This bibliography of work published by the World Health Organization from 1958 to the end of 1962 is the first of a planned series of quinquennial supplements to the bibliography covering the years 1947-1957. It includes the following:

1. All articles published in the *Bulletin of the World Health Organization*, vol. 18-27;
2. Articles published in the *Chronicle of the World Health Organization* (title changed in 1959 to *WHO Chronicle*), vol. 12-16, on matters not more fully covered in other WHO publications;
4. Articles and statistics (other than regularly recurring features) published in the *Epidemiological and Vital Statistics Report*, vol. 11-15;
5. All numbers of the *World Health Organization: Technical Report Series* from No. 142 to No. 249, including important annexes;
6. All numbers of the *Official Records of the World Health Organization* from No. 82 to No. 121, including important annexes;
7. All numbers of the *World Health Organization: Monograph Series* from No. 37 to No. 48, including the chapters contributed by individual authors in symposia and other collected works;
8. All numbers of the *Public Health Papers* from No. 1 to No. 16, including the chapters contributed by individual authors in symposia and other collected works;
9. Special articles in and supplements to the *Weekly Epidemiological Record*, vol. 33-37;
10. All numbers of the *Annual Epidemiological and Vital Statistics*, 1955-1959;
11. Occasional publications, such as *Diagnosis and Treatment of Acute Radiation Injury*, *Specifications for Pesticides*, *World Directory of Dental Schools*, etc.

---

It should be noted that this bibliography does not include WHO mimeographed documents, which are issued in limited numbers as working papers and are not available for general distribution, and many of which have appeared in printed form in the publications listed above.

The following short account of the principal features of WHO publications is intended to guide the reader in his use of the bibliography.

The *WHO Chronicle*, published monthly, is intended to keep physicians and public health workers informed of activities in public health undertaken under the auspices, or with the participation, of WHO. It contains accounts of programmes for the control of various diseases, and of work done in the laboratory, in the clinic, or in the field, as well as reviews of all the Organization's technical publications.

The *Bulletin of the World Health Organization* is the scientific journal of WHO. It contains technical articles reporting the results of laboratory, clinical or field investigations of international significance on subjects within the wide scope of WHO's interest and activities. Since 1952 two volumes of the *Bulletin* have been published annually, each volume consisting of six numbers.

The *International Digest of Health Legislation*, published quarterly, is the only periodical devoted solely to the publication of health legislation of international significance. It contains a selection of health legislation reproduced in full, published in extract form, summarized, or mentioned by title. In addition, comparative studies of legislation on special subjects are published occasionally.

The epidemiological and statistical periodicals—the *Weekly Epidemiological Record*, the monthly *Epidemiological and Vital Statistics Report*, and the *Annual Epidemiological and Vital Statistics*—form part of the worldwide system of reporting inherited from the predecessors of the World Health Organization. The *Weekly Epidemiological Record* contains data on the notification of quarantinable diseases and information on the application of international sanitary legislation. The *Epidemiological and Vital Statistics Report* contains statistics on notifiable diseases and on general mortality, infant mortality and natality in various countries and in the larger towns, and on other mortality and morbidity data of particular importance to the work of WHO. The *Annual Epidemiological and Vital Statistics* covers vital statistics and causes of death, cases of and deaths from notifiable diseases, and statistics of health personnel, hospital establishments and vaccinations.

The Organization also issues four series of which the numbers appear at irregular intervals. The *Official Records of the World Health Organization* include both the proceedings of organizational meetings (the World Health Assembly and the Executive Board) and the documents—notably the Annual Report of the Director-General and the annual Programme and Budget Estimates—which provide the most important items for discussion.
at those meetings. It also contains the reports on the world health situation, the first of which (No. 94 in the series) covers the period 1954-1956.

The World Health Organization: Technical Report Series is the vehicle for collective reports by international groups of experts. It includes reports of WHO expert committees and their subcommittees, joint committees with other specialized agencies, study and advisory groups, technical conferences, and similar bodies.

A new series, Public Health Papers, was begun in 1959 as a medium for the publication of papers that had usually been prepared as contributions to the study by WHO of a particular health question and that had been considered to be of interest to a wider circle of readers.

The World Health Organization: Monograph Series contains systematic, comprehensive, and definitive treatises on a single subject or a group of kindred subjects. Essentially, they are textbooks for the post-graduate worker. Not only do they deal with well-known facts and recent advances, but they also point the way to future developments.

Arrangement

The bibliography consists of four parts:

(1) technical articles and publications grouped in alphabetical order by subject, the subject headings being based upon those used in Index Medicus;

(2) administrative and general articles and publications arranged alphabetically under broad subject headings;

(3) an index of authors;

(4) an index of countries.

The work is completed by check-lists of the titles in the various series published by WHO.

The entries are arranged alphabetically by author within each subject heading, unsigned articles and publications being arranged alphabetically by title (excluding the definite article, prepositions, etc.). It should be noted that in the case of Russian authors the Cyrillic characters have been transliterated in accordance with United Nations practice as laid down in its Terminology Bulletin No. 118.*

The entries for periodical references contain the following elements: family name(s) of author(s), followed by initial(s); title of article; title of periodical, abbreviated according to the recommendations of the International Organization for Standardization, in italics; year of publication; volume number, in bold type; and first and last page numbers. In the case of separately issued publications, the following information is given:

* Since 1963 the international system of transliteration of the International Organization for Standardization—set out in Recommendation ISO/R9—has been used in all WHO publications.
family name(s) of author(s), followed by initial(s); title of work, in italics; edition, when necessary; year of publication; number of pages; and title of series, if any, in italics, followed by publication number. The publisher is the World Health Organization, and the place of publication Geneva, Switzerland.

Each reference is assigned a serial number, printed in bold type for the first entry of each reference and in light type between square brackets for any subsequent entries of the same reference. The indexes of authors and countries refer to this serial number.

LANGUAGE OF PUBLICATION

During the years 1958-1962 WHO publications were published in the following languages:

- Annual Epidemiological and Vital Statistics
- Bulletin of the World Health Organization: English/French
- Epidemiological and Vital Statistics Report: English/French
- International Digest of Health Legislation: English, French
- Official Records of the World Health Organization: English, French, Russian (1961- ), Spanish
- Public Health Papers: English, French, Russian (1961- ), Spanish
- Weekly Epidemiological Record: English/French
- WHO Chronicle: Chinese, English, French, Russian, Spanish
- World Health Organization: Monograph Series: English, French, Russian (1961- ), Spanish

Publications that are not part of a series are published in English and French; some are also published in Russian and/or Spanish.

Occasional exceptions to the above are shown by the letters E. or F. following the bibliographical reference, indicating that the publication exists in English or French only.
