"The boundaries and names shown and the designations used on this map do not imply the expression of any opinion whatsoever on the part of the World Health Organization concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted and dashed lines on maps represent approximate borderlines for which there may not yet be full agreement."
This Weekly Bulletin focuses on public health emergencies occurring in the WHO African Region. The WHO Health Emergencies Programme is currently monitoring 156 events in the region. This week’s articles cover:

- Measles in Cameroon
- Dengue fever in São Tomé and Príncipe
- Yellow fever in Chad

For each of these events, a brief description, followed by public health measures implemented and an interpretation of the situation is provided.

A table is provided at the end of the bulletin with information on all new and ongoing public health events currently being monitored in the region, as well as recent events that have been controlled and closed.

Major issues and challenges include:

- Cameroon is experiencing a long-standing measles outbreak since 2021 with all its 10 regions affected in 2022. The outbreak has been linked to the low measles vaccination coverages registered across the country. Cameroon is also facing other disease outbreaks including the COVID-19 pandemic, yellow fever and cholera which have already impacted the country’s health system capacities. In addition, the ongoing humanitarian situations have led to overcrowding in the refugee’s camps and among internally displaced persons, which remains a major risk for increased spread of the measles outbreak. Routine measles immunization for children, combined with mass immunization campaigns, are key public health strategies to reduce the measles deaths.

- São Tomé and Príncipe’s first documented dengue fever outbreak continues, however with a declining trend. At the beginning of the outbreak, the country faced many challenges in responding to the outbreak such as limited capacities for surveillance, laboratory, case management, risk communication, and entomology. However, much national and local-level capacity has been built in response to the outbreak, yet a few challenges remain such as insufficient laboratory supplies to carry out diagnosis of the disease.
EVENT DESCRIPTION

Cameroon has been experiencing a measles outbreak since 2021. From week 1 to week 26 2022, a total of 3,702 suspected cases of measles, 1,387 confirmed and 28 deaths (case fatality ratio (CFR) = 0.8%) have been reported in Cameroon. Of the 1,387 confirmed cases, 1,248 (90%) cases are less than 10 years, while 832 (60%) cases are between 9 and 59 months of age. In addition, 433 cases have been laboratory confirmed, 47 were clinically compatible and 907 epidemiologically linked. A total of 1,028 (74.1%) cases reported not to have history of measles vaccination or had no proof of vaccination.

The Far-North region is leading in number of confirmed cases reported with 367 cases (26.5%), followed by the Centre region (294 cases), Littoral (179 cases) and South region with 178 cases. The South-West region has the lowest number of confirmed cases reported so far with 21 cases.

Among the reported cases, 2,005 (54.2%) cases have been investigated giving an investigation rate of 7.6 cases per 100,000 populations (target: ≥ 2 cases/100,000 populations) which is a good performance compared to last year (5.1 cases/100,000 populations). About 86.3% health districts (target: ≥ 80%) have investigated at least one reported case compared to 68.0% for the same period last year.

The overall attack rate for this year is 51.9 per 1,000,000 population which is higher compared to previous year for the same period (14.9 per 1,000,000 population). The South region has the highest attack rate with 114.5 per 1,000,000 population followed by Adamawa region with 90.2 per 1,000,000 population and the North-West region has the lowest attack rate with 9.1 per 1,000,000 population.

The ongoing measles outbreak in Cameroon can be considered as an extension of the previous year outbreak for which an upward trend in number of confirmed measles cases reported was observed since week 46 2021 (ending 21 November) and peaking at week 5 2022 (ending 6 February) with a weekly number of confirmed cases at 131. From week 5 to week 12 2022 (ending 12 March), an average of 98 confirmed cases have been reported weekly, followed by a downward trend reported from week 13 (ending 3 April) to week 26 (ending July 3) 2022.

PUBLIC HEALTH ACTIONS

- Strengthened surveillance activities with localized responses are ongoing within districts. Case investigation has been conducted in majority (86.3%) of the district that reported suspected cases.
- Local measles outbreak vaccinations have been conducted in three districts (Yoko, Ntui and Bafia) with locally mobilized resources achieving 105%, 90.6% and 97.8% of vaccination coverage respectively.
- The Measles and Rubella Initiative request has been submitted on the measles partner platform for possible funding support for outbreak response in 28 districts targeting 1,183,653 children aged between 9 to 59 months. The projected dates for this reactive vaccination campaign are from 24 to 28 August 2022.
- Regular updates of the measles databases and dashboards for effective monitoring of the affected health districts continues.

SITUATION INTERPRETATION

Measles remains a threat in Cameroon due to sub-optimal routine immunisation and catchup campaigns. The magnitude of this year’s measles outbreak is higher compared to last year for the same period. Although surveillance indicators have improved compared to last year, required efforts should be deployed to improve measles vaccination coverage which is still very low, according to the 2021-WHO/UNICEF estimates of national immunization coverage. The planned reactive vaccination campaign is welcome, as it will highlight the importance of keeping high routine vaccine coverage and maintaining effective supplemental activities.
**Event Description**

From 15 April to 12 July 2022, 854 cases and 1 death (CFR 0.1%) have been reported in São Tomé and Príncipe (STP). All health districts have reported cases with Água Grande (614, 71.8%) being the most affected. The other health districts have reported the following: Mézochi (102, 11.9%); Lobata (72, 8.4%); Cantagalo (37, 4.3%); Lemba (14, 1.6%); Caue (9, 1.0%); and Autonomous Region of Príncipe (6, 0.7%).

The attack rate of Água Grande is by far the largest at 72.8 cases per 10,000 inhabitants. The attack rates by age groups are: 0-9 year (21.6 cases per 10,000), 10-19 years (37.2 cases per 10,000), 20-29 years (43.3 cases per 10,000), 30-39 years (52.6 cases per 10,000), 40-49 years (43.8 cases per 10,000) and 50-59 years (52.9 cases per 10,000) and those more than 60 years (47.6 cases per 10,000). The most frequent clinical signs are fever (777, 91%), headache (625, 73%), myalgia (260, 30%), and weakness (136, 16%).

In total, 2,189 cases have been suspected for dengue and were tested by the National Reference Laboratory. All 854 confirmed cases had positive IgM/NS1 results. There have been a total of 102 hospitalizations among confirmed cases, however, only one death has been recorded. Another 829 people have been recorded as recovered from the disease.

Suspected cases were first reported on 11 April 2022, but there is clinical evidence of probable cases prior to that date. The Minister of Health of São Tomé and Príncipe nevertheless officially declared an outbreak of dengue on 4 May 2022, which is the first reported dengue fever outbreak in the country.

The building of entomological capacity has been one of the focuses in the response to the outbreak. Thirty-five national entomological colleagues were trained and henceforth carry out more rigorous work to prevent dengue in the country. The national entomological colleagues along with the support of international entomological experts who were deployed temporarily have conducted various entomological surveys in each district. According to the results of the surveys conducted in May 2022, and compared to international rankings, the country was concluded to be a high-risk area for dengue transmission since risk indices associated with the classification were met. The surveys have allowed for developed a more robust evidence-based response to the outbreak.

STP has a tropical and humid climate with a characteristic rainy season generally lasting 9 months from September to May. In December 2021 to early March 2022, the country experienced torrential rains of high intensity causing flooding and poor sanitation conditions where people reside. These conditions have provided a favourable environment for the proliferation of mosquitoes, vectors of communicable diseases such as Malaria and Dengue fever.

**Public Health Actions**

- Coordination meetings are held weekly by the Ministry of Health to discuss technical aspects of the outbreak;
- A national dengue response plan has been developed, validated and disseminated;
- Epidemiological investigations and active case detections have been conducted;
- An international clinical management expert was deployed with the aim to improve hospital management of cases;
- An international risk communications expert was deployed with the aim to improve public health engagement for dengue fever in the country and communication efforts in the community are ongoing using various methods;
- 30 journalists were trained on risk communication and community engagement that took place from 6-8 July 2022;
- Entomological investigations have been carried out to identify breeding sites and conduct fumigation and source reduction measures in all districts;
- 35 local-level entomologists were trained on the ecology of the Aedes mosquito species and entomological surveillance;
- Further entomological campaigns are being planned such as a large-scale one for Água Grande district for the destruction of breeding sites and integrated vector management approaches in the Bobo Forro market.
SITUATION INTERPRETATION

The dengue fever in STP has continued throughout the country and has reached all health seven districts. Response efforts have been strengthened by the support of international dengue experts including case management, entomological and risk communication experts have been deployed and as a result national capacity has increased for responding to the outbreak. The epidemiological trends in the past few weeks seem to be improving, however, more time is needed to assess the transmission situation.
**EVENT DESCRIPTION**

Chad has been experiencing a yellow fever (YF) outbreak since a case was confirmed in November 2021, although probable cases have been recorded since May 2021. Between May 2021 and 30 June 2022, a total of 48 cases (of which 44 cases (92.0%) were reported in 2021) have been reported, including 24 confirmed and 24 probable cases.

Of the confirmed and probable cases reported, 27 are males (56.3%); the median age is 24 years, with a range of 1 to 56 years. These cases were mostly reported in the southern and central part of the country including Mandoul (10), Moyen Chari (8), Tandjile (3), Guera (2), and Logone Oriental (1) regions.

Five deaths were reported among confirmed cases and two deaths among probable cases, accounting for an overall case fatality rate (CFR) of 14.6%. The last confirmed case had symptom onset on 26 January 2022 while the last probable case had symptom onset on 5 May 2022. Previous YF outbreaks were reported in 2009 and 2012 in areas bordering South Sudan.

**PUBLIC HEALTH ACTIONS**

- A national coordination unit is coordinating the response. Joint investigations have been conducted by Ministry of health and other stakeholders.
- A first reactive campaign was conducted between 19 and 30 January 2022 targeting 1,117,848 persons with a coverage of more than 100%. For this first campaign, seven districts in Mandoul were included (Goundi, Koumra, Bouna, Badeya, Bejondo, Moissala, and Bekouro) as well as one district from Guera (Melfi).
- A second reactive campaign is planned starting in July 2022, targeting 918,980 in nine districts from four regions including Moyen Chari (Koumogou, Korbol, Danamadji, Maro, Sarh, and Balimba), Guera (Niergui), Logone Oriental (Larmanaye) and Tandjile (Lai). All microplans were validated and training modules have been completed and supervisors have been trained. Tools have been printed and vaccine deployment in the field is ongoing.
- Yellow fever vaccination card verification is currently ongoing on entry and exit at the international airport.

**SITUATION INTERPRETATION**

Chad is among the 27 high-risk countries in Africa for YF outbreaks and has been experiencing a YF outbreak since November 2021. Although the YF routine immunization was introduced in 1997, coverage has remained low, well below 50 percent over the years according to WHO and UNICEF estimates. In addition, no mass preventive vaccination campaign has been conducted in recent years. Therefore, there remains a large population to be covered by mass vaccination in order to provide herd immunity to the population. Surveillance still needs to be further strengthened to ensure that no cases are missed.

The IHR focal point from Algeria notified WHO of a confirmed case of Circulating Vaccine-Derived Poliovirus type 2 (cVDPV2). The case is a 1-year old girl residing in Tamanrasset Wilaya (commune of Tamanrasset). She was admitted on 11 April 2022 to the hospital, for acute flaccid paralysis of both lower limbs. The epidemiological investigation carried out on the same day showed that she had not received any dose of OPV or IPV and that she had no history of travel outside the city of Tamanrasset. However, the siblings (3) were correctly vaccinated.

A Cholera case was confirmed in Kantchari medical center, Diapaga health district in the East region of Burkina Faso in a 25-year-old male patient from Niger, where he had stayed before the onset of symptoms. On 5 July 2022, a second suspected case, a female of 30 years old from Kantchari has been reported. There is no epidemiological link with the confirmed case reported on 2 July 2022.

Between 9 March 2020 and 31 May 2022, a total of 21 044 confirmed cases of COVID-19 with 387 deaths and 20 497 recoveries have been reported from Burkina Faso.

**Burkina Faso**  
Poliomyelitis (cVDPV2) Grade 2 1-Jan-20 1-Jan-20 13-Jul-22 68 68 0 0.0%

No new cases of circulating vaccine-derived poliovirus type 2 were reported this week. There were two cases reported in 2021, and 66 in 2020. The country is affected by different outbreaks, one linked to the Jigawa outbreak in Nigeria and one to the Savanes outbreak in Togo.

**Burundi**  
COVID-19 Grade 3 31-Mar-20 18-Mar-20 7-Jul-22 42 836 42 836 15 -

On 31 March 2020, the Minister of Health in Burundi reported the first two confirmed cases of COVID-19. As of 7 July 2022, the total number of confirmed COVID-19 cases is 42 836, including 15 deaths and 42 472 recovered.

**Cape Verde**  
COVID-19 Grade 3 14-Mar-20 14-Mar-20 4-Jul-22 14 712 14 712 113 -

The first COVID-19 confirmed case was reported in Cape Verde on 19 March 2020. As of 16 July 2022, a total of 61 922 confirmed COVID-19 cases including 409 deaths and 61 174 recoveries were reported in the country.

**Central African Republic**  
COVID-19 Grade 3 14-Mar-20 14-Mar-20 4-Jul-22 14 712 14 712 113 -

The conflict in CAR has intensified since the beginning of 2022. According to UN OCHA, between January 2021 and May 2022, 31 civilians were killed and 49 injured in 75 accidents and incidents involving landmines and other explosive devices. In April 2022, CAR reported one of the highest proportions of critically food insecure people in the world. The situation is particularly worrying in the Bakouma, Kouli, Ngoundaye, Gbo and Zémio Sub-prefectures where the proportion of people affected by food insecurity is between 65% and 75%. Overall, 3.1 million people (63% of the total population) are in need of assistance and protection in 2022.

**Cameroon**  
Humanitarian crisis (NW & SW) Protracted 2 1-Oct-16 27-Jun-2018 11-May-22 - - - -

According to UNHCR reports, an estimated 579 136 Internally Displaced People have been registered as of 30 April 2022. Targeted attacks on various groups such as traditional leaders, school staff, students, and humanitarian workers are still being reported. There has been an increase in the use of improvised explosive devices, carjacking, and clashes between security forces and NSAGs, leading to civilian population displacement. In addition, there are 478 066 refugees, of whom nearly 345 622 (72.3%) arrived from Central African Republic.

**Cameroon**  
Cholera Grade 2 31-Dec-13 27-Jun-2017 11-May-22 - - - -

According to UNHCR and OCHA reports, an estimated 1 942 054 people need assistance, 357 631 people are internally displaced and 135 257 people are returnees, as of 30 April 2022.

**Cameroon**  
Yellow fever Grade 2 7-Feb-21 4-Jan-21 26-Jun-22 780 15 14 1.8%

As of 26 June 2022, the Cameroon has notified 31 suspected cases of yellow fever with two deaths (CFR 6.5%) from six districts across three regions, since the beginning of 2022. Ten samples have been collected and six cases have been laboratory confirmed from Ayos Health District (3), Kumba Health District in the South-West region (2) and Benakuma Health District in the North-West region (1). Males and females are equally affected and the median age is 17.3 years (range 1-36 years).

**Cameroon**  
Measles Ungraded 2-Apr-19 1-Jan-22 3-Jul-22 3 702 1 387 28 -

From week 1 to 26, 2022 (ending on 3 July 2022), 227 new suspected cholera cases including two deaths have been reported in Cameroon. As of 3 July 2022, a total of 9 737 suspected cases of cholera and 181 deaths (CFR 1.9%) have been reported since October 202. South-West (5 993 cases, 92 deaths), Littoral (3 148 cases, 77 deaths), and Centre (275 cases, four deaths; CFR), have reported the most cases. The general trend of the outbreak is increasing and its epicentre has shifted from South-West to Littoral. Cases are aged between 2 months and 99 years with a median age of 27 years. Females are twice less affected than males (M/F sex ratio = 2:1).

**Cameroon**  
Polio (cVDPV2) Grade 2 1-Jan-20 1-Jan-20 26-Jun-22 10 10 0 0.0%

No case of circulating vaccine-derived poliovirus type 2 (cVDPV2) was reported during epi week 25, 2022. There are three cases reported in 2021 and seven cases in 2020. No case has yet been reported for 2022.

**Cameroon**  
Yellow fever Grade 2 7-Feb-21 4-Jan-21 26-Jun-22 780 15 14 1.8%

From 1 January 2022 to 26 June 2022, a total of 780 suspected cases of yellow fever were investigated including 27 probable cases (tested IgM positive) and 15 confirmed cases (tested positive by plaque reduction neutralization test). Fourteen deaths were recorded, giving a CFR of 1.8%. All 10 regions of the country have notified one or several suspected cases. The confirmed cases are from six regions and 15 Health Districts of the country.

**Central African Republic**  
Humanitarian crisis Protracted 2 11-Dec-13 11-Dec-2013 29-Jun-22 3 100 000 - - -

The conflict in CAR has intensified since the beginning of 2022. According to UN OCHA, between January 2021 and May 2022, 31 civilians were killed and 49 injured in 75 accidents and incidents involving landmines and other explosive devices. In April 2022, CAR reported one of the highest proportions of critically food insecure people in the world. The situation is particularly worrying in the Bakouma, Kouli, Ngoundaye, Gbo and Zémio Sub-prefectures where the proportion of people affected by food insecurity is between 65% and 75%. Overall, 3.1 million people (63% of the total population) are in need of assistance and protection in 2022.

**Central African Republic**  
COVID-19 Grade 3 14-Mar-20 14-Mar-20 4-Jul-22 14 712 14 712 113 -

The Ministry of Health and population announced the confirmation of the first COVID-19 case in Central African Republic on 14 March 2020. As of 4 July 2022, a total of 14 712 confirmed cases, 113 deaths and 14 310 recovered were reported.
From week 1 to week 25 2022 (ending 26 June), a total 1 074 suspected cases of measles including one death (CFR 0.1%) have been reported through IDS system; among the cases, 99 were confirmed including 49 by laboratory confirmation and 50 by epidemiological link. Four districts are in confirmed measles outbreak (Bimbo confirmation at week 10, Kouange-Grimari at week 11, Alindao at week 14 and Haute-Kotto at week 20.)

As of 14 June 2022, Central African Republic has so far recorded 17 suspected cases of monkeypox including eight confirmed cases and two deaths (CFR 11.8%), for year 2022. The confirmed cases were reported from three health districts: Mbaïki (six cases, two deaths), Alindao (one case, no death) and Bimbo (one case, no death).

On 3 August 2021, an 18-month-old girl from Mala village in the Kemo district, Central African Republic, tested positive for yellow fever by plaque reduction neutralization test at the Centre Pasteur of Cameroon. As of 28 June 2022, a total of 542 suspected cases of yellow fever have been reported including five probable and 20 confirmed cases. Three deaths have so far been recorded (CFR 0.6%). Three regions are currently affected, with 70% of confirmed cases reported from RS3.

More than 2.1 million people are in food and nutrition insecurity in Chad. The Decline in agro-pastoral productivity is affecting nutritional status of the populations. According to OCHA, more than 1.5 million of the most vulnerable people are at risk of not receiving assistance.

The first COVID-19 confirmed case was reported in Chad on 19 March 2020. As of 11 July 2022, a total of 7 427 confirmed COVID-19 cases were reported in the country including 193 deaths.

On 13 November 2021, the Institut Pasteur in Dakar confirmed two samples from Mandoul district, Chad, positive for yellow fever. As of 28 June 2022, there has been 1 524 cases reported in Chad, including 24 probable and 24 confirmed cases with seven deaths (CFR 0.5%). Of note, there has been a decrease in the number of cases over the past ten weeks. Mandoul and Moyen Chari provinces are the current hotspots, for having reported 45% and 32% of confirmed cases, respectively. A total of 19/126 districts in 7/23 provinces have been affected since the beginning of the outbreak.

The first case of confirmed COVID-19 was notified on 30 April 2020 in Comoros. As of 13 July 2022, a total of 8 249 confirmed COVID-19 cases, including 160 deaths and 8 037 recoveries were reported in the country.

The Government of Congo announced the confirmation of the first case of COVID-19 in Congo on 14 March 2020. As of 7 July 2022, a total of 24 483 cases including 386 deaths and 23 644 recovered cases have been reported in the country.

Congo COVID-19 Grade 3 14-Mar-20 14-Mar-20 7-Jul-20 24 24 386 1.6%

From week 1 to week 23, 2022 (ending 12 June), a total of 214 lab confirmed measles cases and 6 314 epidemiologically linked cases and 132 deaths (CFR 2%) have been reported in Congo; 23 out of 52 districts for the country (44%) are in outbreak mode. Nationwide multi-intervention campaigns including measles outbreak response vaccination, Vitamin A supplementation and deworming are planned.

Since the beginning of 2022, seven suspected cases with three deaths have been reported from Impfondo District in the country's northern department of Likouala on the border with the Democratic Republic of Congo and Central Africa. Samples from two cases sent to the National Institute of Biomedical Research Laboratory in Kinshasa on 12 April 2022 were laboratory-confirmed.

From 1 January 2018 to 31 May 2022, a total of 197 cases and 16 deaths (CFR 8.1%) have been reported from four provinces (N'Djamena, Borkou, Tibesti and Ouaddai). The majority of cases are male (70.1%). The under five years old patients are 74 (38.0%). In 2022, 30 cases and two deaths have been reported.

As of epi week 24 (ending on 19 June 2022), seven cases of circulating vaccine-derived poliovirus type 2 (cVDPV2) have been reported since the beginning of 2022. There were 106 cVDPV2 cases reported in 2020 from three different outbreaks, while nine other cases were reported in 2019. The risk of further cVDPV2 spread across the Lake Chad subregion remains high.

Since 1 November 2021, 122 cVDPV2 cases have been reported in the district of Mandoul, for which the final sample was taken on 13 July 2022.

On 13 November 2021, the Institut Pasteur in Dakar confirmed two samples from Mandoul district, Chad, positive for yellow fever. As of 28 June 2022, there has been 1 524 cases reported in Chad, including 24 probable and 24 confirmed cases with seven deaths (CFR 0.5%). Of note, there has been a decrease in the number of cases over the past ten weeks. Mandoul and Moyen Chari provinces are the current hotspots, for having reported 45% and 32% of confirmed cases, respectively. A total of 19/126 districts in 7/23 provinces have been affected since the beginning of the outbreak.

As of epi week 24 (ending on 19 June 2022), seven cases of circulating vaccine-derived poliovirus type 2 (cVDPV2) have been reported since the beginning of 2022. There were 106 cVDPV2 cases reported in 2020 from three different outbreaks, while nine other cases were reported in 2019. The risk of further cVDPV2 spread across the Lake Chad subregion remains high.

Since 11 March 2020, a total of 84 583 confirmed cases of COVID-19 have been reported from Côte d'Ivoire including 806 deaths, and a total of 83 482 recoveries.
**Republic of the Congo**

- **Humanitarian crisis**
  - Protracted
  - Start of reporting period: 20-Dec-16
  - End of reporting period: 17-Apr-2017
  - Total cases: 6 692
  - Cases Confirmed: 404
  - Deaths: 107
  - CFR: 16.6%

In the DRC, humanitarian partners reported at least 126 incidents affecting humanitarian access between January and March 2022, including 38 (30%) in North Kivu province, 32 (25%) in Tanganyika, 24 (19%) in South Kivu province, 19 (15%) in Ituri. In North Kivu province, clashes between the Congolese army and suspected M23 fighters have been observed since May 19, 2022 in the territories of Rutshuru and Nyiragongo. As a result, the fighting has displaced at least 25 000 people, according to humanitarian sources. The resumption of clashes in and around Bunagana has affected humanitarian activities which had resumed. Traffic has been interrupted on the axis linking Burayi and Bunagana, where thousands of displaced and returnees have been waiting for assistance since the start of the violence last March.

- **COVID-19**
  - Grade: 3
  - Start of reporting period: 10-Mar-20
  - End of reporting period: 3-Jul-22
  - Total cases: 91 737
  - Cases Confirmed: 4 735
  - Deaths: 1 376
  - CFR: 16.6%

Since the start of the COVID-19 outbreak, declared on 10 March 2020, a total of 91 737 confirmed cases and 1 376 deaths have been reported. A total of 82 922 people have recovered.

- **Measles**
  - Ungraded
  - Start of reporting period: 12-Oct-21
  - End of reporting period: 19-Jun-22
  - Total cases: 71 327
  - Cases Confirmed: 4 735
  - Deaths: 1 001
  - CFR: 16.6%

From week 1 to week 24 of 2022 (ending 19 June), 71 327 suspected cases and 1 001 measles related deaths (1.4%); 3 347 cases investigated through the case based surveillance system; 1 388 tested IgM+ for Measles; 63% lab confirmed measles cases are children under five years old, and only 25% with history of vaccination. The number of total suspected cases and confirmed cases have been revised following data cleaning process (from 73 152 and 4 890 to 71 327 and 4 735 respectively).

- **Monkeypox**
  - Ungraded
  - Start of reporting period: 30-Mar-19
  - End of reporting period: 5-Jun-22
  - Total cases: 1 476
  - Cases Confirmed: 107
  - Deaths: 65
  - CFR: 4.4%

From 1 January – 5 June 2022, the Democratic Republic of the Congo reported 1 476 suspected cases with 65 deaths (CFR 4.4%) from 103 health zones across 20 provinces. The most affected provinces in 2022 are: Sankuru (525 cases, 35.6%), Tshopo (198 cases, 13.4%), Maniema (182 cases, 12.3%), Tshuapa (123 cases, 8.3%) and Sud-Ubangi (111 cases, 7.5%). At least 107 of the cases sampled were confirmed positive for monkeypox virus infection.

- **Plague**
  - Ungraded
  - Start of reporting period: 12-Mar-19
  - End of reporting period: 5-Jun-22
  - Total cases: 261
  - Cases Confirmed: 6
  - Deaths: 6
  - CFR: 2.3%

Between epidemiological weeks 1-22 of 2022, 261 cases of suspected bubonic plague have been reported with 6 deaths (CFR 2.3%). All cases have been reported from Ituri Province Lokpa sanitation area has reported the majority of suspected cases (217, 83.1%) in 2022. Cases are up by more than 100% from the same period in 2021, when a total of 115 were suspected including 13 deaths (11.3% CFR). This increase is a consequence of the intensification of active search for cases in the community as part of a collaborative response to the plague epidemic.

- **Poliomyelitis (cVDPV2)**
  - Grade: 2
  - Start of reporting period: 26-Feb-21
  - End of reporting period: 13-Jul-22
  - Total cases: 91
  - Cases Confirmed: 91
  - Deaths: 0
  - CFR: 0.0%

No case of circulating vaccine-derived poliovirus type 2 (cVDPV2) was reported this week. The number of 2022 cases stands at 63 and 28 for 2021.

- **Suspected Meningitis (Gombari health Zone)**
  - Ungraded
  - Start of reporting period: 31-May-22
  - End of reporting period: 27-Jun-22
  - Total cases: 75
  - Cases Confirmed: 1
  - Deaths: 20
  - CFR: 26.7%

Gombari health zone team investigated an alert of successive meningitis deaths of four adult patients of unknown cause, all residents of the Konzokonvu village, in Apodo health area. Samples were sent to the National Reference Laboratory in Kinshasa for further analysis and one sample tested positive for Neisseria Meningitidis. As of 27 June 2022, a total of 75 cases and 20 deaths (CFR 26.7%) have been reported from four health areas (Apodo, Kossia, Akpandau and Tangi) of the Gombari health zone, province of Haut Uele, in the North-East of the Democratic Republic of Congo. More samples are still needed for testing in order to confirm the outbreak and detect the predominant germ for vaccination.

- **Typhoid fever**
  - Ungraded
  - Start of reporting period: 1-Jul-21
  - End of reporting period: 5-Jun-22
  - Total cases: 837 074
  - Cases Confirmed: 401
  - Deaths: -
  - CFR: -

In 2022, from epidemiological week 1 to 22 (ending 5 June 2022), 837 074 suspected cases of typhoid fever were recorded in the Democratic Republic of the Congo. In 2021, from Epi week 1 to 49, 1 380 955 suspected cases of typhoid fever have been reported including 502 deaths (CFR 0.3%).
Since 2021, 138 out of 519 districts have reported at least one suspect case of yellow fever with an average of about 16 suspect cases reported every week. As of 13 June 2022, 11 probable cases and four confirmed yellow fever cases have been reported in three provinces including Kasai, Nord Ubangui and Kinshasa. The two confirmed cases in Kinshasa Province were reported in Limete and Kingasani health zones. The figures of probable and confirmed cases have been revised following data cleaning.

**Equatorial Guinea**

COVID-19  Grade 3

14-Mar-20  14-Mar-20  7-Jul-22  16,383  16,383  183

The Ministry of Health and Welfare announced the first confirmed COVID-19 case on 14 March 2020. As of 7 July 2022, a total of 16,383 cases have been reported in the country with 183 deaths and 15,814 recoveries.

**Eritrea**

Drought/food insecurity  Grade 3

17-Feb-22  1-Jan-22  10-Jun-22  -  -  -

Eritrea is among the countries at high risk of inflation due to the Ukraine war. The Horn of Africa is experiencing one of the harshest droughts in recent history. As of 10 June 2022 according to UNOCHA, at least 18.4 million people are facing acute food insecurity and rising malnutrition across Ethiopia, Kenya and Somalia, and this figure could increase to 20 million by September 2022. Eritrea has been included as one of the countries affected. Around 75,000 pastoralists and agro-pastoralists are affected by the drought in the Northern Red Sea (NRS) and Southern Red Sea areas.

**Gabon**

COVID-19  Grade 3

12-Mar-20  12-Mar-20  6-Jul-22  48,157  48,157  305

On 12 March 2020, the Ministry of Health announced the confirmation of the first COVID-19 case in the country. As of 7 July 2022, a total of 48,157 cases including 305 deaths and 46,391 recoveries have been reported in the country.

**Gambia**

COVID-19  Grade 3

17-Mar-20  17-Mar-20  12-Jul-22  12,028  12,028  368

The first COVID-19 confirmed case was reported in the Gambia on 17 March 2020. As of 12 July 2022, a total of 12,028 confirmed COVID-19 cases including 368 deaths, and 11,645 recoveries have been reported in the country.
As of 9 July 2022, a total of 167 215 confirmed COVID-19 cases have been reported in Ghana. There have been 1 456 deaths and 165 133 recoveries reported.

Cumulatively, 3,460 samples have been tested with 773 confirmed as Influenza A(H3N2) positive. Approximately, 74.5% of cases were reported by Eastern (33.1%), Greater Accra (29.5%) and Volta (11.9%). Cases have been confirmed in all regions except, Upper East, Upper West and North East Regions.

The Ministry of Health in Ghana notified two suspected cases of Marburg Virus Disease (MVD) on 7 July 2022 in Ashanti region. The two cases come from two different locations in the Ashanti Region and no epidemiological link was established during the preliminary epidemiological investigation. Preliminary laboratory results from the Noguchi Memorial Institute for Medical Research suggest that the infection is due to Marburg Virus. The samples sent to the Institute Pasteur in Dakar, Senegal for confirmation turned positive for MVD. As of 17 July a total of 98 contacts was listed and contacts are under quarantine and being followed.

The Ministry of Health in Ghana notified two suspected cases of Marburg Virus Disease (MVD) on 7 July 2022 in Ashanti region. The two cases come from two different locations in the Ashanti Region and no epidemiological link was established during the preliminary epidemiological investigation. Preliminary laboratory results from the Noguchi Memorial Institute for Medical Research suggest that the infection is due to Marburg Virus. As of 17 July a total of 98 contacts was listed and contacts are under quarantine and being followed.

On 8 June 2022, the Director General of the Ghana Health Service confirmed that 5 cases of monkeypox have been detected in the country. From 24 May-30 June, 2022 there have been 159 suspected cases including 19 confirmed and no deaths reported from Eastern, Western, and Greater Accra.

From 15 October 2021, suspected cases of yellow fever were reported mostly among nomadic settlers in the Savannah Region, northwest Ghana (bordering Côte d’Ivoire). As of 15 June 2022, a total of 68 probable and 60 confirmed cases of yellow fever were reported from 13 regions in Ghana. Of the reported cases, nine deaths were recorded among probable cases and 12 deaths confirmed among confirmed cases.

Since the beginning of 2022 up to week 21 (ending 27 May), a total of 21 194 measles suspected cases with 397 confirmed and 33 death (CFR 0.2%) have been reported in Ghana from 29 health districts including the capital city Conakry through Integrated disease surveillance and response.

No new cases of circulating vaccine-derived poliovirus type 2 (cVDPV2) were reported this week. So far, we have 6 cases reported in 2021. The total number of 2020 cases has been corrected to 44.

On 25 March 2020, the Ministry of Health of Ghana announced the first confirmed case of COVID-19 on 13 March 2020. As of 3 July 2022, a total of 37 351 cases including 36 640 recovered cases and 445 deaths have been reported in the country.

On 12 March 2020, the Ministry of Health announced the confirmation of one new COVID-19 case in the country. As of 17 July 2022, 336 740 confirmed COVID-19 cases have been reported in Kenya. There have been 5 668 deaths and 336 740 recoveries reported in the country.

At least 4.1 million (27% of total population) are estimated to face high levels of acute food insecurity (IPC Phase 3 or above) during March-June 2022. About 1.1 million of those are IPC phase 4 (emergency) and 3 million are in IPC phase 3 (crisis). An estimated 229 000 children <5 years are projected to have severe acute malnutrition (SAM) and another 713 000 will have moderate acute malnutrition (MAM). As of 10 June 2022 according to UNOCHA, at least 18.4 million people are facing acute food insecurity and rising malnutrition across Ethiopia, Kenya and Somalia, and this figure could increase to 20 million by September 2022. At least 7 million livestock—which pastoralist families rely upon for sustenance and livelihoods—have died. So far in 2022, about 6.5 million drought-affected people have been reached with humanitarian assistance across Somalia (almost 2.8 million), Ethiopia (3.3 million) and Kenya (367 000).

Chikungunya outbreak has been reported in Wajir County, Tarbaj sub county in Kutulo village. A total of one hundred and eighty nine (189) cases have been reported with five confirmed cases and one death (CFR 0.5%). No new cases was reported in week 25 (ending 26 June 2022).

Cholera outbreak is ongoing in Kenya affecting three counties: Nairobi, Kisumu and Kiambu. As of 31 May 2022, a total of 319 cases with two confirmed by culture and two deaths (CFR 0.6%) have been reported. Kisumu has reported more cases (311), followed by Nairobi (7) and Kiambu (1). Response activities are ongoing to control the outbreak.

On 12 March 2020, the Ministry of Health announced the confirmation of one new COVID-19 case in the country. As of 17 July 2022, 336 740 confirmed COVID-19 cases including 5 668 deaths and 329 673 recoveries have been reported in the country.

Since January 2020, a total of 1 766 visceral leishmaniasis (185 suspected and 1 581 confirmed) cases have been reported in Marsabit, Garissa, Kitui, Baringo, West Pokot, Madera, and Wajir Counties with a total of 10 deaths reported (CFR 0.6%). The outbreak is active in three counties: West Pokot County in Pokot North, Pokot south and West Pokot Sub counties; Wajir County in Wajir North, Eldas and Wajir West Sub – Counties and Kitui county from Mwingi North and Mwingi Central Sub-counties.

Measles outbreak has been reported from Marsabit and Wajir Counties. A total of 19 cases with eight confirmed cases have been reported with no death. Active case search on the surrounding facilities is ongoing. In Wajir county, cases are reported from Wajir East sub county with six cases and three confirmed and in Marsabit county, cases were reported in North Horr sub county with 13 cases and five confirmed.
Health Emergency Information and Risk Assessment

Country | Event | Grade | Start of reporting period | End of reporting period | Total cases | Cases Confirmed | Deaths | CFR |
---|---|---|---|---|---|---|---|---|
Kenya | Yellow fever | Grade 2 | 3-Mar-22 | 12-Jan-22 | 17-Jun-22 | 3 | 3 | 0 | 0.0% |

On 4 March 2022, Kenya declared an outbreak of yellow fever in Isiolo County. As of 15 March 2022, there are a total of 53 suspect cases of yellow fever including six deaths reported from 12 January to 15 March 2022 in 11 wards of Isiolo county. Of the suspected cases, three were confirmed by PCR at the Kenya Medical Research institute.

Lesotho | COVID-19 | Grade 3 | 13-May-2020 | 13-Jul-22 | 34 040 | 34 040 | 702 | 2.1% |

Since the first confirmed COVID-19 case was reported in Lesotho on 13 May 2020, until 7 June 2022, a total of 34 040 cases of COVID-19 have been reported, including 25 009 recoveries and 702 deaths.

Liberia | COVID-19 | Grade 3 | 16-Mar-20 | 16-Mar-20 | 14-Jul-22 | 7 505 | 7 505 | 294 | 3.9% |

From 16 March 2020 to 14 July 2022, Liberia has recorded a total of 7 505 cases including 294 deaths and 7 206 recoveries have been reported.

Liberia | Lassa Fever | Ungraded | 3-Mar-22 | 6-Jan-22 | 8-Jun-22 | 25 | 25 | 7 | 28.0% |

Since the beginning of 2022 up to 8 June 2022, a total of 70 suspected cases of Lassa fever including 25 confirmed and 7 deaths (CFR 28%) have been reported in Liberia. Two Counties are currently in an outbreak: Grand Bassa and Bong Counties.

Liberia | Measles | Ungraded | 3-Feb-22 | 1-Jan-22 | 2 338 | 3 027 | 35 | - |

As of 22 May 2022, 3 338 suspected cases, including 3 027 confirmed and 35 deaths (CFR 1%) were reported from 47 health districts in 14 counties. Of the confirmed cases, 9% (287 cases) were laboratory confirmed, 15% (448 cases) were clinically confirmed, and 76% (2 292 cases) by epidemiological link. The median age of the affected population is 5 years (range: 1 month-67 years). Measles vaccination coverage in confirmed cases is 43% and the vaccination status of 10% of confirmed is unknown.

Madagascar | Floods | Grade 2 | 19-Jan-22 | 16-Jan-22 | 8-Jun-22 | 571 000 | 214 | - |

Heavy rains in Madagascar from multiple weather systems (Tropical Storm (TS) Ana, Cyclone Batsirai, TS Dumako, Cyclone Emnati, TS Gombe, and TS Jasmine) have flooded parts of the country. The TS Ana weather system affected the country during week 3 of 2022, Cyclone Batsirai occurred in week 5, TS Dumako in week 7, Cyclone Emnati in week 8, TS Gombe in week 10, and TS Jasmine in week 16. As of 8 June 2022, there have been 571 000 victims affected including 214 deaths by the six tropical cyclones: Ana, Batsirai, Dumako, Emnati, Gombe and Jasmine in 18 regions though Analamanga area was most affected. Health risk identified: Malaria, diarrhoeal diseases, plague, malnutrition, VPD, COVID 19. With increase in malaria cases since week 17; In week 20, 19/114 districts in 4 regions were in epidemic phase and 21/114 were in alert phase in 2 regions. A total of 172 000 persons displaced by the effects of these Cyclones.

Madagascar | Malnutrition crisis | Grade 2 | 1-Jul-21 | 1-Jan-21 | 8-Jun-22 | - | - | - |

Extreme weather producing droughts during part of the year and heavy rains causing flooding during other parts of the year have contributed to food insecurity issues for an estimated 1.7 million people (32% of the total population) in Madagascar who are projected to face integrated food security Phase Classification (IPC) 3 or higher during April to August 2022. IPC projections estimate that 189 056 people are classified as emergency phase 4 and a little more than 1.5 million are classified as IPC Phase 3. Food insecurity and malnutrition improved in the first quarter of 2022 following a large-scale up in humanitarian assistance.

Madagascar | COVID-19 | Grade 3 | 20-Mar-20 | 20-Mar-20 | 17-Jul-22 | 66 289 | 66 289 | 1 406 | 2.2% |

Madagascar Ministry of Health announced the confirmation of the first COVID-19 case on 20 March 2020. As of 17 July 2022, a total of 66 289 confirmed cases including 1 406 deaths have been reported in the country.

Madagascar | Malaria | Ungraded | 30-Jun-2022 | 30-Jun-22 | 543 994 | 543 994 | 68 | 0.0% |

During epi week 22 (ending on 5 June 2022), Madagascar registered 15 576 cases of malaria, including three deaths (CFR 0.02%). From epi week 1-22, 543 994 cases and 68 deaths (CFR 0.01%) have been reported. Since epi week 21 (ending on 29 May 2022), 19 health districts have crossed their epidemic threshold: Ambodiradrimo and Antananarivo Ranihivitra in Analamanga region; Taolagnaro in Anosy region; Farafangana in Atsimo Atsinanana region; Mitsinjo in Boeny region; Ambohimahasoa, Filanarasa I, Isandra, Lalangina and Vohibato in Haute Matsatira region; Ivolibe in Ihorombe region; Arivonimamo and Marinarivo in Itasy region; Ambatontany, Antsalova and Morafenobe in Melaky region; Morondava in Menabe region; Antanifotsy in Vakinankaratra, and Ifanadiana in Vatovavy region.

Madagascar | Poliomyelitis (cVDPV1) | Grade 2 | 28-Apr-21 | 26-Apr-21 | 4-May-22 | 14 | 14 | 0 | 0.0% |

No case of circulating vaccine-derived poliovirus type 1 (cVDPV1) was reported this week. The number of 2021 cases remains 13. There is one case in 2022.

Malawi | Cholera | Ungraded | 3-Mar-22 | 3-Mar-22 | 17-Jul-22 | 883 | 13 | 40 | 4.5% |

Malawi is currently responding to the aftermath of the cyclone Ana and Gombe that occurred on 28 January 2022 and 13 March 2022 respectively. The disaster displaced a number of households, damaged household property, injuries as well as damage to infrastructure and caused several deaths in the southern part of the country. Approximately, more than 1 million people were affected, with 51 deaths recorded. The decommissioning of IDP camps in affected districts is ongoing. Mulanje and Balaka districts have decommissioned all IDP camps whilst Nsanje has only six active IDP camps.

Malawi | COVID-19 | Grade 3 | 2-Apr-20 | 2-Apr-20 | 17-Jul-22 | 86 931 | 86 931 | 2 653 | 3.10% |

On 2 April 2020, the president of Malawi announced the first confirmed cases of COVID-19 in the country. As of 17 July 2022, the country has a total of 86 931 confirmed cases with 2 653 deaths and 83 399 recoveries.

Malawi | Poliomyelitis | Ungraded | 31-Jan-22 | 1-Feb-2022 | 30-Jun-22 | 1 | 1 | 0 | 0.0% |

One positive case of wild WPV1 was detected in Lilongwe from a child with the date of onset of paralysis on 19 November 2021. No other cases have been reported. However, response activities including community sensitisation and mass polio vaccination campaigns continue.

Health Emergency Information and Risk Assessment
People in Mali are reeling from the impact of years of conflict, deep poverty, climate shocks and mounting insecurity. In May 2022, 7.5 million people need humanitarian assistance. One Malian out of four (4.8 million people) is currently food insecure because of insecurity and the impacts of climate change. During this year’s lean season (June to August), a staggering 1.8 million people will be acutely food insecure. However, the Humanitarian Response Plan for Mali is currently funded at only 11 per cent.

On 25 March 2020, the Ministry of Health of Mali reported the first COVID-19 confirmed cases in the country. As of 17 July 2022, a total of 31 200 confirmed COVID-19 cases have been reported in the country including 737 deaths and 30 638 recoveries.

As of 5 June 2022, a total of 1 536 suspected cases of measles and 563 confirmed and one death (CFR 0.1%) have been reported in Mali through integrated disease surveillance and response (IDSR) system. A total of 37 out of 75 health districts have confirmed measles outbreak, of which 13 health districts have received vaccines for response. The most affected age group is from 0 to 59 months.

The government of Mauritania announced its first confirmed COVID-19 case on 13 March 2020. As of 16 July 2022, a total of 61 865 cases including 986 deaths and 59 267 recovered have been reported in the country.

The Republic of Mauritius announced the first three positive cases of COVID-19 on 18 March 2020. As of 10 July 2022, a total of 224 289 confirmed COVID-19 cases including 1008 deaths have been reported in the country.

On 11 March 2022, a severe tropical cyclone Gombe made landfall over the coastal area of central Nampula province, with maximum sustained winds up to 190km/h. Figures on people affected and damage following the passage of Cyclone Gombe continues to rise. According to the latest information released by the National Institute for Disaster Management and Risk Reduction (INGD), to date Gombe has affected 478 237 people (93 497 families), caused 59 deaths, and injured 82 people. These figures on the impact are expected to rise as widespread damage has occurred through in-depth assessments have not yet taken place. This cyclone Gombe follows tropical storm Ana which hit the country in January, and tropical depression Dumako which struck in February. Together, these previous storms have already affected more than 2 000 000 people in Nampula, Zambezia and Tete provinces.

The safety situation in Cabo Delgado remains unpredictable and volatile. As of 31 March 2022, the nationwide estimate of people in need of humanitarian assistance is 822 108 and 266 246 people are displaced by conflict.

Cholera outbreak has been reported from Sofala and Zambezia provinces of Mozambique. From 13 January to 26 June 2022, a total of 3 256 cases and 15 deaths (CFR 0.5%) have been reported. In Sofala province, cases have been reported from Caia (707, 21.7%), M various districts. In Zambezia province, cases have been reported from Morrumbala (1 333, 40.9%), Mocuba (589, 18.0%), and Quelimane City (253, 5.9%) districts. A total of 63 samples have been tested, of which 41 have returned positive for cholera by rapid diagnostic test (RDT) and 16 turned positive by culture. Response activities are ongoing.

The first COVID-19 confirmed case was reported in Mozambique on 22 March 2020. As of 14 July 2022, a total of 228 887 confirmed COVID-19 cases were reported in the country including 2 215 deaths and 226 271 recoveries.

The first COVID-19 confirmed case was reported in Namibia on 14 March 2020. As of 14 July 2022, a total of 166 366 confirmed cases with 4 069 deaths have been reported.

On 2 June 2022, the Ministry of Health and Social Services of Namibia notified WHO about a confirmed outbreak of measles in Omusati region, Ondangwa district. A total of 23 cases are suspected in the region which shares a border with Angola. The majority of suspected cases (14, 61% of total) have been reported from a school in Ondangwa District, however, Tsandi (8 cases) and Okahao (1 case) Districts have also reported suspected cases. Among the cases, five had positive IgM results for measles. All confirmed/compatible cases are <15 years of age, ranging between 5 months- 12 years. Four of the confirmed/compatible cases are females and two are males.

There is an increasing number of security incidents reported in the first five months of the year. Since the beginning of May 2022, a total of 16 193 people have been forced to move to the communes of Torodi and Makalondi. More that 17 000 people also have fled Mali to settle in Niger’s Tillaberi and Tahoua regions. As of 30 June 2022, a total 264 257 Internally Displaced Persons were registered. Food insecurity remains one of the major challenges faced by the country. Diffa and Tillaberi regions are the most affected by food insecurity with 24% and 29% of the population affected respectively.

From 19 March 2020 to 1 July 2022, a total of 9 090 cases with 311 deaths have been reported across the country. A total of 8 762 recoveries have been reported from the country.

From week 1 to week 15 (ending 17 April) of 2022, a total of 6 103 cases and 6 deaths (CFR: 0.1%) have been reported. Among the eight regions for the country, Agadez has the highest attack rate (59.8 cases per 100 000 inhabitants), followed by Niamey (46.7 cases /100 000). Risk assessment found: 17 districts of 72 for the country at very high risk while 21 districts are at high risk. The response plan is being finalized in order to vaccinate in the 38 high risk and very high-risk districts as well as 11 districts in outbreak but not yet reflected in the risk profile.

Since the beginning of the year 2021 to week 2 of 2022 ending 16 January 2022, 6 188 cases have been reported with 76 deaths (CFR 4.5%). Two health districts in Zinder region crossed the alert threshold: Dungass with an attack rate (AR) of 4.5 cases per 100 000 inhabitants and Magaria with an attack rate (AR) of 4.8 cases per 100 000 inhabitants. An analysis of data by sub-districts indicates that some health areas crossed the epidemic threshold on week 49 of 2021 (ending 12 December). Neisseria meningitidis serogroup C (NmC) is the predominant germ identified in the 2 health districts. A request to the International Coordinating Group (ICG) for vaccine provision is underway for a vaccine campaign response.

Four cases of circulating vaccine-derived poliovirus type 2 (cVDPV2) were reported this week; one in Maradi and three in Tillaberi bringing the number of cases in 2022 to eight. There were 18 cases reported in 2021.

In north-eastern Nigeria, humanitarian needs remain high, with 8.4 million people, including 58% children (4.9 million), requiring humanitarian assistance in 2022. A total of 2.1 million internally displaced persons (IDPs) remain displaced in the three north-eastern states of Borno, Adamawa, and Yobe due to the ongoing conflict. Over 360 000 persons are displaced in three States, with Katsina (173 856) having the highest number of IDPs, followed by Zamfara (123 102) the epicentre of the banditry attacks. Over 81% of the IDPs reside in host communities, while the rest are living in camp like settings.

The first case of COVID-19 was first detected in Nigeria on 27 February 2020. As of 15 July 2022, a total of 259 007 confirmed cases with 250 485 recovered and 3 144 deaths have been reported.

Lassa fever is an endemic disease in Nigeria. In week 27 of 2022 (ending 10 July), the number of new confirmed cases increased from 9 in week 26 of 2022 to 13 cases, with no deaths. These were reported from Ondo, Edo, Plateau and Anambra States. Cumulatively from week 1 to 27 of 2022, a total of 879 cases including 842 confirmed, 37 probable and 160 deaths among confirmed cases have been reported with a case fatality rate (CFR) of 19.0% across 24 states. In total, 5 649 cases are suspected in 2022. Of all confirmed cases, 69% are from Ondo (30%), Edo (25%), and Bauchi (14%) States.

From 1 January to 26 June 2022, Nigeria has reported 204 suspected cases with one death from 16 states across the country. Of these, 62 cases were laboratory confirmed from the following states: Lagos, Adamawa, Bayelsa, Delta, Edo, Rivers, Cross River, FCT, Kano, Imo, Plateau, Nasarawa, Niger, Oyo, Ondo and Ogun. One death was recorded in a 40-year-old male with renal co-morbidity.

In 2022, 20 cVDPV2 cases have been reported in the country. There were 415 cVDPV2 cases and 18 environmental samples reported in 2021.

From January to December 2021, a total of 25 yellow fever cases including 22 confirmed and 3 probable cases were reported in Nigeria. From 1 January to 31 May 2022, a total of 814 suspected cases have been reported from 36 states in 345 Local Government Areas. Of these suspected cases reported in 2022, none have been confirmed.

The Rwanda Ministry of Health announced the confirmation of the first COVID-19 case on 14 March 2020. As of 16 July 2022, a total of 131 895 cases with 1 465 deaths and 129 613 recovered cases have been reported in the country.

On 6 April 2020, the Ministry of Health of Sao Tome and Principe reported the country's first case of COVID-19. As of 10 July 2022, a total of 6 079 confirmed cases of COVID-19 have been reported, including 74 deaths. A total of 5 990 cases have been reported as recoveries.
**Health Emergency Information and Risk Assessment**

---

**Sao Tome And Principe**

Dengue - Grade 2 - 11-Apr-22 to 15-Apr-2022

- From March 2020 to 17 July 2022, a total of 86 791 confirmed cases of COVID-19 including 1 968 deaths and 84 603 recoveries have been reported in Sao Tome and Principe.

**Senegal**

COVID-19 - Grade 3 - 14-Mar-20 to 14-Mar-2022

- From epidemic week 1 to 23 of 2022 (ending 12 June), 212 confirmed cases of measles were recorded in 37 districts of Senegal, with 16 districts having crossed the epidemic threshold. Of the reported cases, 116 (54.7%) are females; the most affected age group is 1-5 years with 109 cases (51.4%) of which 91.7% were not vaccinated against measles.

**Sierra Leone**

- Anthrax - Ungraded - 20-May-22 to 20-May-2022

- Measles - Ungraded - 1-Nov-21 to 1-Jan-22

- Polioviruses (cVDPV2) - Grade 2 - 10-Dec-2020 to 10-Dec-2020

- Lassa fever - Ungraded - 12-Feb-21 to 12-Feb-21

- Monkeypox - Ungraded - 6-Jul-22 to 6-Jul-22

---

**Senegal**

Measles - Ungraded - 4-Jul-22 to 1-Jan-22

- By 11 May 2022 (Week 19), 12 out of 16 districts reported 379 confirmed measles cases (106 lab confirmed and 273 epi linked; 64% (208) of these cases are below five years, 26.4% (100) above five years and 18.7%, (71) age missing. Currently, three districts (Western Rural, Western Urban and Port Loko District) are experiencing measles outbreak. Surveillance and immunization activities have been intensified in all districts.

**South Africa**

COVID-19 - Grade 3 - 5-Mar-20 to 5-Mar-20

- From early 2021 to 20 March 2022, a total of 20 cases and 11 deaths (55% CFR) have been reported due to Lassa fever in Sierra Leone. Cases were reported from Kenema (15), Kalabahun (3), and Tonkolili (2) districts since the beginning of 2021. From these cases, 65% were females and 35% were <5 years old. From 2016-2020 Sierra Leone experienced gradually declining trends in annual Lassa fever case totals, however, in 2021, cases doubled compared to 2020 (from 8 total reported in 2020 to 16 total reported in 2021).

**South Sudan**

- Drought/famine - Grade 3 - 18-Dec-20 to 18-Dec-20

- Humanitarian crisis - Protracted 3 - 5-Jun-22 to 5-Jun-22

---

The long-standing and complex humanitarian crisis in South Sudan continues. In 2022, there is a total of 8.9 million people in need of humanitarian assistance and 2.02 million people internally displaced as of 30 April 2022. An estimated 7.7 million people are expected to be food insecure during April-July 2022 with at least 87 000 in IPC Phase 5, 2.5 million people in IPC Phase 4, and 4.8 million IPC Phase 3. Floods caused many people to become internally displaced as well as problems for water, sanitation, and hygiene conditions in formalized camps and informal settlements. Waters have not receded and are expected to worsen by the forthcoming rainy season.
A total of 80 suspected cases have been reported from Gogrial West county of in Warrap state. A total of 8 samples returned positive for bacillus anthracis bacteria. Cases were reported from 13 March - 12 June 2022 from registered hospital patients where the majority of cases have been female (64%).

At the end of week 24 (ending 19 June 2022), 212 cases and 1 death (CFR 0.5%) have been reported from Unity State and Ruweng Administrative Area, however most cases have been reported from the Bentiu IDP camp (177 cases, 85.5% of cumulative total). Two new areas, Roriak and Pariang have reported new cases during week 24. A total of 36 cases have been confirmed positive by RDT for cholera and 15 tested positive by culture at the National Public Health Laboratory in Juba. Females account for 62% of all cases. Rubkona county experienced unprecedented floods in 2021 with flood waters persisting up to the end of the current dry season and the flood surface water is often used for bathing and playing.

On 5 April 2020, the Ministry of Health of South Sudan reported the country's first case of COVID-19. As of 9 July 2022, a total of 17 754 confirmed COVID-19 cases were reported in the country including 138 deaths and 16 536 recovered cases.

The current outbreak in the Bentiu IDP camp is ongoing. As of 12 June 2022, a total of 2 751 cases of hepatitis E including 24 deaths (CFR: 0.9%) have been reported since January 2019. During week 22 (ending 5 June), a total of 45 cases were reported. Approximately 54% of cases are male.

Between weeks 1-20 of 2022 (ending 22 May), 1 117 138 malaria cases including 232 deaths (CFR 0.02%) have been reported in South Sudan. There were 3 counties exceeding third quartile malaria trends for the past five years including Aweil Centre, Torit, and Jur River counties during week 20. In 2021, a total of 3 749 210 malaria cases including 2 963 deaths were reported. Several upsurges occurred in the country in 2021 including the county of Fangak.

A measles outbreak was declared by health authorities of South Sudan on 23 February 2022. As of 12 June 2022, eight counties (of 79 counties nationally) have confirmed measles outbreaks (Gogrial West, Raja, Torit, Mahaj, Tumbara, Aweil East, Aweil Centre, Aweil West) since the beginning of this year. Overall, 535 suspected measles cases and two deaths (CFR 0.3%) have been reported countrywide. A total of 68 samples tested positive for measles IgM out of 231 tested. The numbers of the suspected and confirmed cases have been revised from 681 and 421 to 535 and 68 respectively.

A total of 22 anthrax cases were reported from Karamoja region with Aweil East being the most affected due to factors related to inadequate food access, poor market facilities and markets being located near flood prone areas. In the district, flood surface water is often used for bathing and playing.

As of 9 July 2022, a total of 37 812 confirmed COVID-19 cases with 2754 deaths and 37 268 recovered cases have been reported in the country.

A measles outbreak was declared by health authorities of South Sudan on 23 February 2022. As of 12 June 2022, eight counties (of 79 counties nationally) have confirmed measles outbreaks (Gogrial West, Raja, Torit, Mahaj, Tumbara, Aweil East, Aweil Centre, Aweil West) since the beginning of this year. Overall, 535 suspected measles cases and two deaths (CFR 0.3%) have been reported countrywide. A total of 68 samples tested positive for measles IgM out of 231 tested. The numbers of the suspected and confirmed cases have been revised from 681 and 421 to 535 and 68 respectively.

The Ministry of Health of The United Republic of Tanzania notified WHO on 25 April 2022 of an outbreak of cholera in Kigoma and Katavi Regions. However, the last case was reported in Kigoma Region on 22 May 2022. The outbreak is currently confined to Tanganyika District in Katavi Region. From 14 April to 23 June 2022, 331 cumulative cases and six deaths (CFR 1.8%) have been reported countrywide. A total of 78 samples have been tested among which 40 have been confirmed positive for Vibrio cholerae. About 24.7% of cases reported are aged between 21-30 years.

The Ministry of Health, Community Health, Community Development, Gender, Elderly and Children in Tanzania reported the country's first case of COVID-19 on 16 March 2020. As of 8 July 2022, a total of 37 510 confirmed cases have been reported in Tanzania Mainland including 841 deaths.

On 6 March 2020, the Ministry of Health and Public Hygiene of Togo announced the confirmation of its first case of COVID-19. As of 17 July 2022, a total of 37 812 cases including 2 963 deaths and 37 268 recovered cases have been reported in the country.

The first COVID-19 confirmed case was reported in Uganda on 21 March 2020. As of 15 July 2022, a total of 168 763 confirmed COVID-19 cases with 3 627 deaths were reported. The cumulative number has been revised.

There have been 200 suspected cases reported of yellow fever during 2 January–26 June 2022 in Uganda with no deaths reported. There have been five total samples that tested positive by plaque reduction neutralization test (PRNT) at the Uganda Virus Research Institute (UVRI), however, only one case from Wakiso District was classified as confirmed after thorough investigation. The case, confirmed on 18 Feb, is of an unvaccinated female 49-years-old who has since recovered. Rapid Response Team was activated and deployed in March 2022 to conduct additional investigations and support the affected districts.

A cholera outbreak was declared in Zambia on 3 May 2022. A total of 159 cases have been registered with no deaths as of 13 June 2022. Three districts are affected: Lusaka, Chilanga and Nsama.

The first COVID-19 confirmed case was reported in Zambia on 18 March 2020. As of 17 July 2022, a total of 327,994 confirmed COVID-19 cases were reported in the country including 4,009 deaths and 322,419 recovered cases.

There have been 200 suspected cases reported of yellow fever during 2 January–26 June 2022 in Uganda with no deaths reported. There have been five total samples that tested positive by plaque reduction neutralization test (PRNT) at the Uganda Virus Research Institute (UVRI), however, only one case from Wakiso District was classified as confirmed after thorough investigation. The case, confirmed on 18 Feb, is of an unvaccinated female 49-years-old who has since recovered. Rapid Response Team was activated and deployed in March 2022 to conduct additional investigations and support the affected districts.

Mushindano district in North-western province is currently responding to a measles outbreak among some social-cultural and religious groupings with low immunisation coverages. As of 13 June 2022, 340 measles cases and 3 suspected deaths have been reported. WHO is supporting the Ministry of Health investing other cases with similar symptoms.

On 27 May 2022, a 13-year-old pupil presented with signs and symptoms of difficulty in walking, weakness, and painful knees and ankles. The case was immediately isolated at the school sickbay and later referred to Kasama General Hospital for further management. On 4 June 2022, the school recorded four more new cases presenting with similar signs and symptoms from another grade 8 dorm. By 8 June 2022, the school had a cumulative of nine pupils isolated in the sickbay. There has been a total number of 95 suspected conditions of which 15 stool samples were collected to rule out AFP since 10 June 2022, with a cumulative of 95 recoveries as of 5 July 2022.

The anthrax outbreak is ongoing in Zimbabwe. No new cases were reported in Week 20 of 2022 with the cumulative for the year being 61. The cases were reported by Gokwe North District and Gokwe South District in Midlands Province. This outbreak started in Week 36 of 2019, affecting mainly Buhera and Gokwe North and South districts but a surge in cases started appearing in week 38 when cases were reported in some other areas. The cumulative figures for anthrax are 747 cases and three deaths in 2020 and 306 cases and 0 deaths in 2021.

The first COVID-19 confirmed case was reported in Zimbabwe on 20 March 2020. As of 01 July 2022, a total of 256,083 confirmed COVID-19 cases were reported in the country including 5,566 deaths and 249,862 cases that recovered.

A total of 270 cases have so far been identified since the first rumours surfaced on 10 April 2022 in Mutasa District; 31 are vaccinated against measles, 171 are not vaccinated and 28 have unknown vaccination status; 29 deaths have so far been recorded with a case fatality rate of 12.8%. Of the 29 deaths, 20 were unvaccinated and nine with unknown vaccination status. Zindi clinic has reported 179 cases so far contributing at 66.3% of the total cases reported.

No case of circulating vaccine-derived poliovirus type 2 (cVDPV2) was reported this week. There are 17 cases reported in 2021.

Rains in South Sudan are projected to cause a fourth year of flooding in areas where large swathes of land are still inundated from last rainy season. Unity State is expected have displacement of more than 320,000 people who could experience loss of livelihoods, disease outbreaks and food insecurity. In 2021 the flooding began in May and affected over 835K people in 33 counties. A rapidly worsening situation was noted in October 2021. In May of 2022, measures were being taken by humanitarian actors to avert flooding crises this year by reinforcing peoples' homes and key infrastructure such as latrines and water wells in previously flooded areas.

†Grading is an internal WHO process, based on the Emergency Response Framework. For further information, please see the Emergency Response Framework: http://www.who.int/hac/about/erf/en/.

Data are taken from the most recently available situation reports sent to WHO AFRO. Numbers are subject to change as the situations are dynamic.
