a brief description, followed by public health measures implemented and an interpretation of the situation is provided.

A table is provided at the end of the bulletin with information on all new and ongoing public health events currently being monitored in the region, as well as recent events that have largely been controlled and thus closed.

**Major issues and challenges include:**

- The outbreak of Lassa fever in Nigeria continues to expand, with growing incidence cases as well as new affected states. In recent years, the country has been experiencing increasingly larger Lassa fever outbreaks. This trend is of great concern and calls for increased efforts to scale up preparedness and response actions, especially at sub-national and local levels. Importantly, the national authorities in Nigeria and the other countries where Lassa fever is endemic need to increase investments in longer-term preventive measures, including effective vector control and environmental management, social mobilization and community engagement strategies. These interventions need to be strongly routed on a good understanding of the local anthropological and epidemiological knowledge of the disease.

- The humanitarian crisis in Burkina Faso continues to deteriorate, with worsening insecurity. Attacks on civilians, aid workers and military installations have sharply risen since January 2020. Accordingly, the number of displaced persons has reached unprecedented levels within a short period, grossly overwhelming the humanitarian response capacity on the ground. There is a need to scale up humanitarian response capacity on the ground as well as the required inputs. Notably, efforts to restore peace and security should be enhanced by the global communities.
EVENT DESCRIPTION

On 4 February 2020, the Ministry of Health and Social Affairs in Mali informed WHO of an outbreak of Crimean-Congo haemorrhagic fever (CCHF) in Mopti District, located in the south-eastern part of the country, at the border with Burkina Faso. The event was initially reported to the Mopti health authority on 1 February 2020 when a cluster of community deaths occurred and case-patients manifesting haemorrhagic symptoms presented to local health facilities in Korintzá health area. The index case in this event was a 39-year-old male shepherd from Kèra village who fell ill on 5 January 2020 with symptoms of epistaxis, haematemesis and general fatigue. The case-patient received unspecified treatment in the community and later died on 11 January 2020. On 15 January 2020, an aunt of the index case (who cared for him) developed a similar illness and died on 23 January 2020 in the community. Between 27 and 30 January 2020, three other family members fell ill with a similar illness and died in the community. During the same period, nine case-patients from the same community presented to the local health facilities with haemorrhagic symptoms. Blood specimens collected from the nine case-patients in admission were analysed at the National Public Health Institute. Of the nine specimens, three tested positive for CCHF virus infection, thus confirming the outbreak.

Between 5 January and 2 February 2020, a total of 14 suspected CCHF cases, including seven deaths (case fatality ratio 50%) have been reported. Of the seven deaths, five occurred in the community and two occurred in a health facility. A total of 13 out the 14 suspected cases are females. Five case-patients remain admitted in healthcare facilities and are receiving treatment. Further investigation into this event is ongoing and updates will be provided as new information becomes available.

PUBLIC HEALTH ACTIONS

- The district rapid response team conducted initial outbreak investigation in the affected community and commenced implementing response activities. Preparations are ongoing to deploy the national rapid response team to carry out detailed epidemiological investigation and support local response.
- Disease surveillance is being strengthened in the affected region to facilitate early detection of suspected cases in the community and health facilities.
- Healthcare workers are being oriented to improve their capacity to respond to the outbreak effectively.
- Risk communication and community mobilization activities are ongoing using various approaches and channels.

SITUATION INTERPRETATION

The Ministry of Health in Mali has confirmed an outbreak of CCHF in Mopti district, an event coming after over a decade of no reported outbreaks of the disease in the country. However, recent sero-prevalence studies in both human and other animals demonstrated that the virus is circulating in the country. The affected region is plagued with intense insecurity resulting in a complex humanitarian crisis. Provision of and access to healthcare services is severely compromised, with the region being categorised as hard-to-reach due to the deteriorating insecurity. As a result, several of the initial cases died in the community at the beginning of the outbreak. Because of these factors, the current outbreak has the potential to escalate further. The national authorities and partners need to conduct detained epidemiologic investigation to establish the extent of this event and institute proportionate public health actions to bring it to a close.
Health Emergency Information and Risk Assessment

**EVENT DESCRIPTION**

The outbreak of Lassa fever in Nigeria continues to propagate, with new states being affected weekly. Since our last report on 26 January 2020 (Weekly Bulletin 4), 202 additional confirmed Lassa fever cases have been reported and six new states have also been affected, four of which (Kano, FCT, Kebbi and Anambra) have never reported Lassa fever cases in the past. In week 5 (week ending 2 February 2020), 104 new confirmed Lassa fever cases have been reported from 15 states, compared to 95 cases reported in week 4, showing a continuous upward trend of cases reported weekly.

Between 1 January and 2 February 2020, a cumulative total of 1,226 suspected cases were reported in Nigeria. Among these, a total of 365 confirmed cases were recorded from 74 local government areas (LGAs) in 23 states, with the majority of confirmed cases coming from Edo (35%), Ondo (35%) and Ebonyi (6%) states. Among the 365 confirmed cases, 47 deaths have occurred, giving an overall case fatality ratio of 12.9%, which is considerably lower compared to that for the same period in 2019 (17.7%). The cumulative number of contacts follow up since week 1 2020 is 1,710, 412 of whom have completed the mandatory 21-day follow up period. A total of 361 cases are undergoing treatment in the various treatment centres across the country.

The outbreak has mainly affected individuals between the ages of 21 and 30 years, and the proportion of females affected is slightly higher than males (1.2:1). Since the beginning of the year, as of week 5 of 2020, 10 healthcare workers have been infected.

Other countries in the West African sub-region (Liberia and Sierra Leone) are currently experiencing Lassa fever outbreaks, although not linked to the ongoing outbreak in Nigeria. The neighbouring countries of Benin, Niger and Cameroon have not reported any cases of Lassa fever.

**PUBLIC HEALTH ACTIONS**

- The National Lassa Fever Technical Working Group (NLFTWG), activated on 24 January 2020, continues to coordinate the response at national level. At sub-national level, coordination continues at the Emergency Operation Centres (EOCs) established in the three most affected states of Ondo, Edo and Ebonyi.

- Rapid response teams led by the Nigeria Centre for Disease Control (NCDC) have been deployed to support outbreak response activities in Ondo, Ebonyi, Enugu, Kano and Borno states.

- Case-patients are being treated in the different treatment centres in the affected states with ribavirin and other supportive therapeutics. Guidelines for appropriate case management, safe and dignified burial and infection prevention and control (IPC) have been disseminated to the different states.

- Surveillance activities have been enhanced in the affected states with improved contact tracing and active case finding in affected LGAs. An updated tool for detailed case investigation has also been provided to investigation teams to ensure all relevant information is captured.

- Commodities to support outbreak response activities have been distributed to states and treatment centres, including personal protective equipment (PPEs), ribavirin (injection and tablets), beds, tents, body bags, thermometers, hypochlorite hand sanitizers, information, education and communication (IEC) materials, guidelines and standard operating procedures (SOPs).

- Targeted risk communication activities are ongoing in most affected states mainly through radio and social media messaging.

**SITUATION INTERPRETATION**

Lassa fever is known to be endemic in Nigeria and many West African countries where sporadic cases are reported all year round, with seasonal peaks typically between December and April. However, in recent years, the number of cases reported in Nigeria has continued to increase in an unprecedented manner, greater than reported in previous outbreaks. Response activities, under the leadership of the NCDC, continue in the most affected states albeit with challenges in all pillars of the response. The report of healthcare worker infection highlights the urgent need to strengthen IPC measures. Furthermore, country capacity to detect and respond to Lassa fever outbreaks, particularly at subnational level needs to be improved (surveillance, contact tracing, laboratory, case management, coordination and IPC).
**EVENT DESCRIPTION**

The Ebola virus disease (EVD) outbreak in North Kivu, South Kivu and Ituri provinces in Democratic Republic of the Congo continues. Since our last report on 2 February 2020 (Weekly Bulletin 5), there have been 10 new confirmed cases and seven new deaths. In the past 21 days (19 January to 8 February 2020), 15 new confirmed cases have been reported from two health zones and four health areas. The principle hot spot of the outbreak in the past 21 days is Beni (93%; n=14). A total of 23 health zones have not reported cases for more than 42 days. However, surveillance is still ongoing in these health zones. The last new confirmed case in Kalunguta Health Zone was reported on 28 December 2020.

As of 8 February 2019, a total of 3 431 EVD cases, including 3 308 confirmed and 123 probable cases have been reported. To date, confirmed cases have been reported from 29 health zones: Ariwara (1), Bunia (4), Komanda (56), Lolwa (6), Mambasa (82), Mandima (347), Nyakunde (2), Rwampara (8) and Tchomia (2) in Ituri Province; Alimbongo (5), Beni (719), Biéna (19), Butembo (295), Goma (1), Kalunguta (198), Katwa (653), Kayna (28), Kyondo (25), Lubero (31), Mabalako (463), Manguredjipa (18), Masereka (50), Musienene (85), Mutwanga (32), Nyiragongo (3), Oicha (65), Pinga (1) and Vuhovi (103) in North Kivu Province and Mwenga (6) in South Kivu Province.

As of 8 February 2020, a total of 2 251 deaths were recorded, including 2 128 among confirmed cases, resulting in a case fatality ratio among confirmed cases of 64% (2 128/3 308). As of 8 February 2020, the total number of health workers affected remains at 172, representing 5% of confirmed and probable cases.

Contact tracing is ongoing in two health zones. A total of 2 486 contacts are under follow-up as of 8 February 2020, of which 2 232 (89.8%) have been seen in the past 24 hours. Thirty-nine out of 50 health zones raised alerts on 8 February 2020. Of 5 274 alerts processed (of which 5 217 were new) in reporting health zones on 8 February 2020, 5 209 were investigated and 476 (9.4%) were validated as suspected cases.

**PUBLIC HEALTH ACTIONS**

- Response and surveillance activities continue in all affected areas. However, there have been five days of inactivity at the PoC of Biakato-Mayi and Biakato-Mines due to insecurity.
- A health centre was attacked in Butembo, destroying equipment and infrastructure and in Mangina the massive displacement of people fearing armed attacks continues; however, the military force has been strengthened in the area.
- As of 8 February 2020, a cumulative total of 291 423 people have been vaccinated since the start of the outbreak in August 2018.
- Point of Entry/Point of Control (PoE/PoC) screening continues, with over 150 million screenings to date. A total of 106/109 (97.2%) PoE/PoC transmitted reports as of 8 February 2020.

**SITUATION INTERPRETATION**

Beni appears to now be the main health zone affected by this continuing outbreak. However, ongoing insecurity in other areas is still of concern as response activities are interrupted and more cases may be expected once these activities resume. Reports from PoCs suggest that Butembo and Mabalako are preferred destinations for potential contacts. Continued access and heightened vigilance is required to maintain case investigation and contact tracing activities in all health zones.

**Geographical distribution of confirmed Ebola virus disease cases reported from 19 January 2020 to 8 February, North Kivu, South Kivu and Ituri provinces, Democratic Republic of the Congo**
The security situation in Burkina Faso has deteriorated sharply in the past few weeks, with attacks of unprecedented violence mainly against civilians. Between early December 2019 and late January 2020, the number of internally displaced persons (IDPs) increased by 500%, from 87,000 to 560,033 registered as of 9 December 2019, as a result of continuous population movements, according to the Office for the Coordination of Humanitarian Affairs (OCHA).

During the final two weeks of January 2020 alone, there were 94 deaths and five injuries. The regions most affected by the crisis are Centre-North, Sahel, North, East and Boucle du Mouhoun. This has led to a continuous flow of IDPs traumatized by these actions, moving to safer areas. As of 27 January 2020, figures from OCHA report that 613,792 IDPs have been registered in the 13 regions of the country. A large proportion of IDPs are children (57.79%) and women (25.88%), Centre-North (51.8%) and Sahel (34.6%) host the majority of the IDPs.

The health system has suffered badly in the insecurity, particularly in the most affected regions, with three health workers killed and another injured during armed attacks in January 2020. The Ministry of Health has reported that 96 health facilities, making up 8.4% of health facilities in six regions affected by insecurity are closed, depriving more than 1.2 million people of healthcare. Another 140 (12%) health facilities have reduced their services to a minimum as a result of the insecurity.

Burkina Faso also faces public health threats from epidemic-prone diseases, particularly measles, and meningitis, for which the usual outbreak season is from January to April. The risk of cholera remains high in the context of population displacement, inadequate shelter and poor hygiene. The highest recorded mortality is from malaria. For week 2 of 2020 (week ending 11 January 2020), the following diseases were reported in all the five most affected regions: meningitis 10 cases, with zero deaths, measles 17 cases with zero deaths, dengue fever 51 suspected cases and 20 probable cases, with zero deaths. For the first two epidemiological weeks of 2020, the five regions reported a total of 15 suspected cases of meningitis with zero deaths and 22 suspected cases of measles with zero deaths.

Malnutrition thresholds are alarming in the regions hosting IDPs, namely Barsalogho, Djibo, Matiacoali, Arbinda and Titao. The SMART survey carried out at the end of 2019 reports a prevalence of global acute malnutrition (GAM) among children aged 6 to 59 months of more than 10%, exceeding the alert threshold. Among pregnant and/or breastfeeding women, the prevalence of GAM exceeds the alert or critical threshold in Kaya (13.9%), Matiacoali (14%) and Barsalogho (15.3%).

**PUBLIC HEALTH ACTIONS**

- On 9 January 2020, the Ministry of Public Health officially activated the Emergency Operations Centres for the coordination of the health response to the humanitarian crisis in six regions facing insecurity in Burkina Faso.
- WHO has provided financial and technical support in the implementation of the Health Resource Availability Mapping System (HeRAMS) survey, carried out in the 13 regions of the country from 27 January to 4 February 2020; financial and technical support for the second level training of providers (26 people, including 14 women) in five regions most affected by insecurity on the medical management of gender-based violence survivors.

**EVENT DESCRIPTION**

**PUBLIC HEALTH ACTIONS**

- WHO has provided financial and technical support to fill critical gaps through multi-disciplinary mobile clinics in Djibo, Sahel Region, in collaboration with Médicin du Monde (MDM) Spain.
- WHO continues to support their two consultants in the field with coordination at regional level (Dori and Kaya), support to joint missions in the field, monitoring care of IDPs, support with incident reporting and support for monitoring and identifying priority needs for health response.
- WHO continues to coordinate the humanitarian response of health partners and the finalizing of the humanitarian response plan for 2020, along with needs assessment missions in the field.
- Partner response includes distribution of 2,000 Menstrual Hygiene Management kits to 20 schools in Kaya and Pissila, Centre-North Region; malnutrition response support from LVIA in the form of rehabilitation of treatment units; MDM Spain trained 14 health workers from Sebbia District Hospital in essential new-born care; HELP continued human resource support and provision of medicines in Sebbia Health District and International Red Cross supported training of 80 community-based health workers in Djibo Health District.

**SITUATION INTERPRETATION**

The security and humanitarian context in Burkina Faso remains of great concern, with the increasing number of attacks in the five most affected areas. This has resulted in increasingly restricted humanitarian space, with certain areas effectively landlocked, in particular the town of Arbinda in the Sahel Region, along with Kaya, Centre-North and the areas of Pensia, Dablo, Foubé and Barsalogho becoming difficult to access. This is leading to continuous population movement, worsening the humanitarian situation. The activation of EOC should allow for better coordination of partners alongside national government for a better response to the situation.
Summary of major issues, challenges and proposed actions

Major issues and challenges

- The outbreak of Lassa fever in Nigeria is rapidly expanding, with the number of new reported cases increasing weekly and new states being affected. The country has been experiencing larger and larger outbreaks of Lassa fever in the recent past. This trend is worrying and calls for concerted efforts to mitigate the current situation but also ameliorate future outbreaks. Importantly, the national authorities in Nigeria and the other countries where Lassa fever is endemic need to increase investments in longer-term preventive measures, including effective vector control and environmental management, social mobilization and community engagement strategies.

- The humanitarian crisis in Burkina Faso is worsening due to the deteriorating security situation. Armed attacks, especially on civilian targets have risen sharply since January 2020. The number of displaced persons has increased by over 500% in the last one month, grossly overwhelming the humanitarian response capacity on the ground. There is a need to rapid scale up humanitarian response capacity, especially critical life-saving interventions on the ground as well as the required resources and human capacity. Notably, efforts to restore peace and security should be enhanced by the global communities.

Proposed actions

- The national authorities and partners in Nigeria need to urgently scale up implementation of preparedness and response intervention, with a focus to sub-national and local capacity. The national authorities and partners also need to increase investments in longer-term innovative preventive measures, including effective vector control and environmental management, social mobilization and community engagement strategies.

- The national authorities and partners in Burkina Faso need to ramp up provision of critical life-saving interventions and the overall humanitarian response. The number of humanitarian partners on the ground also need to increase and well as the aid support. The donor communities and development partners are also urged to continue providing the required inputs (especially funding) in the face of worsening situation.

<td>On 6 January 2019, the Ministry of Health of Benin notified WHO of an outbreak of meningitis in Banikoara Commune, Alibori Department, Northern Benin. The current outbreak reportedly began in week 50 (week ending 15 December 2019) when a cluster of four case-patients with signs and symptoms suggestive of meningitis were reported from Banikoara Commune. Of these, three were subsequently confirmed as having bacterial meningitis infection. In the following week, an additional 13 cases were reported from the same area, thus exceeding the epidemic threshold for the disease. From 9 December 2019 to 22 January 2020, a cumulative total of 83 cases with 13 deaths (case fatality ratio 16%) have been reported Banikoara Commune. Of these, 16 cases with six deaths have been confirmed for bacterial meningitis infection.</td>

<td>Cameroon continues to face a humanitarian crisis in the Far North Region linked to the terrorist attacks by Boko Haram group, with significant population displacement. Since 1 January 2020, there have been 16 attacks by alleged Boko Haram insurgents, resulting in 20 missing people, 67 injuries and 27 deaths. This situation is hindering humanitarian access and limiting operations and has resulted in suspension of activities beyond Fotokol and Makary in Logone and Chari division. The Minawao Refugee Camp in the Mokolo Health District continues to host Nigerian refugees, with spontaneous refugee arrivals being recorded weekly. As of December 2019, the total camp population was 59 977 persons.</td>

</table>
| The humanitarian situation in the Northwest and Southwest (NW & SW) of Cameroon continues to deteriorate with rising tensions between separatists and military forces. Between 9 and 15 December 2019, an estimated 5 475 people (782 households) were forced to flee their villages following a series of military operations and community clashes throughout the North West region. Military operations in the Momo, Mezam, Boyo, Ngtetunjia, Donga Mantung and Bai Divisions have led to the displacement of 2,775 people, while community clashes in the Boyo division has led 2,700 people to flee their homes. This unrest continues to affect access to basic services including healthcare, education, shelter, food security and WASH.
The cholera outbreak continues to improve in the 3 affected regions of Cameroon (North, Far North, South West) reporting cases in 2019. An additional region (Littoral) notified cases of cholera since the beginning of the year 2020. Since 1 January 2020 to date, cholera cases are reported in South Ouest and littoral regions only. A total of 21 new cholera cases, with one community death were reported in the littoral region in epidemiological week 4 (week ending 26 January 2020).

Though the epidemiological situation in the South west region is relatively calm, it is important to note that the insecurity prevailing in that area is hindering community active search of cholera cases. No new cases of cholera were reported in North and Far North regions since epidemiological weeks 51 and 48 respectively. From January 2019 to date, a total of 1 334 cases of cholera, with 61 deaths were reported from the four affected regions.

No case of circulating vaccine-derived poliovirus type 2 (cVDPV2) was reported this week. Since 1 January 2020 to date, a total of 705 suspected cases and 82 deaths have been reported from Beboto, Korbol and Kelo.

From Week 1, 2019 (week ending on 7 January 2019) till week 5, 2020 (week ending on 2 February 2020), a total of 5 392 measles cases including 130 confirmed cases and 82 deaths have been reported in 12 affected districts in Central African Republic. An additional region (Littoral) notified cases of cholera since the beginning of 2020. Since 1 January 2020 to date, cholera cases are reported in South Ouest and littoral regions only. A total of 83 309 people was affected by the flood, including 15 331 in Bangui and 67 978 people outside Bangui. Currently, the situation is improving, and the internally displaced persons are returning to their places of origin. As of 24 December 2019, there were 77 275 people displaced by the floods, with 5 299 displaced in Bangui.

No case of cVDPV2 was reported in the past week. On 23 May 2019, WHO received notification through the Global Polio Laboratory Network (GPLN) of the detection of circulating vaccine-derived poliovirus type 2 (cVDPV2) from an environmental sample collected on 20 April 2019 in the Northern Province of Cameroon which borders Borno State in Nigeria and Chad. There are no associated cases of paralysis detected so far.

WHO was notified of an outbreak of monkeypox on 14 January 2020 by the Ministry of Public Health in Cameroon following the confirmation of the monkeypox case by the Institut Pasteur laboratory on 08 January 2020. The index case is a 13-month-old child from Tombat village, health area of Aya Urbain, Aya Health district, centre region, who consulted at Arche de Noé health centre on 20 December 2019 with signs compatible with smallpox. The child was referred to the Regional Hospital annex of Ayos, then at Chantal Biya hospital on 24 and 26 December 2019 respectively. The person died on 2 January 2019. The second confirmed case is the mother of the dead child.

A measles outbreak is ongoing in Cameroon. Since the beginning of 2019, a total of 1 170 suspected cases have been reported. Of these, 382 were confirmed as IgM-positive. The outbreak is currently affecting 43 districts, namely, Kousseri, Mada, Goulfey, Makary, Kolofata, Koza, Ngoundéré rural, Bangou, Guider, Figuil, Ngaoundéré, N'Gou, Mora, Maroua 3, Vélib, Pitao, Maroua 1, Bourha, Touboro, Mogodé, Bébemi, Garoua 1, Garoua 2, Lagdo, Tcholliré, Guidiguis, Moutourwa, Mokolo, Cité verte, Djoungolo, Nkolndongo, Limbé, Garoua Boulai, Ngang 2 0 0.00%

From Week 1, 2019 (week ending on 7 January 2019) till week 5, 2020 (week ending on 2 February 2020), a total of 5 392 measles cases including 130 confirmed cases and 82 deaths have been reported in 12 affected districts in Central African Republic. A total of 922 new suspected measles cases were notified from 130 confirmed cases and 82 deaths have been reported in 12 affected districts in Central African Republic. An additional region (Littoral) notified cases of cholera since the beginning of 2020. Since 1 January 2020 to date, cholera cases are reported in South Ouest and littoral regions only. A total of 21 new cholera cases, with one community death were reported in the littoral region in epidemiological week 4 (week ending 26 January 2020).

Since 3 October 2019, heavy rains resulted in floods in 8 out of 12 departments of the Republic of Congo, namely: Likouala, Cuette, Plateaux, Sangha, Kouilou, Niazi, Brazzaville and Pointe-Noire. As a result of the floods, homes and public infrastructure have been destroyed leaving the affected population in precarious living conditions and with limited access to health care. Furthermore, the floods have caused significant damage to the agricultural and farming sectors thus posing a threat to food security. On 19 November 2019, the Congolese government declared a state of emergency in the affected areas. As of 10 December 2019, at least 170 000 people have been affected.

No case of circulating vaccine-derived poliovirus type 2 (cVDPV2) was reported this week. So far, the only cVDPV2 isolated was from an environmental sample collected on 24 September 2019 in Abidjan. The isolated cVDPV2 is linked to a virus detected in Niger in 2018 that belongs to the Jigawa emergence group, which has previously also been detected in Cameroon, Chad, Niger, Benin, Ghana, and Togo.

### Democratic Republic of the Congo

- **Humanitarian crisis**
  - Grade 3
  - Date notified to WCO: 20-Dec-16
  - Start of reporting period: 17-Apr-17
  - End of reporting period: 12-Jan-20
  - Total cases: -
  - Confirmed cases: -
  - Deaths: -

The Democratic Republic of the Congo continues to experience a complex humanitarian crisis involving armed conflicts and inter-community tension resulting in large number of people in need of humanitarian assistance. Populations movement due to armed clashes and inter-community fighting continue to be reported in North-Kivu, Tanganyika, Ituri, Kasai central and South-Kivu provinces. In Ituri, since December 2019, many localities are facing insecurity due to the recent fighting between Government forces and armed groups in Lipiri, Basolo, and Ngobo Localities. This fighting resulted in a total of 3 370 internally displaced people that arrived in Mwanga. In South Kivu, clashes between armed groups in different territories including Fizi, Haut plateaux d’Uvira, Kalehe continue to result in mass population displacement. In Kasai central, an inter-community conflict between Bakwa Kayinga and Bakwa Ndaye was reported on 19 January 2020.

### Measles

- **Grade 2**
- **Date notified to WCO: 1 Jan-20**
- **Start of reporting period: 19-Jan-20**
- **End of reporting period: 22-Jan-20**
- **Total cases: 2 122**
- **Confirmed cases: -**
- **Deaths: 36**
- **CFR: 1.70%**

During week 3 (week ending 19 January 2020), a total of 662 suspected cases of cholera and 8 deaths (CFR 1.2%) were notified from 8 out of the 26 provinces in the country. The majority (94%) reported in week 3 came from five provinces: North-Kivu, South-Kivu, Tanganyika, Tshopo and Haut-Katanga. The weekly case incidence has been on a decreasing trend since week 1 of 2020; a similar trend was observed in previous years. The case fatality rate decreased during week 3 (CFR 1.7%) compared to week 2 (CFR 2.7%) of 2020. The province of Katanga continues to report high mortality rates which are above 5%. Between week 1 and week 52 of 2019, a total of 30 304 cases including 514 deaths (CFR 1.7%) were notified from 23 out of 26 provinces.

### Ebola virus disease

- **Grade 3**
- **Date notified to WCO: 31-Jul-18**
- **Start of reporting period: 11-May-18**
- **End of reporting period: 8-Feb-19**
- **Total cases: 3 431**
- **Confirmed cases: 3 308**

#### Monkeypox

- **Grade Ungraded**
- **Date notified to WCO: n/a**
- **Start of reporting period: 1-Jan-20**
- **End of reporting period: 19-Jan-20**
- **Total cases: 145**
- **Confirmed cases: -**
- **Deaths: 1**
- **CFR: 0.70%**

During week 3 (week ending 19 January 2020), a total of 46 suspected cases including one death were reported across the country, compared to 37 suspected cases and no deaths in the previous week. The majority of cases in week 3, were reported from Sankuru province (57%). In the past four weeks (week 52 of 2019 to week 3 of 2020) a total of 204 suspected cases with two deaths (CFR 1%) were notified in the country, with the majority of cases being reported from the provinces of Sankuru (32%), Bas-Uele (21%), Equateur (14%) and Tshuapa (9%). There has been an overall decrease in the weekly case incidence since week 43 of 2019. Between weeks 1 and 52 of 2019 a cumulative total of 5 288 monkeypox cases, including 107 deaths (CFR 2%) were reported from 133 health zones in 19 provinces.

### Cholera

- **Grade 3**
- **Date notified to WCO: 16-Jan-15**
- **Start of reporting period: 1-Jan-20**
- **End of reporting period: 19-Jan-20**
- **Total cases: 2 122**
- **Confirmed cases: -**
- **Deaths: 36**
- **CFR: 1.70%**

During week 4 (week ending 26 January 2020), 3 484 measles cases including 64 deaths (CFR 1.8%) were reported across the country. There was a slight decrease in the number of new cases reported in week 4 compared to week 3 of 2020. The provinces of Maidombie, Equateur, Bas-uele, Kongo central and Mongala accounted for 60.6% of cases reported in 2020 (weeks 1-4), with over 1000 cases reported in these provinces. Since the beginning of 2019, 331 316 measles cases including 6 302 deaths (CFR 1.9%) have been recorded in 26 provinces. In total, 258 (49.7%) of the 519 health zones have reported a confirmed measles outbreak. To date, a total of 2 837 cases were laboratory confirmed (IgM+), 71% of which were children under five years old.

### Polio

- **Grade Ungraded**
- **Date notified to WCO: n/a**

- **Total cases: 145**
- **Confirmed cases: -**
- **Deaths: 1**
- **CFR: 0.70%**

No new cases of cVDPV2 were reported this week. There are 64 cVDPV2 cases in 2019 reported from Sakuru (21), Haut Lomami (18), Kasai (8), Kwilu (8), Kwango (3), Haut Katanga (2), Tshuapa (1), and Kongo Central (1) provinces. There were 20 cases of cVDPV2 reported in 2018.

- **Ethiopia**
  - **Chikungunya**
  - **Date notified to WCO: 25-Jul-19**
  - **Start of reporting period: 27-May-19**
  - **End of reporting period: 8-Dec-19**
  - **Total cases: 54 908**
  - **Confirmed cases: 29 000**
  - **Deaths: 0**
  - **CFR: 0.00%**

Chikungunya cases have reported from Ethiopia since week 31 (week ending 30 July 2019). As of 8 December 2019, 54 908 suspected cases were reported from Dire Dawa City Administrative City (51 857), Arfar (2 782) and Somali (169) regions.
In week 4 (week ending 26 January 2020), 168 new suspected cases were reported in Somalia, SNNPR and Oromia regions. As of 18 January 2019, a total of 1 714 suspected cases including 6 deaths have been reported from three regions in 2020.

Between week 37 and week 49 in 2019, a total of 1 251 suspected cases and 6 confirmed cases of dengue fever were reported from Afar region. The peak of the outbreak was observed in week 38 when more than 300 suspected cases were reported.

In week 4 (week ending 26 January 2020), the measles outbreak is still ongoing in Oromia, SNNPR and Somali regions. A total of 839 suspected cases with 6 associated deaths were reported in week 4. 72% of cases were reported from Oromia region.

No new cases of circulating vaccine-derived poliovirus type 2 (cVDPV2) were reported this week. There are 11 cVDPV2 cases in 2019 linked to the Jigawa outbreak in Nigeria.

During week 44 (week ending 3 November 2019), 127 suspected cases of measles were reported. From week 1 to 44 (1 January – 3 November 2019), a total of 4 690 suspected cases including 18 deaths (CFR 0.4%) have been reported. Of the 4 690 suspected cases, 1 773 were sampled, of which 1 091 tested positive for measles by serology. Three localities in three health districts are in the epidemic phase, namely, Wanninda in Ratoma health district, Dounet in Mamou health district and Soumpoura in Tougue health district.

A new outbreak of leishmaniasis has been reported from Mandera, Marsabit, Wajir and Garissa counties.

The protracted Lassa fever outbreak in Liberia continues to evolve. Between 1 to 28 January 2020, a total of 24 confirmed cases including 9 deaths (CFR 37.5%) have been recorded. A total of 928 contacts have been listed of which 492 are still under follow up.

An outbreak of cholera is ongoing in Malawi, Blantyre district. Since the notification of the first case on 9 January 2020 till 24 January 2020, a total of 3 confirmed cases with zero deaths was reported from Limbe health facility. Blantyre is the largest commercial city in Malawi, it is in the southern part of the country. Response activities are going in the affected district and active surveillance was enhanced in all districts of the country.

Cases of malnutrition continue to be reported in Communes IV (2 cases), V (3 cases) and VI (4 cases) of Bamako district. From Week 1 to week 48, a total of nine out of 16 samples tested positive. The last confirmed case was notified in week 47. Outbreak responses measures are being implemented in affected communes.
Borno State. The cholera outbreak in Adamawa State is ongoing, though the number of cases being reported is showing a downward trend. Assistance as access challenges are impacting movement of mobile medical teams, ambulances, immunization staff and medical cargo in many locations across overcrowding in many camps in the region. Due to shrinking humanitarian space health partners are facing challenges in delivery of timely and urgent life-saving assistance as access challenges are impacting movement of mobile medical teams, ambulances, immunization staff and medical cargo in many locations across Borno State. The cholera outbreak in Adamawa State is ongoing, though the number of cases being reported is showing a downward trend. The humanitarian crisis in the North-eastern part of Nigeria persists with continued population displacement from security compromised areas characterized by over-crowding in many camps in the region. Due to shrinking humanitarian space health partners are facing challenges in delivery of timely and urgent life-saving assistance as access challenges are impacting movement of mobile medical teams, ambulances, immunization staff and medical cargo in many locations across Borno State. The cholera outbreak in Adamawa State is ongoing, though the number of cases being reported is showing a downward trend.

During week 5 (week ending 2 February 2020), 19 suspected cases of measles were reported from four regions in the country. Of these, 3 were confirmed IgM-positive. Since 1 January 2020, 54 suspected cases, 9 of which were confirmed have been reported. No associated deaths have been reported so far.

As of 22 December 2019, a total of 41 cases have been reported including 33 suspected cases, 3 probable cases and 5 confirmed from two regions: Sikasso and Koulikoro. Five deaths have been reported including 2 among confirmed cases.

In weeks 51 and 52 (week ending 29 December 2019), 82 cases were reported from six regions of Namibia with the majority (49 cases) from Khomas region. There was an increase in the number of cases reported in weeks 51 and 52 compared to weeks 49 and 50. As of 29 December 2019, a cumulative total of 1 731 laboratory-confirmed, 4 345 epidemiologically-linked, and 987 suspected have been reported countrywide. A cumulative number of 59 deaths have been reported nationally (CFR 0.8%), of which 24 (41%) occurred in pregnant or post-partum women. Cases have been reported from 12 out of 14 regions of Namibia, namely, Khomas, Omusati, Erongo, Oshana, Oshikoto, Kavango, Omaheke, Hardap, Karas, Otjozondjupa, and Kunene regions.

Niger was affected by heavy rains followed by floods since June to September 2019. A total of 211 366 people was affected, including 57 people who died, and 16 375 houses collapsed during that period. A second wave of flooding has been reported since October in the Diffa and Tahoua regions. In Diffa region, following an exceptional flood from Komadougou Yobé river around 45 594 people were affected according to the Ministry of Humanitarian Action and Management of Catastrophe (AH / GC). The most affected municipalities are those of Diffa, Guesskerou and Chétimari. In Tahoua, heavy rainfall in the commune of Bombaye affected 249 households. There is an urgent need of basic health and social services such as shelters, food and non-food items, and WASH assistance.

The security situation continues to worsen in bordering areas of Burkina Faso, Mali and Nigeria following Boko Haram and Jihadist attacks in the region. The number of displaced people is increasing in Tilliberry, Maradi, Diffa. Since September 2019, more than 40 000 Nigerian refugees have crossed the border seeking safety in west Niger and the Burkina Faso border area has seen increasing attacks by jihadist armed groups against the local population and authorities, leading to states of emergency declared in several departments. This security situation is hampering the humanitarian access and affecting the access to basic health and social services. A total of 46 health posts and 4 health centres have closed due to insecurity.

During week 3 of 2020 (week ending 19 January 2020) an additional 21 suspected cases were reported in the country. Between weeks 1 and 3 of 2020, a total of 84 suspected cases were reported from 5 regions in the country. In 2019 a total of 10 207 suspected measles cases were reported from eight regions in the country.

The humanitarian crisis in the North-eastern part of Nigeria persists with continued population displacement from security compromised areas characterized by over-crowding in many camps in the region. Due to shrinking humanitarian space health partners are facing challenges in delivery of timely and urgent life-saving assistance as access challenges are impacting movement of mobile medical teams, ambulances, immunization staff and medical cargo in many locations across Borno State. The cholera outbreak in Adamawa State is ongoing, though the number of cases being reported is showing a downward trend.

Three new cases of cholera were reported in Adamawa State from 27 November to 6 December 2019 from Yola North (2) and Yola South (1) Local Government Areas. From 15 May to 6 December 2019, a cumulative total of 839 suspected cases with four deaths have been reported from four LGAs: Yola North (513 cases with two deaths), Girei (200 cases with one death), Yola South (125 cases with one death), and Song (1 case with zero deaths). Of 539 stool specimens collected and analysed at the state specialist hospital, 206 cultured as the causative agent. An outbreak of cholera has also been reported in Andoni Local Government Area, Rivers State. From 27 November to 9 December 2019, a total of 56 cases with 11 deaths were reported from 15 communities in Andoni LGA.

During week 4 of 2020 (week ending 19 January 2020) an additional 21 suspected cases were reported in the country. Between weeks 1 and 3 of 2020, a total of 84 suspected cases were reported from 5 regions in the country.

The country continues to report monkeypox cases since September 2019. Eight new cases were reported in the month of November from five states with no associated deaths. Only one suspected case was confirmed in Oyo state. A total of 106 suspected cases have been reported so far in 2019, 44 of which were confirmed in nine states.

No case of circulating vaccine-derived poliovirus type 2 (cVDPV2) was reported this week. There are 18 cVDPV2 cases reported in 2019 and 34 cVDPV2 cases in 2018.

From 1 January 2019 to 16 November 2019, a total of 3787 suspected yellow fever cases have been reported from 604 out of 774 LGAs across all the 36 states and the Federal Capital Territory. Of the samples taken, 166 have tested positive for yellow fever IgM in Nigerian network laboratories. Also, 129 samples from 18 states were confirmed positive using real time polymerase chain reaction (RT-PCR). There have been 192 deaths among suspected cases (CFR 5.1%) and 20 deaths among confirmed cases (CFR 15.5%), Four states Katsina, Bauchi, Edo and Ebonyi accounted for 62% of all the confirmed cases in 2019.

No new confirmed cases have been reported since 24 November 2019 from Tonkolili district. From 30 October to 6 December 2019, a total of 5 cases (3 confirmed and 2 probable) with 3 deaths have been reported in Tonkolili district. Of the total 71 contacts identified, 38 have completed 21 days of monitoring while 33 are still being followed. In a separate cluster, laboratory confirmed cases with one death were reported from Kenema district from 27 to 28 November 2019. A total of 119 contacts of these cases are being followed.

| South Sudan     | Flood                  | Ungraded  | 28-Oct-19            | 29-Oct-19                  | 30-Jan-20               | -           | -               | -      | -    |

The aftermath of the floods has led to an increase in water-borne diseases such as acute watery diarrhoea and vector-borne diseases such as malaria. The water levels continue to recede in most of the flood affected areas, and most people are returning to their homes. Nevertheless, up to 21 000 flood-affected households in priority locations still require humanitarian assistance in early 2020. An OCV campaign is being planned in Pibor.

| South Sudan     | Humanitarian crisis    | Protracted | 15-Aug-16            | n/a                        | 30-Jan-20               | -           | -               | -      | -    |

The humanitarian situation has been largely calm but unpredictable in most of the states. The number of internally displaced people (IDPs) in South Sudan was estimated at 1.47 million. Malnutrition continues to be a problem in the country as more than 6.35 million people are reported to be severely food insecure in South Sudan. Communicable disease burden remains high with 10 counties reporting malaria cases above their epidemic thresholds and measles cases being reported from 16 counties (Abyei, Mayom, Melut, Aweil South, Aweil East, Tonj North, Juba, Wau, Aweil West, Gogrial West, Gogrial East, Renk, Tonj South, Jur River, Pibor and Yambio) and four protections of civilian (POD) sites (Juba, Bentiu, Malakal and Wau).

| South Sudan     | Measles                | Ungraded  | 24-Nov-18            | 1-Jan-19                   | 19-Jan-20               | 4 701       | 240             | 26     | 0.60% |

The current outbreak in Bentiu POC continues. As of reporting date, a total of 148 cases and two deaths have been recorded from Bentiu POC and a total of 12 suspected cases including 4 confirmed cases in Lankein. The last cases in Lankein were reported in week 25 (week ending on 23 June 2019).

| South Sudan     | Poliomyelitis (cVDPV2) | Grade 2    | 18-Oct-19            | 13-Sep-19                  | 22-Jan-20               | 3           | 3               | 0      | 0.00% |

No new cases of circulating vaccine-derived poliovirus type 2 (cVDPV2) was reported this week. There are four cVDPV2 cases in 2019 in the country linked to Jigawa outbreak in Nigeria.

| Uganda          | Humanitarian crisis - refugee | Ungraded | 20-Jul-17             | n/a                        | 30-Nov-19               | -           | -               | -      | -    |

Between 1 and 31 October 2019, a total of 6 623 new refugee arrivals crossed into Uganda from the Democratic Republic of the Congo (4 016), South Sudan (2 167) and Burundi (440). Uganda hosted 1 362 269 asylum seekers as of 31 October 2019, with 95% living in settlements in 11 of Uganda’s 128 districts and in Kampala. The majority of refugees are from South Sudan (62.9%), the Democratic Republic of the Congo (28.8%) and Burundi (3.5). Most are women within the age group 18 - 55 years.

| Uganda          | Rift valley fever        | Ungraded | 28-Nov-19            | 15-Nov-19                  | 19-Dec-19               | 2           | 2               | 2      | 100.00% |

On 5 December a second confirmed case of Rift Valley fever was reported from Ntoroko district, Uganda. This was a 25-year-old male from the Democratic Republic of Congo who was living and working in Kimara Village, Butungama sub-county in Ntoroko district, Uganda. Following the presentation of haemorrhagic symptoms on 5 December 2019, a viral haemorrhagic disease was suspected, and the case was isolated in an ETC for treatment. A sample was collected and sent to UVRI on the same day and the case-patient later died on 6 December 2019. A safe and dignified burial was conducted on 17 December 2019. As of 19 December 2019, a total of 2 cases and 2 deaths had been reported from Ntoroko and Obongi Districts.

| Uganda          | Yellow fever             | Ungraded | 22-Jan-20            | 31-Oct-19                  | 30-Jan-20               | 15          | 5               | 5      | 33.30% |

As of 30 January 2020, there are 15 cases reported from Moyo and Buliisa District in Uganda. In Moyo District, there are 3 confirmed cases, 2 probable cases and 8 suspected cases. There was a total of 11 deaths. In Buliisa, there are also two confirmed cases and 1 death reported. None of the confirmed cases was vaccinated against yellow fever virus.

| Zambia          | Poliomyelitis (cVDPV2)   | Grade 2    | 17-Oct-19            | 16-Jul-19                  | 18-Dec-19               | 2           | 2               | 0      | 0.00% |

No new case of circulating vaccine-derived poliovirus type 2 (cVDPV2) has been reported this week. The onset of paralysis for the last case was on 13 November 2019 from Kalabo District, Western Province. There was a total of two cVDPV2 cases in 2019.

| Zimbabwe        | Anthrax                 | Ungraded | 6-May-19             | 6-May-19                   | 20-Jan-20               | 286         | 1               | -      | 0.30% |

The anthrax outbreak is ongoing in Zimbabwe with a cumulative total number of 286 cases and one death notified since the beginning of the outbreak in week 36 (Week starting from 6 May 2019) of 2019. This outbreak started since week36, 2019, affecting mainly Buhera and Gokwe North and South districts but a surge in cases started appearing in week 38 when cases were reported in some other areas. Since 1 January to 20 January 2020, a total of 178 cases were reported mainly in Masvingo (119 cases), Midlands (31 cases) and Mashonaland west (28 cases) provinces.
