INTRODUCTION

This bibliography covers the work published by the World Health Organization from 1963 to the end of 1967, and continues two earlier bibliographies, the first covering 1947-1957¹ and the second 1958-1962.² It is intended to issue further volumes every five years. The present bibliography includes the following:

- (1) All articles published in the *Bulletin of the World Health Organization*, vol. 28-37;
- (2) Articles published in the *WHO Chronicle*, vol. 17-21, on matters not more fully covered in other WHO publications;
- (3) Survey articles published in the *International Digest of Health Legislation*, vol. 14-18;
- (4) Articles and statistics (other than regularly recurring features) published in the *Epidemiological and Vital Statistics Report*, vol. 16-20;
- (5) All numbers of the *World Health Organization: Technical Report Series* from No. 250 to No. 380, including important annexes;
- (6) All numbers of the *Official Records of the World Health Organization* from No. 122 to No. 163, including important annexes;
- (7) All numbers of the *World Health Organization: Monograph Series* from No. 49 to No. 55, including the chapters contributed by individual authors in symposia and other collected works;
- (8) All numbers of the *Public Health Papers* from No. 17 to No. 32, including the chapters contributed by individual authors in symposia and other collected works;
- (9) The *Annual Epidemiological and Vital Statistics* for 1960 and 1961, and, under its new title *World Health Statistics Annual*, the volumes for 1962, 1963, and the first part for 1964;
- (10) Occasional publications, such as *Bibliography of Hookworm Disease (Ancylostomiasis)*, *Specifications for the Quality Control of Pharmaceutical Preparations*, *World Directory of Post-Basic and Post-Graduate Schools of Nursing*, etc.

It should be noted that this bibliography does not include internally produced WHO documents, which are issued in limited numbers as working

papers and are not available for general distribution. Many of these have, however, been revised and issued in printed form in the publications listed above.

The following short account of the principal features of WHO publications is intended to guide the reader in his use of the bibliography.

The *WHO Chronicle*, published monthly, is intended to keep physicians and public health workers informed of activities in public health undertaken under the auspices, or with the participation, of WHO. It contains accounts of programmes for the control of various diseases, and of work done in the laboratory, in the clinic, or in the field, as well as reviews of all the Organization's technical publications.

The *Bulletin of the World Health Organization* is the scientific journal of WHO. It contains technical articles reporting the results of laboratory, clinical or field investigations of international significance on subjects within the wide scope of WHO's interest and activities. Since 1952 two volumes of the *Bulletin* have been published annually, each volume consisting of six numbers.

The *International Digest of Health Legislation*, published quarterly, is the only periodical devoted solely to the publication of health legislation of international significance. It contains a selection of health legislation reproduced in full, published in extract form, summarized, or mentioned by title. In addition, comparative studies of legislation on special subjects are published occasionally.

The epidemiological and statistical periodicals — the *Weekly Epidemiological Record*, the monthly *Epidemiological and Vital Statistics Report*, and the *World Health Statistics Annual* — form part of the world-wide system of reporting inherited from the predecessors of the World Health Organization. The *Weekly Epidemiological Record* contains data on the notification of quarantinable diseases and information on the application of international sanitary legislation. Notes, based on current statistical data, on the incidence of certain non-quarantinable diseases are also included whenever their prevalence becomes of international importance. The *Epidemiological and Vital Statistics Report* contains statistics on notifiable diseases and on general mortality, infant mortality and natality in various countries and in the larger towns, and on other mortality and morbidity data of particular importance to the work of WHO. The *World Health Statistics Annual*, now issued as three separate parts, deals, in volume I, with information on vital statistics and causes of death, in volume II with infectious diseases (cases, deaths and vaccinations), and in volume III with health personnel and hospital establishments.

The Organization also issues four series of which the numbers appear at irregular intervals. The *Official Records of the World Health Organization* include both the proceedings of organizational meetings (the World Health Assembly and the Executive Board) and the documents—notably the Annual Report of the Director-General and the annual Programme and Budget Estimates—that provide the most important items for discussion

at those meetings. It also contains the quadrennial reports on the world health situation.

The *World Health Organization: Technical Report Series* is the vehicle for collective reports by international groups of experts. It includes reports of WHO expert committees and their subcommittees; joint committees with other specialized agencies, study groups and scientific groups, and similar bodies.

The series entitled *Public Health Papers* serves as a medium for the publication of papers that have usually been prepared as contributions to the study by WHO of a particular health question and are considered to be of interest to a wider circle of readers.

The *World Health Organization: Monograph Series* contains technical guides and treatises on a single subject or a group of kindred subjects. Essentially, they are textbooks for the postgraduate worker.

Arrangement

The bibliography consists of four parts:

- (1) technical articles and publications grouped in alphabetical order by subject, the subject headings being based upon those used in *Index Medicus*;
- (2) administrative and general articles and publications arranged alphabetically under broad subject headings;
- (3) an index of authors;
- (4) an index of countries.

The work is completed by check-lists of the titles in the various series published by WHO.

The entries are arranged alphabetically by author within each subject heading, unsigned articles and publications being arranged alphabetically by title (excluding the definite article, prepositions, etc.). It should be noted that in the case of Russian authors the Cyrillic characters have been transliterated in accordance with the international system of transliteration of the International Organization for Standardization.

The entries for periodical references contain the following elements: family name(s) of author(s), followed by initial(s); title of article; title of periodical, abbreviated according to the recommendations of the International Organization for Standardization, in italics; year of publication; volume number, in bold type; and first and last page numbers. In the case of separately issued publications, the following information is given: family name(s) of author(s), followed by initial(s); title of work, in italics; edition, when necessary; year of publication; number of pages; and title of series, if any, in italics, followed by publication number. The publisher is the World Health Organization, and the place of publication Geneva, Switzerland.

Each reference is assigned a serial number, printed in bold type for the first entry of each reference and in light type between square brackets for any subsequent entries of the same reference. The indexes of authors and countries refer to the corresponding serial numbers.

LANGUAGE OF PUBLICATION

During the years 1963-1967 WHO publications were published in the following languages:

<i>Bulletin of the World Health Organization</i>	Articles in English or French, with a summary in the other language; since 1964, vol. 30, completely translated into Russian
<i>Epidemiological and Vital Statistics Report</i>	English/French
<i>International Digest of Health Legislation</i>	English, French
<i>Official Records of the World Health Organization</i>	English, French, Russian, Spanish
<i>Public Health Papers</i>	English, French, Russian, Spanish
<i>Weekly Epidemiological Record</i>	English/French
<i>WHO Chronicle</i>	Chinese, English, French, Russian, Spanish
<i>World Health Organization : Monograph Series</i>	English, French, Russian, Spanish
<i>World Health Organization : Technical Report Series</i>	English, French, Russian, Spanish
<i>World Health Statistics Annual</i>	English/French, Russian

Publications that are not part of a series are published in English and French; some are also published in Russian and/or Spanish.

Occasional exceptions to the above are shown by the letters E. or F. following the bibliographical reference, indicating that the publication exists in English or French only.
